Aging Phenomena Relationships Among Different Levels Of Organization:

Aging Phenomena Kunio Oota,2013-03-09 The problem of senescence as reflected in the history of religion and philosophy has long been one of the greatest concerns of humankind In contrast gerontology as a branch of science is still comparatively young During the past decade concomitant with rapid progress in our understanding of the basic life sciences vast stores of knowledge about biological aging have been accumulated This knowledge however arising from many scientific disciplines and focused on varying levels of biologic organization seems almost random and covers everything from molecules to human societies Theories advanced to interpret the facts and to understand the mechanisms involved in senescence have remained in individual rather than general territories It has long been felt by some gerontologists that it was time for the various specialists to step back and take a generalist view of gerontology to reconsider and reevaluate the fruits of their analytical pursuits at different levels within a broader context Some others may think it still premature It seemed however that the majority of those who gathered in Tokyo on the occasion of the XIth International Congress of Gerontology were of the opinion that there was much to be gained in looking for interrelationships among the facts and theories originated in the different levels of investigation in an attempt to observe and appreciate the biological drama of senescence as an entity

Published Scientific Papers of the National Institutes of Health National Institutes of Health (U.S.),1981 Each issue lists papers published during the preceding year The Inconstant Gene Lawrence Dillon,2013-11-11 Why should the gene be suggested to be inconstant when the contrary view that gene structure is invariant except through mutagenic processes induced by potent external factors has long been a universal doctrine of genetics Indeed during the early part of the present century before mutation was recognized as being of general occurrence the seeming unvarying nature of the gene led to skepticism regarding the validity of the evolutionary theory only later could the origins of the morphological differences between individuals and species be attributed to a combination of mutation and evolution involving natural forces selecting between favorable and unfavorable genetic changes But during the past several decades as knowledge of the macromolecular constitution of organisms has increased to the point where even the primary structures of the genes themselves are being revealed on a routine basis it has become increasingly difficult to ascribe all the resulting observations to ordinary mutagenesis and natural selection Some more profound mechanism often seems to be present that influences both the constancy and inconstancy of the genes an apparatus whose existence this study hopes to reveal In seeking to demonstrate the universality of this mechanism data are sought through the numerous activities of organisms of many types wherever gene action changes are manifest Annual Report National Institute on Aging,1980 **Molecular Biology of Aging** Avril D. Woodhead,Anthony D. Blackett,Alexander Hollaender,2013-11-22 It is delightful but humbling to find my face at the start of these Proceedings there are innumerable other faces which could equally well stand there from among the band who have foregathered at every gerontology conference since the subject was launched in its present form but I deeply

appreciate being there Gerontology did not grow by accident Its present standing is the fruit of careful planning undertaken by European and American scientists back in the 1950 s In those days it was still a fringe science and the conspirators had much the standing of the 1920 s Interplanetary Society The United States itself is the offspring of conspiracy for when the results of conspiracy are beneficent the conspirators become Founding Fathers This has been the case with gerontology The present meeting is especially gratifying because the papers have been recitals of normal hard science investigation We had to get through the rigors of a long period of semantic argument and a long period of one shot general theories before this kind of meeting normal in all other research fields could take place It was also necessary to breed in the menagerie a generation of excellent investigators aware of the theoretical background but unintimidated by it who share our conviction that human aging is comprehensible and probably controllable and who go into the laboratory to attack specifics *Annual Report Argonne National Laboratory. Division of Biological and Medical Research, 1979* *Critical Reviews Oxidative Stress And Aging: Advances In Basic Science, Diagnostics And Intervention (In 2 Vols)* Richard G Cutler, Henry Rodriguez, 2002-10-28 This innovative and comprehensive reference book provides the most up to date information pertaining to the translational research field of oxidative stress and aging The book focuses on understanding the molecular basis of oxidative stress and its associated age related diseases with the goal being the development of new and novel methods in treating the human aging processes The book charts the course of this new and rapidly emerging field of Oxidative Stress Diagnostics and Therapeutics that will have a significant impact on the future economics science and practice of medicine Over 100 of the leading experts in this field whose specialty includes biogerontology geriatric medicine free radical chemistry and biology oncology cardiology neurobiology dermatology pharmacology nutrition and molecular medicine have contributed information to this book This reference book is an essential reading material to a broad range of individuals including researchers physicians corporate industry leaders graduate and medical school students as well as the many health conscious individuals who wish to know more about the emerging field of oxidative stress and aging with an emphasis on diagnostics and intervention **Aging Phenomena** Kunio Oota, 1980-06-01 Scientific Directory and Annual Bibliography National Institutes of Health (U.S.), Protides of the Biological Fluids H. Peeters, 2014-06-28 Protides of the Biological Fluids An International Review Series Devoted to Proteins and Related Studies Volume 29 Membrane Proteins Receptor Ligand Interactions Monoclonal Antibodies New Methods focuses on membrane proteins receptor ligand interactions and monoclonal proteins as a reagent The selection first offers information on H Y and sex determination and aspects of the difficulties to purify membrane proteins Topics include solubilization by acylation influence of supporting media on the aggregation of proteins solubilization with detergents and organic solvents and membrane proteins giant detergent molecules The text then examines the application of group specific reagents for hydrophobic labeling and crosslinking of membrane proteins and comparison of secreted and membrane bound human immunoglobulins M and D The

