is applied to a whole range of abstract scenarios then to a series of real world applications including the forensic modelling of the SARS virus spread within Amoy Gardens in 2003 and the refurbishment of the O2 Dome Applications to specialised services including underground station drainage and highly infectious disease treatment facilities are discussed and demonstrated alongside the use of design and simulation techniques in support of product development Aimed at both professional and academic users this book serves both as a design aid and as a core text for specialist masters courses in public health and building services engineering
