Agroecological Innovations Increasing Food Production With Participatory Development:

Agroecological Innovations Norman Uphoff, 2013-06-17 The world's food supply needs to rise significantly yet both arable and water supplies per capita are decreasing. Not only are modern agricultural methods beyond the reach of those suffering the greatest food insecurity but they are also ecologically damaging, relying upon fossil energy and chemical inputs. This volume offers a collection of innovative and diverse approaches to agricultural development. Documented in 12 case studies, these approaches are reliant upon greater knowledge, skill, and labour input rather than larger capital expenditure. They are shown to increase yield substantially, sometimes doubling or tripling output. This volume presents the concepts and operational means for reorienting agricultural efforts towards these more environmentally friendly and socially desirable approaches in the developed as well as developing world.

Development economics between markets and institutions Erwin Bulte, Rued Ruben, 2023-08-28 This volume in the Mansholt series presents state-of-the-art discussions on a wide variety of topics in the field of agricultural development. More than 20 chapters have been prepared by internationally known scholars and policy analysts, providing a concise overview of a variety of recent debates in development economics. While the background of most contributors is in economic science, the chapters are prepared so that they feed into ongoing policy discussions and are accessible to a wide readership. The contributions in this volume are organized around five themes: prospects for rural poverty alleviation, sustainable management of natural resources, strategies for enhancing food security, markets, and the role of the state and institutions, and governance. It is obvious there are many links between these themes, and indeed the integration between them is emphasized in various chapters. This book is prepared as a festschrift or Liber Amicorum for professor Arie Kuyvenhoven. His retirement from the Development Economics Group at Wageningen University, The Netherlands, is a good opportunity to take stock of recent developments in the area of agricultural development economics. Therefore, in addition to being a valuable source of information for readers with an interest in development, this volume is also intended as a farewell gift to Arie from friends and colleagues.