publication tackles sialoglycoproteins glycoporphins in the plasma membranes of different cells and their receptor functions and the structures and antigenic properties of human erythrocyte membrane sialoglycoproteins Discussions focus on the primary structure of human erythrocyte glycoporphins molecular structure of the MN bloodgroup substance and genetic variants of glycoporphin A The book also takes a look at the glycoproteins of the human syncytiotrophoblastic plasma membrane and structure and function of a membrane glycoprotein encoded in the adenovirus genome The selection is a valuable reference for readers interested in membrane proteins receptor ligand interactions and monoclonal antibodies

Biological Effects of Alcohol Henri Begleiter,2014-11-14 The disease of alcoholism has long been a major health problem which affects significant proportions of the populations of various countries It is now apparent that legal and moral sanctions have not provided a sufficient impetus to arrest this rampant problem Therefore it is evident that the approach to this international health problem must rely on the development of efficacious prevention and treatment techniques If the treatment and prevention of alcoholism is to be based on the rational assessment of the disease it is imperative that we understand the complex determinants of this disease The elements that initiate and perpetuate this addictive process must be examined and elucidated Because this disease appears to involve biological psychological and sociological factors the need for multidisciplinary research is of the utmost importance Indeed it is imperative that research findings obtained in one area or discipline be made available to researchers in other disciplines A better understanding of the factors which contribute to alcohol related problems can be achieved by studying the agent that is essential for the expression of the disease process This can be accomplished by examining the acute or chronic effects of that agent upon a number of biochemical physiological or behavioral systems This international conference was organized to enhance communication among investigators from different disciplines working on different aspects of alcohol related problems and alcoholism The proceedings of this international symposium represent the most recent findings in these areas of research The topics range from biophysical processes to complex cognitive processes It is hoped that findings from each discipline can challenge and stimulate the others Many papers in this publication present new data and novel contributions to the alcoholism literature Indeed the high qualities of the papers are tributes to the dedication and high scientific standards manifested by the outstanding participants I wish to express my gratitude to the individuals who chaired the various sessions These scientists played a most critical role in the selection of participants and in the conduct of the symposium These international symposia have been going on since 1972 and have always been part of the meetings sponsored by the International Council of Alcoholism and Addictions

Phosphate and Minerals in Health and Disease Shaul G. Massry,2013-03-09 We are pleased to present to our readers the Proceedings of the Fourth International Workshop on Phosphate and Other Minerals which was held in Strasbourg during June 22 24 1979 It was hosted by Professor Henri Jahn Professor of Medicine and Chief

Department of Nephrology at the University of Strasbourg These Workshops have become a tradition in the scientific scene of mineral metabolism The meetings have been providing a unique framework for close interaction between scientists from various disciplines such as nephrologists endocrinologists bio chemists nutritionists and those dealing with bone metabolism The Workshops also created a forum for the delivery of original information as well as state of the art presentations on exciting topics of current interest in this evergrowing field of phosphate and mineral homeostasis The Fourth International Workshop was attended by three hundred scientists from 15 countries including Austria Canada Denmark England France Germany Holland Israel Italy Japan Sweden Switzerland and the United States of America The topics discussed included those dealing with the renal handling of phosphate calcium and magnesium intermediary phosphate metabolism and phosphate homeostasis in health and disease Two symposia were also presented one dealt with nephrolithiasis and its relation to phosphate and the other with bone metabolism In addition to 22 presentations by invited speakers the Workshop provided 46 oral and 93 poster presentations selected from over 250 abstracts submitted to the Organizing Committee

