**Theory and Econometrics of Financial Asset Pricing** Kian Guan Lim, 2022-08-22 This book will provide a firm foundation in the understanding of financial economics applied to asset pricing It carries the real world perspective of how the market works including behavioral biases and also wraps that understanding in the context of a rigorous economics framework of investors risk preferences underlying price dynamics rational choice in the large and market equilibrium other than inexplicable irrational bubbles It concentrates on analyses of stock credit and option pricing Existing highly cited finance models in pricing of these assets are covered in detail and theory is accompanied by rigorous applications of econometrics Econometrics contain elucidations of both the statistical theory as well as the practice of data analyses Linear regression methods and some nonlinear methods are also covered The contribution of this book and at the same time its novelty is in employing materials in probability theory economics optimization econometrics and data analyses together to provide a rigorous and sharp intellect for investment and financial decision making Mistakes are often made with far too often sweeping pragmatism without deeply knowing the underpinnings of how the market economics works This book is written at a level that is both academically rigorous for university courses in investment derivatives risk management as well as not too mathematically deep so that finance and banking graduate professionals can have a real journey into the frontier financial economics thinking and rigorous data analytical findings

Derivative Securities and Difference Methods You-lan Zhu, Xiaonan Wu, I-Liang Chern, 2013-03-09 In the past three decades great progress has been made in the theory and practice of financial derivative securities Now huge volumes of financial derivative securities are traded on the market every day This causes a big demand for experts who know how to price financial derivative securities This book is designed as a textbook for graduate students in a mathematical finance program and as a reference book for the people who already work in this field We hope that a person who has studied this book and who knows how to write codes for engineering computation can handle the business of providing efficient derivative pricing codes In order for this book to be used by various people the prerequisites to study the majority of this book are multivariable calculus linear algebra and basic probability and statistics In this book the determination of the prices of financial derivative securities is reduced to solving partial differential

equation problems i.e. a PDE approach is adopted in order to find the price of a derivative security This book is divided into two parts In the first part we discuss how to establish the corresponding partial differential equations and find the final and necessary boundary conditions for a specific derivative product If possible we derive its explicit solution and describe some properties of the solution In many cases no explicit solution has been found so far
