Coping With Loss Susan Nolen-Hoeksema,Judith Larson,Judith M. Larson,2013-01-11 Coping With Loss describes the many ways in which people cope with the death of someone they love Most earlier books on bereavement have fallen into two categories distillations of the clinical experience of individual therapists or collections of chapters reporting the results of empirical studies Each category is valuable but has tended to serve a narrow group of readers practitioners with particular theoretical orientations or researchers in quest of the latest findings Coauthored by a leading research psychologist and an experienced therapist who specializes in bereavement education and intervention this book is different The authors weave

together the strands of theory research and clinical wisdom into a seamless and readable narrative While they discuss previous work they also present new data never before published from one of the largest studies of bereaved people ever conducted the Bereavement Coping Project Unlike most studies to date which focused on only one type of bereaved group usually widows or widowers the Bereavement Coping Project examined the experiences of several different groups during the first 18 months after the death The groups included those who had lost a spouse a parent an adult sibling or a child and those who had lost their significant other to cancer or cardiovascular disease on one hand as opposed to the stigmatized disease of AIDS on the other The book begins with a critical overview of theories of bereavement succeeding chapters explore in depth the impact of specific types of loss the impact of particular coping strategies on recovery the impact of social supports and religion and the special cases of children and of people who seem to grow and change for the better after a loss A final chapter considers implications for intervention with bereaved people Each chapter is richly illuminated with real life examples throughout and ends with a section called Voices in which bereaved people describe their various attempts to cope in their own words Insightful and informative Helping Schoolchildren Cope with Anger Jim Larson, John E.

emotion regulation e.g. concerning the relationship between the continuum of reinterpretation and experienced emotions The Coping Circumplex Model A Theoretical Synthesis of Coping Constructs and Its Empirical Verification can be useful for psychology academics interested in coping and stress research emotion regulation personality psychology for researchers in fields close to psychology such as medicine or sociology as well as for undergraduate and postgraduate psychology students

Handbook of Coping Moshe Zeidner, Norman S. Endler, 1995-12-12 how a man rallies to life's challenges and weathers its storms tells everything of who he is and all that he is likely to become St Augustine It has long been understood that how a person adjusts to life stresses is a major component of his or her ability to lead a fulfilling life Yet it wasn't until the 1960s that coping became a discrete topic of psychological inquiry Since then coping has risen to a position of prominence in the modern psychological discourse especially within the personality cognitive and behavioral spheres and within the past decade alone many important discoveries have been made about its mechanisms and functioning and its role in ongoing psychological and physical health and well being A book whose time has come at last the Handbook of Coping is the first professional reference devoted exclusively to the psychology of coping Reporting the observations and insights of nearly sixty leading authorities in stress and coping from a wide range of affiliations and schools of thought it brings readers the state of the art in coping theory research assessment and applications In orchestrating the book the editors have scrupulously avoided imposing any particular slant or point of view other than the need to foster greater eclecticism and cooperation

between researchers and clinicians concerned with the phenomenon of coping The Handbook of Coping is divided into five overlapping parts the first of which serves to lay the conceptual foundations of all that follows It traces the history of coping from its origins in psychoanalytic theories of unconscious defense mechanisms and provides an exhaustive review of the latest conceptualizations models and constructs The following section provides an in depth exploration of current research methodology measurement and assessment tools Part Three explores key facets of coping in a broad range of specific domains including everyday hassles chronic disease cataclysmic events and many others The penultimate section focuses on individual differences Among important topics covered here are coping styles and dispositions the role of family social support and education and coping behaviors across the life span The final section Part Five is devoted to current applications Clinical parameters are defined and a number of specific interventions are described as are proven techniques for helping clients to improve their coping skills A comprehensive guide to contemporary coping theory research and applications the Handbook of Coping is an indispensable resource for practitioners researchers students and educators in psychology the health sciences and epidemiology Of related interest EGO DEFENSES Theory and Measurement Edited by Hope R Conte and Robert Plutchik This book explores the nature and manifestations of defense mechanisms and traces ego defense theory and research from Freud s initial conceptualization through recent work in object relations theory and other psychoanalytically oriented approaches It provides clinical guidelines for diagnosing assessing and dealing with defenses reviews empirical research techniques and indicates their value in development and in psychotherapy This volume should be of value to theoreticians clinicians and researchers interested in finding appropriate tools for measurement of defense mechanisms 1994 SOCIAL SUPPORT An Interactional View Edited by Barbara R Sarason Irwin G Sarason and Gregory R Pierce The study of social support and its relationship to personality health and adjustment is one of the fastest growing areas of research and application in psychology This book contains integrative surveys of clinical and field studies experimental investigations and life span explorations It approaches social support as an important facet of interpersonal relationships and shows its undesirable as well as its positive features 1990 0 471 60624 3 528 pp Self-related Cognitions in Anxiety and Motivation R. Schwarzer, 2013-08-21 Research on anxiety and motivation has witnessed substantial progress in recent years in developing innovative perspectives and applying advanced psychometric tools The most important contributions were made by cognitively oriented psychologists who have related the information processing view to anxiety and motivation The organized knowledge about oneself and the storage processing and retrieval of information concerned with one s attitude and behavior strongly influences the way people think feel and act Therefore self referent thoughts play a major role as a cognitive component in anxiety and motivation It is the idea of this book to integrate different lines of thinking in the field of anxiety and motivation by relating both topics to self focussed attention self concept and self evaluation in achievement contexts as well as in social contexts **Operating Successfully in China - Strategies to Cope with Uncertainty** Daniel
