Formal Methods and Software Engineering Kung-Kiu Lau, Richard Banach, 2005-10-25. This book constitutes the refereed proceedings of the 7th International Conference on Formal Engineering Methods (ICFEM 2005) held in Manchester, UK, in November 2005. The 30 revised full papers presented together with 3 invited contributions were carefully reviewed and selected from 74 submissions. The papers address all current issues in formal methods and their applications in software engineering. They are organized in topical sections on specification, modelling, security, communication, development, testing, verification, and tools.

FME 2003: Formal Methods Keijiro Araki, Stefania Gnesi, Dion Mandrioli, 2003-10-02. This volume contains the proceedings of FM2003, the 12th International Formal Methods Europe Symposium, which was held in Pisa, Italy, on September 8-14, 2003. Formal Methods Europe (FME) www.fmeurope.org is an independent association which aims to stimulate the use of and research on formal methods for system development. FME conferences began with a VDM Europe symposium in 1987. Since then, the meetings have grown and have been held about once every 18 months. Throughout the years, the symposia have been notably successful in bringing together researchers, tool developers, vendors, and users, both from academia and from industry. Unlike previous symposia in the series, FM 2003 was not given a specific theme. Rather, its main goal could be synthesized as widening the scope. Indeed, the organizers aimed at enlarging the audience and impact of the symposium along several directions. Dropping the suffix 'E' from the title of the conference reflects the wish to welcome participation and contribution from every country; also, contributions from outside the traditional Formal Methods community were solicited. The recent innovation of including an Industrial Day as an important part of the symposium shows the strong commitment to involve industrial people more and more within the Formal Methods community. Even the traditional and rather fuzzy borderline between software engineering, formal methods, and methods and formalisms exploited in different fields of engineering was somewhat challenged.

The Old Syriac Inscriptions of Edessa and Osroene Han J.W. Drijvers, John F. Healey, 2016-11-14. This volume contains all the known Old Syriac inscriptions from Edessa and the area around Osroene in Northern Mesopotamia from the first three centuries C.E., the number of which has substantially increased over the last decades. The texts are given in Estrangelo script and are accompanied by an extensive philological and historical commentary. The originals are presented in photographs and line drawings. The volume also contains chapters on the script of these inscriptions, on the language, and on the history and culture of Edessa. Two appendices offer the texts of three parchments written in Syriac and originating from the same area and of known but still unpublished inscriptions. The book concludes with indices of words and proper names, which are complementary to the Dictionary of the North West Semitic Inscriptions (Brill, 1995) and with a full bibliography.

The Qur'an Oliver Leaman, 2006-05-02. A RUSA 2007 Outstanding Reference Title. The Qur'an is the source of inspiration for one of the

world's major religions followed today by over a billion people. It plays a central role in Islam and ever since it appeared fourteen hundred years ago has been the subject of intense debate. Some of this has been carried out by Muslims and some by those hostile or indifferent to Islam producing a very wide range of views. Authored by forty three international experts the objective of *The Qur'an: An Encyclopedia* is to present this diversity of thought approach and school without priority in order to give a strong appreciation of the range of response that the text has provoked throughout its history and providing students and researchers with a powerful one volume resource covering all aspects of the text and its reception. Islam and the Qur'an are much in the news today and there is a public debate going on in which things are said about the Qur'an without much knowledge or understanding of the book. Every effort has been made to help the reader use the Encyclopedia as an investigative tool in Quranic studies. The volume assumes no previous knowledge of the Qur'an, Islam or Arabic. Technical terms are explained in the text itself and the style of each entry is designed to be as self contained as possible. Entries are cross referenced and many include a brief bibliography. At the end of the work there is a substantial annotated bibliography providing a detailed guide to the most significant books, journals and articles in Quranic Studies. There is a full index. The readership will include those seeking basic information on the Qur'an however the substantial number of longer entries means that it will also be used by specialists.

Scripting Computer-Supported Collaborative Learning Frank Fischer, Ingo Kollar, Heinz Mandl, Jörg M. Haake, 2007-04-08

Research on Computer Supported Collaborative Learning (CSCL) is a multidisciplinary field located at the intersection of cognitive psychology, computer science and education. Yet the different epistemological and theoretical backgrounds of these disciplines often make fruitful exchange between them difficult. CSCL urgently needs to develop and use boundary concepts that can bring these fields closer together to improve cumulative research and development of computer supported learning environments. Scripting Computer Supported Collaborative Learning focuses on one term with the potential to become a real boundary concept in CSCL. Scripting Computer Supported Collaborative Learning which has collected advanced script approaches demonstrates the opportunities for using synergy to apply the script concept between perspectives and interdisciplinary CSCL approaches to scripting. This volume represents the state of the art of research on scripting computer supported collaborative learning and provides a starting point for the development of a common understanding of scripting in CSCL. Research on collaboration scripts has an extraordinary potential for advancing the multidisciplinary endeavor of CSCL research and this book provides a rich basis for further exploring and realizing this potential. As such it will be a valuable resource for research, development and teaching.
