Course of Mathematics Comprising Arithmetic Algebra and Euclid The main purpose of this text book is to provide in a single and inexpensive volume a short course of Arithmetic Algebra and Euclid specially adapted to the needs of a large and increasing class of students namely those who after leaving school desire to continue their study of Elementary Mathematics partly with help derived from evening classes and partly by means of private work at home The majority of such students work under somewhat difficult conditions They have already received a certain training in Arithmetic but their mathematical education has gone no further and the problem which meets them is how with very limited instruction and leisure to maintain what they have already learned and at the same time to acquire from the beginning a sound knowledge of Elementary Algebra and Geometry What is needed by such learners is first of all a course of varied and graduated Exercises in Arithmetic then a careful exposition of the two new subjects Algebra and Euclid arranged and treated in such a way as to smooth the path of a beginner and to encourage him to overcome difficulties by relying on his own industry and intelligence These considerations have been kept in view in compiling the following pages Accordingly the section on Arithmetic is not intended to take the place of an ordinary text book but to supplement lectures and aid in the work of revision About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

*High School Algebra* H. E. Slaught, 2015-06-13 Excerpt from High School Algebra Elementary Course In writing the First Principles of Algebra the authors have had constantly before them two chief aims 1 To provide a gradual and natural introduction to the symbols and processes of algebra 2 To give vital purpose to the study of algebra by using it to do

interesting and valuable things Each of these aims leads to the same order of topics which however differs somewhat from the conventional order If it is admitted that there should be a gradually increasing complexity of forms to be manipulated it follows that factoring and complicated work in fractions have no proper place in the first half year This book is arranged so that factoring may begin with the second semester and complicated fractions may come still later Simple fractions are treated in Chapter V The pupil is introduced to the algebraic notation by recalling and stating in terms of letters certain rules of arithmetic with which he is already familiar The simplicity of the algebraic formulas compared with the arithmetical statement of rules known to the pupil cannot fail to impress him with the usefulness and power of the subject which he is about to study This impression will be deepened when in Chapter VI rules which caused considerable trouble in arithmetic are derived with the utmost ease by algebraic processes The study of equations and their uses is naturally the main topic of the Elementary Course This topic is therefore developed early simple simultaneous equations being completed in Part One which is intended to be covered in the first half year About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