Lithium Effects on Granulopoiesis and Immune Function Arthur H. Rossof, 2012-12-06 This monograph contains papers which resulted from an international workshop on the effects of lithium on the hematopoietic and immunologic systems The meeting was held at the John L and Beatrice Keeshin International Biomedical Systems Planning Center of Rush University in Eagle River Wisconsin from June 6 through June 9 1979 The object of this conference was to bring together scientists from around the world with an interest in the effects of lithium and its potential use in human disease to bolster and stimulate the hematologic and immune systems These topics seemed to us to be important and the time seemed right for bringing together the workers in these fields to exchange ideas and recent research results We sought to bring together basic research scientists trying to uncover the mechanism of action of lithium in the stimulation of granulopoiesis and in its immunologic effects together with those involved in clinical care and the use of lithium as a therapeutic tool in neoplastic and non neoplastic disorders This was the first use of the Keeshin Center for such a program The sessions were conducted in a relaxed atmosphere with a good deal of give and take by all the participants The editors of this book hope that it will be useful as the first volume completely devoted to these applications of lithium in these new and as yet incompletely developed fields

Diet and Resistance to Disease Marshall Phillips, 2012-12-06 Intuitively we realize that animals that are well fed and well cared for are healthier than animals that are not well fed or well cared for Although nutritionists have long been concerned with minimum nutrient requirements for maximal growth rate and maintenance it has been only recently that investigators have begun to look at the nutritional requirements that provide optimal health The increasingly sophisticated methods of immunology have allowed investigators to define indicators of resistance to disease such as cell mediated immunity lymphocyte functions and macrophage functions When these immunological tools are combined with the classical methods of nutrition research it is possible to determine how dietary constituents affect each of these cellular immune

systems and to gain an overall understanding of how these systems affect resistance to disease This symposium was organized to bring together people working on various nutritional problems that have an interrelationship to resistance to disease so that this rapidly expanding area of nutritional immunology could be reviewed We felt that the Agricultural and Food Division of the American Chemical Society was an ideal forum to present this material In relating nutrition and infection two areas of importance must be considered 1 public health i e the prevention and treatment of human disease and metabolic disorders and 2 live stock and poultry production The production of meat fibre and animal materials continues to be a more intensive operation in the agricultural system of this country and the world **Vitamins, Nutrition, and Cancer** K. Prasad,1984-08-22 Hamster Immune Responses in Infectious and Oncologic Diseases Jacob W. Streilein,2012-12-06 This volume comprises the written contributions of participants in a symposium held in Dallas Texas June 3 5 1980 entitled HAMSTER IMMUNE RESPONSIVENESS AND EXPERIMENTAL MODELS OF INFECTIOUS AND ONCOLOGIC DISEASES This meeting followed its predecessor Hamster Immune Responses Experimental Models Linking Immunogenetics Oncogenesis and Viral Immunity by three years This more recent meeting was more pointed in its focus and the contributions appeared to be more tightly associated These meetings are part of an extended effort by experimentalists using the Syrian hamster as an animal model system to bring together workers in potentially related areas for the exchange of ideas and information The success of the symposia derives partly from the scientific excellence of the contributing scientists and partly from the financial support of the National Institutes of Health through the Fogarty International Center The administration of the University of Texas Health Science Center at Dallas under President Charles C Sprague also donated time facilities and financial support Preparation of the manuscripts in this volume as camera ready copy for the publisher was the diligent and dedicated effort of Ms Sara Howard Copy editing was expertly performed by Ms Sandra Schulte and proof reading was the responsibility of Dr Patricia Fultz and Ms Alix Gerboth However final responsibility for any errors and omissions in the published volume is taken by the five local editors J Wayne Streilein David A Hart Joan Stein Streilein William R Duncan R E
