

6) This problem serves as a “walk-through” on state machine analysis of a sequential circuit. Given the following state association and circuit diagram:

| State | Q1 | Q0 |
|-------|----|----|
| A     | 0  | 0  |
| B     | 1  | 0  |
| C     | 1  | 1  |
| D     | 0  | 1  |

- From the logic circuit, find the expressions for  $J_0$ ,  $K_0$ ,  $J_1$ , and  $K_1$ .
- Use the excitation equation for the JK flip flop and the relationships found in part (a) to derive expressions for  $Q_0^*$  and  $Q_1^*$ . These should be simplified for compatibility with a Mealy machine.
- Write the transition output table (like the vending machine example from lecture on state machines, slide 6)
- Draw the state diagram showing states A, B, C, D and all input/output associated with each state transition.
