lens of AI and machine learning **Unravelling Cancer Signaling Pathways: A Multidisciplinary Approach** Kakoli Bose, Pradip Chaudhari, 2019-11-25 Unravelling the intricate cell signalling networks and their significance in cancer poses a major intellectual challenge. Keeping this in mind, the book aims at understanding the mechanism of action of different proteins and their complexes in the cancer signalling pathways. Hence, the proposed book, which comprises 20 chapters, provides a comprehensive introduction on cell signalling, its alterations in cancer molecules that have been popular targets as well as the ones that are emerging as targets. In addition, it discusses different forms of therapy that are coming up for its treatment. Other than that, a major portion of the book is focused on studying different disciplines at the interface of biology and other areas of science that are being used to understand cancer biology in depth.

Rare Endocrine Tumors Barbara Altieri, Antongiulio Faggiano, Enzo Lalli, 2022-07-27 *Principles & Practice of Neuro-Oncology*, 2010-10-21 Neuro-oncologic brain and spine cancers account for 19 000 new cases and 13 000 deaths per year. The early and proper diagnosis of these virulent cancers is critical to patient outcomes, and diagnosis and treatment strategies are continually evolving. The multidisciplinary team that manages these patients involves medical and radiation oncology, neurosurgery, neuroimaging, nurses, and therapists. *Principles and Practices of Neuro Oncology* establishes a new gold standard in care through a comprehensive multidisciplinary text covering all aspects of neuro oncology. Six major sections cover all topics related to epidemiology and etiology, molecular biology, clinical features, and supportive care, imaging, neuroanatomy, and neurosurgery, medical oncology, and targeted therapies, and radiation oncology for adult and pediatric cancers. Expert contributors from multiple disciplines provide detailed and in-depth discussions of the entire field of neuro oncology, including histopathologic harmonization, neurosurgical techniques, quality of life, and cognitive functions, and therapeutic changes in terms of combined modality treatments, advanced radiation techniques, the advent of new drugs, especially targeted agents, and the tantalizing early promise of personalized therapeutic approaches. With contributions from over 180 authors, numerous diagrams, illustrations, and tables, and a 48-page color section, *Principles and Practice of Neuro Oncology* reflects the breadth and depth of this multi-faceted specialty.

Schelbert, 2008-11-23 Since 1999-2000, simultaneous imaging of anatomical features and metabolic activities using fused PET and CT images has complemented and in many cases even replaced what was originally done as separate analysis. It also refers to publications from Europe, the USA, and Asia, as well as numerous studies.

The Impact of Tumor Biology on Cancer Treatment and Multidisciplinary Strategies Michael Molls, Peter Vaupel, Carsten Nieder, Mitchell Steven Anscher, 2009-03-25 The rapidly changing concepts in radiation oncology, with the development of more precise instrumentation for delivery of radiation therapy and a greater emphasis on hypofractionation technologies, require a very intimate knowledge of tumor biology and the influence of various biologic factors on dose distribution within

the tumor in terms of homogeneity as well as prevention of any late effects on normal tissue surrounding the tumor itself. Not only are these major factors in clinical practice but also the known factors of inhomogeneity of cancer cells, the impact of microenvironment in terms of radiation effect and host factors make it mandatory to design therapeutic strategies to improve the outcome and to diminish any potential short term or long term risks from the radiation therapy. The authors have developed an outstanding text that deals with these strategies and how they would impact on established and emerging new technologies and treatment. The context of the presentations within a multidisciplinary combined modality therapy program is incredibly important. In this volume various topics are reviewed including tumor genesis, cell proliferation, angiogenesis, the physiologic characteristics of malignant tissues, invasion and adhesion, the route and role pursued in the development of metastasis and the role of the human immune system in cancer prevention and development.
