Origin of Species Charles Darwin, 2016-11-18 Excerpt from The Foundations of the Origin of Species A Sketch Written in 1842 It is impossible to know how soon the ferment of uniformitarianism began to work but it is fair to suspect that in 1832 he had already begun to see that mutability was the logical conclusion of Lyell's doctrine though this was not acknowledged by Lyell himself There were however other factors of change In his Autobiography he wrote During the voyage of the Beagle I had been deeply impressed by discovering in the Pampean formation great fossil animals covered with armour like that on the existing armadillos secondly by the manner in which closely allied animals replace one another in proceeding southward over the Continent and thirdly by the South American character of most of the productions of the Galapagos archipelago and more especially by the manner in which they differ slightly on each island of the group none of the islands appearing to be very ancient in a geological sense It was evident that such facts as these as well as many others could only be explained on the supposition that species gradually become modified and the subject haunted me About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works Charles Darwin Gavin De Beer, 1963 *The Foundations of the Origin of Species* Charles Darwin, 2015-04-26 The Foundations of the Origin of Species by Charles Darwin **Darwin, evolution, evolutionisms** Ana Leonor Pereira, João Rui Pita, Pedro Ricardo Fonseca, 2011-12-01 H 150 anos mais precisamente em 24 de Novembro de 1859 Darwin deu a conhecer um novo paradigma da história natural através da publicação A Origem das Espécies Como a epistemologia já constatou a teoria darwiniana da descendência com modificações ou teoria da seleção natural levou cerca de 20 anos a ser construída ou seja entre 1837 e 1859 grosso modo Os 150 anos de história do darwinismo e da evolução apresentam a fecundidade da teoria da seleção natural tanto no plano das ciências da vida e do homem como no plano das culturas Tal como em quase todo o mundo também em Portugal a recepção de Darwin iniciou-se nos anos 60 do século XIX apresentando novidades surpreendentes atendendo escala portuguesa Em 2009 o Grupo de História e Sociologia da Ciência do Centro de Estudos Interdisciplinares do Século XX da Universidade de Coimbra organizou o Encontro Internacional Darwin Darwinismos Evolução 1859 2009 Esta reunião científica pretendeu ser um espaço de discussão aberto a todos os interessados neste tema tanto no plano nacional como internacional Os textos agora publicados constituem uma coletânea de muitos textos ampliados e que serviram de bases comunicadas apresentadas 150 years ago on 24th November 1859 Darwin launched a new paradigm of natural history with the publication of his work On the Origin of the Species As epistemology has shown Darwin's theory of descent with modification or the theory of natural selection took some 20 years to develop i.e. between 1837 and 1859 broadly speaking The 150 year history

of Darwinism and evolution show the fecundity of this theory in both the life sciences and culture In Portugal as in much of the rest of the world the reception of Darwin only really got going in the 1960s and took an interesting form In 2009 the History and Sociology of Science group at the Centre for 20th century Interdisciplinary Studies at the University of Coimbra organized the international conference on Darwin Darwinisms Evolution 1859 2009 to provide a forum for anyone interested in the subject both nationally and internationally The texts published here are extended versions of the papers presented at that conference

Darwinian Evolution Antony Flew, Darwinian Evolution is a study of the historical background of Darwin s ideas of their logical structure and of their alleged and actual implications Flew explores the Scottish Enlightenment an important and often neglected aspect of Darwin s intellectual background He compares Darwin with such figures as Adam Smith Thomas Malthus and Karl Marx emphasizing not the similarities but the differences between the natural and social sciences Flew argues that social science must do what natural science does not take account of individual choice

Origins of Darwin's Evolution J. David Archibald, 2017-10-10 Historical biogeography the study of the history of species through both time and place first convinced Charles Darwin of evolution This field was so important to Darwin s initial theories and line of thinking that he said as much in the very first paragraph of *On the Origin of Species* 1859 and later in his autobiography His methods included collecting mammalian fossils in South America clearly related to living forms tracing the geographical distributions of living species across South America and sampling peculiar fauna of the geologically young Gal pagos Archipelago that showed evident affinities to South American forms Over the years Darwin collected other evidence in support of evolution but his historical biogeographical arguments remained paramount so much so that he devotes three full chapters to this topic in *On the Origin of Species* Discussions of Darwin s landmark book too often give scant attention to this wealth of evidence and we still do not fully appreciate its significance in Darwin s thinking In *Origins of Darwin s Evolution* J David Archibald explores this lapse showing how Darwin first came to the conclusion that instead of various centers of creation species had evolved in different regions throughout the world He also shows that Darwin s other early passion geology proved a more elusive corroboration of evolution *On the Origin of Species* has only one chapter dedicated to the rock and fossil record as it then appeared too incomplete for Darwin s evidentiary standards Carefully retracing Darwin s gathering of evidence and the evolution of his thinking *Origins of Darwin s Evolution* achieves a new understanding of how Darwin crafted his transformative theory
