On Traditional Japanese Urban Plann:

An Introduction to Japanese City Planning Chin Siong Ho, 2003 **The Making of Urban Japan** André

Sorensen, 2005-08-19 During the twentieth century Japan was transformed from a poor primarily rural country into one of the world's largest industrial powers and most highly urbanised countries Interestingly while Japanese governments and planners borrowed carefully from the planning ideas and methods of many other countries Japanese urban planning urban governance and cities developed very differently from those of other developed countries Japan's distinctive patterns of urbanisation are partly a product of the highly developed urban system urban traditions and material culture of the pre modern period which remained influential until well after the Pacific War A second key influence has been the dominance of central government in urban affairs and its consistent prioritisation of economic growth over the public welfare or urban quality of life Andr Sorensen examines Japan's urban trajectory from the mid nineteenth century to the present paying particular attention to the weak development of Japanese civil society local governments and land development and planning regulations **Learning from the Japanese City** Barrie Shelton, 2012-05-23 Japanese cities are amongst the most

intriguing and confounding anywhere Their structures patterns of building and broader visual characteristics defy conventional urban design theories and the book explores why this is so Like its cities Japan's written language is recognized as one of the most complicated and the book is unique in revealing how the two are closely related Set perceptively against a sweep of ideas drawn from history geography science cultural and design theory Learning from the Japanese City is a highly original exploration of contemporary urbanism that crosses disciplines scales time and space This is a thoroughly revised and much extended version of a book that drew extensive praise in its first edition Most parts have stood the test of time and remain A few are replaced or removed about a hundred figures appear for the first time Most important is an entirely new sixth section This brings together many of the urban characteristics otherwise encountered in fragments through the book in one walkable district of what is arguably Japan's most convenient metropolis Nagoya The interplay between culture built form and cities remains at the heart of this highly readable book while a change in subtitle to Looking East in Urban Design reflects increased emphasis on real places and design implications Urban Planning and Development in China and Other

Japan Philip Shapira, Ian Masser, David W. Edgington, 1994-01-01 This book brings together a series of contributions which examine the processes of contemporary city development and urban planning in Japan A central theme of the book is to consider from a range of perspectives and situations the role policies methods and effectiveness of planning in guiding city development in Japan and in addressing present and emerging urban issues Areas of particular concern include inner city development the urban periphery the institutional and regulatory context of planning and planning for urban and regional economic and technological change In many instances the book draws parallels between Japan s urban experience and planning approach with those of Europe and North America Earlier versions of all but two of the chapters were published in issues of the Town Planning Review but not only does the book have the value of bringing these contributions together in one

volume but it has also allowed the authors to revise and update their work and incorporate new developments. The editors have contributed a substantial reflective introductory chapter and have also included a chronology of Japanese planning legislation and an annotated guide to selected English language literature on Japanese urban and regional planning. While the main aim of the book is to provide a detailed interpretation of current urban planning issues and policies in Japan, the chapters also provide a foundation for understanding how Japanese city planning may evolve in the future. Architecture and Urbanism in Modern Korea Inha Jung, 2013-07-31. Although modernization in Korea started more than a century later than in the West, it has worked as a prominent ideology throughout the past century. In particular, it has brought radical changes in Korean architecture and cities. Traditional structures and ways of life have been thoroughly uprooted in modernity's continuous negation of the past. This book presents a comprehensive overview of architectural development and urbanization in Korea within the broad framework of modernization. Twentieth-century Korean architecture and cities form three distinctive periods. The first, defined as colonial modern, occurred between the early twentieth century and 1945, when Western civilization was transplanted to Korea via Japan, and a modern way of life, albeit distorted, began taking shape. The second is the so-called developmental dictatorship period. Between 1961 and 1988, the explosive growth of urban populations resulted in large-scale construction booms, and architects delved into modern identity through the locality of traditional architecture. The last period began in the mid-1990s and may be defined as one of modernization, settlement, and a transition to globalization. With city populations leveling out, urbanization and architecture came to be viewed from new perspectives. Inha Jung, however, contends that what is more significant is the identification of elements that have remained unchanged. Jung identifies continuities that have been formed by long-standing relationships between humans and their built environment, and despite rapid modernization, are still deeply rooted in the Korean way of life. For this reason, in the twentieth century, regionalism exerted a great influence on Korean architects. Various architectural and urban principles that Koreans developed over a long period while adapting to the natural environment have provided important foundations for architects' works. By exploring these sources, this carefully researched and amply illustrated book makes an original contribution to defining modern identity in Korea's architecture, housing, and urbanism. **Reconstructing Kobe** David W.

Edgington, 2011-01-01. Six thousand people died and hundreds of thousands lost their homes when an earthquake hit Kobe in January 1995. The Hanshin Earthquake was the largest disaster to affect postwar Japan and one of the most destructive postwar natural disasters to strike a developed country. Although the media focused on the disaster's immediate effects, the long-term reconstruction efforts have gone largely unexplored. Based on fieldwork and interviews with planners, activists, and bureaucrats, *Reconstructing Kobe* records the first ten years of reconstruction and recovery and offers detailed descriptions of the geography of crisis and opportunity. Which districts were most vulnerable to the quake and why? Did planners successfully exploit opportunities to revitalize the city and make it more sustainable and disaster-proof? David Edgington's

intricate investigation of one of the largest redevelopments in recent history offers a compelling post disaster case study for planners and policy makers and is essential reading for students and scholars of Japanese urban and planning history
