

# Introduction to Algae:

The term algae (*Latin – seaweeds*) was first introduced by Linnaeus in 1753, meaning the Hepaticae. The algae comprise of a large heterogeneous assemblage of plants which are diverse in habitat, size, organisation, physiology, biochemistry, and reproduction.

It is an important group of **Thallophyta** (*Gr: Thallo – a sprout; phyton – a plant*), the primitive and simplest division of the plant kingdom. The orderly systematic study of algae is called **Phycology** (*Gr. phycos – seaweeds; logos – study or discourse*).

The algae are chlorophyll-containing primitive plants, both **prokaryotic and eukaryotic**, with wide range, starting from unicellular to multicellular organisations and **Autophytic** (which can manufacture their own food).
