Firestone, Roberta Y. Schorr, Lora F. Monfils, 2004-04-12 Testing is one of the most controversial of all state and federal educational policies The effects of testing are quite ambiguous The same test may lead to different consequences in different circumstances and teachers may use very different strategies to prepare students for tests Although most experts agree that mandatory testing leads to teaching to the test they disagree about whether it leads to meaningless drill wasted time de professionalizing teachers and demotivating students or to more challenging and thoughtful curricula more engaging teaching increased student motivation and increased accountability To help sort through this ambiguity and provide a firmer basis for decisions The Ambiguity of Teaching to the Test Standards Assessment and Educational Reform offers a hard look at the effects of state testing and thoroughly examines the ambiguity of test preparation and how test preparation practices are influenced by what teachers know and the leadership coming from the school and district Drawing on data from a three year study of New Jersey s testing policy in elementary mathematics and science it helps to explain the variety of ways that teachers modify their teaching in response to state tests raises important questions and offers useful guidance on how state policymakers and local and district school administrators can implement policies that will improve educational equity and performance for all students It also offers an in depth analysis of classroom practices that should inform teachers and teacher educators whose goal is to meaningfully implement conceptually based teaching practices This comprehensive look at the statewide variation in testing practice features a data based non ideological treatment of how testing affects teachers in a field characterized by ideologically driven beliefs and by anecdotes an extensive and well integrated combination of qualitative and quantitative data sources that provide a statewide overview as well as an in depth analysis of teachers and classrooms a careful analysis of the variety of forms of teaching to the test and a multilevel exploration of how a variety of personal and leadership factors can influence teaching to the test This is an important book for researchers professionals and students in educational testing educational policy educational administration mathematics and science education educational

Shingareva,Carlos Lizárraga-Celaya,2009-08-14 In the history of mathematics there are many situations in which calculations were performed incorrectly for important practical applications Let us look at some examples the history of computing the number began in Egypt and Babylon about 2000 years BC since then many mathematicians have calculated e g Archimedes Ptolemy Vi ete etc The first formula for computing decimal digits of e was discovered by J Machin in 1706 who was the first to correctly compute 100 digits of Then many people used his method e g W Shanks calculated with 707 digits within 15 years although due to mistakes only the first 527 were correct For the next examples we can mention the history of computing the ne structure constant that was first discovered by A Sommerfeld and the mathematical tables exact lutions and formulas published in many mathematical textbooks were not verified rigorously 25 These errors could have a large effect on results obtained by engineers But sometimes the solution of such problems required such technology that was not available at that time In modern mathematics there exist computers that can perform various mathematical operations for which humans are incapable Therefore the computers can be used to verify the results obtained by humans to discovery new results to prove the results that a human can obtain without any technology With respect to our example of computing we can mention that recently in 2002 Y Kanada Y Ushiro H Kuroda and M **Combinatorial Algebraic Geometry** Gregory G. , 1958 **Developing Heritage - Developing Countries** Marie Huber, 2020-11-23 The history of development has paid only little attention to cultural projects This book looks at the development politics that shaped the UNESCO World Heritage programme with a case study of Ethiopian World Heritage sites from the 1960s to the 1980s In a large scale conservation and tourism planning project selected sites were set up and promoted as images of the Ethiopian nation This story serves to illustrate UNESCO's role in constructing a useful past in many African countries engaged in the process of nation building UNESCO experts and Ethiopian elites had a shared interest in producing a portfolio of antiquities and national parks to underwrite Ethiopia's imperial claims to regional hegemony with ancient history The key findings of this book highlight a continuity in Ethiopian history despite the political ruptures caused by the 1974 revolution and UNESCO's transformation from knowledge producer to actual provider of development policies The particular focus on the bureaucratic and political practices of heritage bridges a gap between cultural heritage studies and the history of international organisations The result is a first study of the global discourse on heritage as it emerged in the 1960s development decade **Reintegrative Justice**

in Practice Helen Miles, Peter Raynor, 2016-04-08 Recent years have seen the development of a growing international literature on restorative justice community justice and reintegrative alternatives to formal criminal justice processes This literature is stronger on theory and advocacy than on detailed evaluative studies It often relies for its practical examples on the presumed historical practices of the indigenous peoples of colonised territories or on attempts to revive or promote modified versions of these in a modern context which has led to debates about how far modern communities can provide a viable setting for such initiatives This book provides a unique study of the practice of traditional reintegrative community justice in a European society the Parish Hall Enquiry PHE in the Channel Island of Jersey This is an ancient institution based on an informal hearing and discussion of a reported offence with the alleged offender and other interested parties carried out by centeniers honorary police officers elected to one of Jersey's twelve parishes It is still in regular use as an integral part of a modern criminal justice system and it usually aims to resolve offences without recourse to formal prosecution in court Helen Miles and Peter Raynor's research arising from direct observation contributes to the literature on what works in resolving conflicts and influencing offenders and their detailed case studies of how problems are addressed gives a hands on

flavour of the process The authors also document the aspects of community life in Jersey that facilitate or hinder the continuation of the PHEs drawing out the implications of these findings for wider debates about the necessary and sufficient social conditions for reintegrative justice to succeed
