Algorithmic Properties Of Structures Selected Papers Of E Engeler:

Algorithmic Properties of Structures Erwin Engeler, 1993 The work of Erwin Engeler in the logic and algebra of computer science has been influential but has become difficult to access because it has appeared in different types of publications This collection of selected papers is therefore timely and useful It represents an original and coherent approach to the basic interrelationships between mathematics and computer science The volume begins with the area of enrichment of classical model theory by languages which express properties representing the outcome of hypothetical computer programs executed in a given class of mathematical structures and is related to questions of correctness and provability of programs This point of view allowed the generalization of classical Galois theory to the point of discussing the relation between structure and complexity of solution programs for problems posed in various mathematical theories The algebraic approach is deepened and enlarged in the later papers by showing that the algorithmic aspects of any mathematical structure can be uniformly dealt with by expanding these structures into combinatory algebras

The Combinatory Programme Erwin Engeler, 2012-12-06 Combinatory logic started as a programme in the foundation of mathematics and in an historical context at a time when such endeavours attracted the most gifted among the mathematicians This small volume arose under quite different circumstances namely within the context of reworking the mathematical foundations of computer science I have been very lucky in finding gifted students who agreed to work with me and chose for their Ph D theses subjects that arose from my own attempts 1 to create a coherent mathematical view of these foundations The result of this collaborative work is presented here in the hope that it does justice to the individual contributor and that the reader has a chance of judging the work as a whole E Engeler ETH Zurich April 1994 I Collected in Chapter III An Algebraization of Algorithmics in **Algorithmic Properties of Structures Selected Papers of Erwin Engeler** World Scientific Pub Co Singapore 1993 pp 183-257 I Historical and Philosophical Background Erwin Engeler In the fall of 1928 a young American turned up at the Mathematical Institute of Gottingen a mecca of mathematicians at the time he was a young man with a dream and his name was H B Curry He felt that he had the tools in hand with which to solve the problem of foundations of mathematics mine and for all His was an approach that came to be called formalist and embodied that later became known as Combinatory Logic Subject Guide to
