Some Aspects of Moroccan Arabic Agrammatism Samir

Diouny,2010-04-16 This book is a contribution to the ongoing debate in agrammatism an acquired language disorder resulting from left hemisphere brain damage The aim of the book is 1 to give a comprehensive account of agrammatism and outlines and critically examines the different accounts of agrammatic production and asyntactic comprehension 2 to address morphological and structural properties of Moroccan Arabic agrammatic speech and 3 to put under scrutiny Friedmann and Grodzinsky s 1997 syntactic account of tense and agreement in production and across modalities The book attempts to answer two important research questions Are tense and agreement dissociated as predicted by the Tree Pruning Hypothesis Friedmann and Grodzinsky 1997 Is the tense agreement dissociation production specific or does it extend to comprehension and grammaticality judgment A third objective of the book is to examine the comprehension abilities of four Moroccan Arabic speaking agrammatic subjects in the light of the Trace Deletion Hypothesis Grodzinsky 1995 a b A major research question is whether or not active sentences and subject relative sentences are understood better than object relative sentences The book takes the view the tense agreement dissociation reported for Hebrew Friedmann and Grodzinsky 1997 and German Wenzlaff and Clahsen 2003 can be replicated in Moroccan Arabic However the syntactic account as outlined in Friedmann and Grodzinsky 1997 cannot account for the tense agreement dissociation as Moroccan Arabic has the agreement node above the tense node In addition the Trace Deletion Hypothesis cannot account for the comprehension difficulties experienced by the four Moroccan Arabic speaking agrammatic subjects the case is so because both subject relatives and object relatives are understood below chance level Based on data collected through different experimental methods it is argued that the deficit in agrammatism cannot be explained in terms of a structural account but rather in terms of a processing account Access to syntactic knowledge tends to be blocked grammatical knowledge however is entirely intact **Aspects of Multilingual**

linguistics and psycholinguistics for the past four decades Slobin has insisted on a rigorous crosslinguistic approach in his attempt to identify universal developmental patterns in language learning to explore the effects of particular types of languages on psycholinguistic processes to determine the extent to which universals of language and language behavior are determined by modality vocal auditory vs manual visual and finally to investigate the relation between linguistic and cognitive processes In this volume researchers take up the challenge of the differences between languages to forward research in four major areas with which Slobin has been concerned throughout his career language learning in crosslinguistic perspective spoken and sign languages the integration of language specific factors in narrative skill theoretical issues in typology language development and language change and the relationship between language and cognition All chapters are written by leading researchers currently working in these fields who are Slobin s colleagues collaborators or former students in linguistics psychology anthropology and cognitive science Each section starts with an introductory chapter that connects the themes of the chapters and reviews Slobin s contribution in the context of past research trends and future directions The whole volume focuses squarely on the central argument universals of human language and of its development are embodied and revealed in its diverse manifestations and utilization Crosslinguistic Approaches to the Study of Language is a key resource for those interested in the range of differences between languages and how this impacts on learning cognition and language change and a tribute to Dan Slobin s momentous contribution to the field

Syntax, the brain, and linguistic theory: a critical reassessment ,2024-07-23 Syntax refers both to the structure of sentences and the underlying combinatorial capacity to generate this structure For some time neurolinguistic research on syntax was heavily influenced by theoretical linguistic approaches which characterize in detail the nature of syntactic representations A rough consensus has been that the primary region supporting syntax is Broca s area and that syntactic deficits in aphasia exist primarily due to damage or degeneration of this region commonly occurring in Broca s aphasia and nonfluent agrammatic PPA With respect to temporal dynamics of syntactic processing neurophysiological research on syntax focused on specific event related potentials such as the ELAN and P600 thought to index phrase structure building and syntactic reanalyses However the research landscape has changed substantially in the last several years with new methodologies and theoretical perspectives and there is little consensus on the neurobiological foundations of syntax or the role of linguistic theory in guiding research The goal of this Research Topic is to reassess our understanding of syntax and the brain in light of these developments Specifically it is designed to address the following set of major questions
