Visualization of Time-Oriented Data Wolfgang Aigner, Silvia Miksch, Heidrun Schumann, Christian Tominski, 2011-05-30 Time is an exceptional dimension that is common to many application domains such as medicine engineering business or science Due to the distinct characteristics of time appropriate visual and analytical methods are required to explore and analyze them This book starts with an introduction to visualization and historical examples of visual representations At its core the book presents and discusses a systematic view of the visualization of time oriented data along three key questions what is being visualized data why something is visualized user tasks and how it is presented visual representation To support visual exploration interaction techniques and analytical methods are required that are discussed in separate chapters A large part of this book is devoted to a structured survey of 101 different visualization techniques as a reference for scientists conducting related research as well as for practitioners seeking information on how their time oriented data can best be visualized

Many-Criteria Optimization and Decision Analysis Dima Brockhoff, Michael Emmerich, Boris Naujoks, Robin Purshouse, 2023-07-28 This book presents the state of the art current challenges and future perspectives for the field of many criteria optimization and decision analysis The field recognizes that real life problems often involve trying to balance a multiplicity of considerations simultaneously such as performance cost risk sustainability and quality The field develops theory methods and tools that can

support decision makers in finding appropriate solutions when faced with many typically more than three such criteria at the same time. The book consists of two parts: key research topics and emerging topics. Part I begins with a general introduction to many criteria optimization perspectives from research leaders in real world problems and a contemporary survey of the attributes of problems of this kind. This part continues with chapters on fundamental aspects of many criteria optimization, namely on order relations, quality measures, benchmarking, visualization, and theoretical considerations. Part II offers more specialized chapters on correlated objectives, heterogeneous objectives, Bayesian optimization, and game theory. Written by leading experts across the field of many criteria optimization, this book will be an essential resource for researchers in the fields of evolutionary computing, operations research, multiobjective optimization, and decision science.

A Framework for Visualizing Information E.H. Chi, 2013-03-14. Fundamental solutions in understanding information have been elusive for a long time. The field of Artificial Intelligence has proposed the Turing Test as a way to test for the smart behaviors of computer programs that exhibit human-like qualities. Equivalent to the Turing Test for the field of Human Information Interaction (HII) is getting information to the people that need them and helping them to understand the information; this is the new challenge of the Web era. In a short amount of time, the infrastructure of the Web became ubiquitous, not just in terms of protocols and transcontinental cables but also in terms of everyday devices capable of recalling network-stored data, sometimes wirelessly. Therefore, as these infrastructures become reality, our attention on HII issues needs to shift from information access to information sensemaking, a relatively new term coined to describe the process of digesting information and understanding its structure and intricacies so as to make decisions and take action.

Agent-Based Evolutionary Search Ruhul A. Sarker, Tapabrata Ray, 2010-07-12. Agent-based evolutionary search is an emerging paradigm in computational intelligence, offering the potential to conceptualize and solve a variety of complex problems such as currency trading, production planning, disaster response management, business process management, etc. There has been a significant growth in the number of publications related to the development and applications of agent-based systems in recent years, which has prompted special issues of journals and dedicated sessions in premier conferences. The notion of an agent with its ability to sense, learn, and act autonomously allows the development of a plethora of efficient algorithms to deal with complex problems. This notion of an agent differs significantly from a restrictive definition of a solution in an evolutionary algorithm and opens up the possibility to model and capture emergent behavior of complex systems through a natural age-oriented decomposition of the problem space. While this flexibility of representation offered by agent-based systems is widely acknowledged, they need to be signed for specific purposes, capturing the right level of details and description. This edited volume is aimed to provide the readers with a brief background of agent-based evolutionary search, recent developments, and studies dealing with various levels of information abstraction and applications of agent-based evolutionary systems. There are 12 peer-reviewed chapters in this book, authored by distinguished researchers who have shared their experience and findings spanning across a wide range of

information not only for researchers but also for practitioners developing or using visualization applications **Performance Analysis and Grid Computing** Vladimir Getov, Michael Gerndt, Adolfo Hoisie, Allen Malony, Barton Miller, 2012-12-06 Past and current research in computer performance analysis has focused primarily on dedicated parallel machines. However, future applications in the area of high performance computing will not only use individual parallel systems but a large set of networked resources. This scenario of computational and data Grids is attracting a great deal of attention from both computer and computational scientists. In addition to the inherent complexity of parallel machines, the sharing and transparency of the available resources introduces new challenges on performance analysis techniques and systems. In order to meet those challenges, a multi-disciplinary approach to the multi-faceted problems of performance is required. New degrees of freedom will come into play with a direct impact on the performance of Grid computing, including wide area network performance, quality of service, QoS, heterogeneity, and middleware systems, to mention only a few.

Geographic Data Mining and Knowledge Discovery Harvey J. Miller, Jiawei Han, 2009-05-27 The Definitive Volume on Cutting Edge Exploratory Analysis of Massive Spatial and Spatiotemporal Databases. The Semantics of Relationships R. Green, C.A. Bean, Sung Hyon Myaeng, 2013-04-18 The genesis of this volume was the participation of the editors in an ACMISIGIR Association for Computing Machinery Special Interest Group on Information Retrieval workshop entitled Beyond Word Relations, Hetzler 1997. This workshop examined a number of relationship types with significance for information retrieval beyond the conventional topic matching relationship. From this shared participation came the idea for an edited volume on relationships, with chapters to be solicited from researchers and practitioners throughout the world. Ultimately, one volume became two volumes. The first volume, Relationships in the Organization of Knowledge, Bean Green 2001, examines the role of relationships in knowledge organization theory and practice, with emphasis given to thesaural relationships and integration across systems, languages, cultures, and disciplines. This second volume examines relationships in a broader array of contexts. The two volumes should be seen as companions, each informing the other. As with the companion volume, we are especially grateful to the authors who willingly accepted challenges of space and time to produce chapters that summarize extensive bodies of research. The value of the volume clearly resides in the quality of the individual chapters. In naming this volume, The Semantics of Relationships: An Interdisciplinary Perspective, we wanted to highlight the fact that relationships are not just empty connectives. Relationships constitute important conceptual units and make significant contributions to meaning.
