Aging A Challenge To Scienc Volume 1 Biology:

Biology of Aging Robert Arking, 2006-02-02 Robert Arking's *Biology of Aging* 3rd edition is an introductory text to the biology of aging which gives advanced undergraduate and graduate students a thorough review of the entire field. His prior two editions have also served admirably as a reference text for clinicians and scientists. This new edition captures the extraordinary recent advances in our knowledge of the ultimate and proximal mechanisms underlying the phenomenon of aging. As a result six important conceptual changes are included here: Clarified distinctions between the biological mechanisms involved in longevity determination and those involved in senescent processes. A new conceptual framework around which we can organize all the new facts about aging. This will assist readers to make sense of the information and use the data to form their own ideas. Increased knowledge of aging cells has led to new ideas on how a cell transits from a healthy state to a senescent state while still allowing for high levels of intra and inter specific variability. Discussion of senescent mechanisms assists the reader to understand that aging is a non programmatic loss of function likely arising from the loss of regulatory signals and so is modifiable in the laboratory. Because the standard evolutionary story does not fully explain the evolution of social organisms this edition also includes recent work dealing with intergenerational resource transfers. Lastly if aging mechanisms are plastic then the demand to move these anti aging interventions into the human arena will inevitably grow. A discussion of the biological and ethical arguments on both sides of the question frames the question in an appropriate manner. The mass of data related to aging is summarized into fifteen focused chapters each dealing with some particular aspect of the problem. The last two chapters integrate all this material into a coherent view of how the relevant biological processes change over the life span. This view is expressed in two non technical figures you might say that the whole book exists to fully support Figs 9 4 14 9 whose meanings are elucidated as the reader progresses through the book.

Maurice Marois, Institut de la vie, 1997

Evolutionary Biology of Aging Michael R. Rose, 1994-10-27 This unique book looks at the biology of aging from a fundamentally new perspective one based on evolutionary theory rather than traditional concepts which emphasize molecular and cellular processes. The basis for this approach lies in the fact that natural selection as a powerful determining force tends to decline in importance with age. Many of the characteristics we associate with aging the author argues are more the result of this decline than any mechanical imperative contained within organic structures. This theory in turn yields the most fruitful avenues for seeking answers to the problem of aging and should be recognized as

the intellectual core of gerontology and the foundation for future research The author ably surveys the vast literature on aging presenting mathematical experimental and comparative findings to illustrate and support the central thesis The result is the first complete synthesis of this vital field Evolutionary biologists gerontologists and all those concerned with the science of aging will find it a stimulating strongly argued account *Catalogue of Publications, 1972-1985 Inclusive World Health Organization.
