Heinrich C. Mayr, Christian Kop, Stephen Liddle, Athula Ginige, 2013-06-17 This volume constitutes the proceedings of the 4th International United Information Systems Conference UNISCON 2012 which was held in Yalta Ukraine during June 1 3 2012 UNISCON 2012 was affiliated with the 8th International Conference on ICT in Education Research and Industrial Applications ICTERI 2012 The 14 full papers four short papers and three extended abstracts presented with a keynote speech were carefully reviewed and selected from 96 submissions The topical sections covered are data management applications modeling and semantics and social issues in information systems

#### **Formal Approaches to Agent-Based Systems**

Michael G. Hinchey, James L. Rash, Walter F. Truszkowski, Christopher A. Rouff, 2005-01-31 The 3rd Workshop on Formal Approaches to Agent Based Systems FAABS III was held at the Greenbelt Marriott Hotel near NASA Goddard Space Flight Center in April 2004 in conjunction with the IEEE Computer Society The first FAABS workshop was held in April 2000 and the second in October 2002 Interest in agent based systems continues to grow and this is seen in the wide range of conferences and journals that are addressing the research in this area as well as the prototype and developmental systems that are coming into use Our third workshop FAABS III was held in April 2004 This volume contains the revised papers and posters presented at that workshop The Organizing Committee was fortunate in having significant support in the planning and organization of these events and were privileged to have two renowned keynote speakers Prof J Moore FAABS I Prof Sir Roger Penrose FAABS II and Prof John McCarthy FAABS III who spoke on the topic of self-aware computing systems auguring perhaps a greater interest in autonomic computing as part of future FAABS events We are grateful to all who attended the workshop presented papers or posters and participated in panel sessions and both formal and informal discussions to make the workshop a great success Our thanks go to the NASA Goddard Space Flight Center Codes 588 and 581 Software Engineering Laboratory for their financial support and to the IEEE Computer Society Technical Committee on Complexity in Computing for their sponsorship and organizational assistance

#### **Philosophy and Theory of Artificial Intelligence**

Vincent C. Müller, 2012-08-23 Can we make machines that think and act like humans or other natural intelligent agents The answer to this question depends on how we see ourselves and how we see the machines in question Classical AI and cognitive science had claimed that cognition is computation and can thus be reproduced on other computing machines possibly surpassing the abilities of human intelligence This consensus has now come under threat and the agenda for the

philosophy and theory of AI must be set anew re defining the relation between AI and Cognitive Science We can re claim the original vision of general AI from the technical AI disciplines we can reject classical cognitive science and replace it with a new theory e g embodied or we can try to find new ways to approach AI for example from neuroscience or from systems theory To do this we must go back to the basic questions on computing cognition and ethics for AI The 30 papers in this volume provide cutting edge work from leading researchers that define where we stand and where we should go from here

**Artificial Superintelligence** Roman V. Yampolskiy, 2015-06-17 A day does not go by without a news article reporting some amazing breakthrough in artificial intelligence AI Many philosophers futurists and AI researchers have conjectured that human level AI will be developed in the next 20 to 200 years If these predictions are correct it raises new and sinister issues related to our future in the age of The Technological Singularity Victor Callaghan, James Miller, Roman Yampolskiy, Stuart Armstrong, 2017-05-22 This volume contains a selection of authoritative essays exploring the central questions raised by the conjectured technological singularity In informed yet jargon free contributions written by active research scientists philosophers and sociologists it goes beyond philosophical discussion to provide a detailed account of the risks that the singularity poses to human society and perhaps most usefully the possible actions that society and technologists can take to manage the journey to any singularity in a way that ensures a positive rather than a negative impact on society The discussions provide perspectives that cover technological political and business issues The aim is to bring clarity and rigor to the debate in a way that will inform and stimulate both experts and interested general readers *Theory and Practice of Formal Methods* Erika Ábrahám, Marcello Bonsangue, Einar Broch Johnsen, 2016-03-12 This Festschrift volume has been published in honor of Frank de Boer on the occasion of his 60th birthday Frank S de Boer is a prominent member of the research community in formal methods and theoretical computer science A brief look at his lengthy publication list reveals a broad area of interest and a versatile modus operandi with logic and constraint programming deductive proof systems soundness and completeness semantics compositionality and full abstraction process algebra and decidability multithreading and actor based concurrency agent programming ontologies and modal logic real time systems timed automata and schedulability enterprise architectures choreography and coordination testing and runtime monitoring and cloud computing and service level agreements For a while he also liked failures especially in semantics and optimistically concluded with the failure of failures In fact Frank has an opportunistic approach to research Rather than seeing obstacles he finds opportunities

Developments and Challenges for Autonomous Unmanned Vehicles Anthony Finn, Steve Scheding, 2010-03-17 It is widely anticipated that autonomous vehicles will have a transformational impact on military forces and will play a key role in many future force structures As a result many tasks have already been identified that unmanned systems could undertake more readily than humans However for this to occur such systems will need to be agile versatile persistent reliable survivable and lethal This will require many of the vehicles cognitive or higher order functions to be more fully developed whereas to date

only the component or physical functions have been successfully automated and deployed The book draws upon a broad range of others work with a view to providing a product that is greater than the sum of its parts The discussion is intentionally approached from the perspective of improving understanding rather than providing solutions or drawing firm conclusions Consequently researchers reading this book with the hope of uncovering some novel theory or approach to automating an unmanned vehicle will be as disappointed as the capability planner who anticipates a catalogue of technical risks and feasibility options against his favoured list of component technologies and potential applications Nevertheless it is hoped that both will at least learn something of the other s world and that progress will ensue as a result For the defence policy and decision maker this is a must read book which brings together an important technology summary with a considered analysis of future doctrinal legal and ethical issues in unmanned and autonomous systems For research engineers and developers of robotics this book provides a unique perspective on the implications and consequences of our craft connecting what we do to the deployment and use of the technology in current and future defence systems Professor Hugh Durrant Whyte      **Automated Reasoning with Analytic Tableaux and Related Methods** Nicola Olivetti,2007-06-21 This book constitutes the refereed proceedings of the 16th International Conference on Automated Reasoning with Analytic Tableaux and Related Methods TABLEUX 2007 held in Aix en Provence France It covers the wide range of logics from intuitionistic and substructural logics to modal logics including temporal and dynamic logics from many valued logics to nonmonotonic logics and from classical first order logic to description logics      The Combined Power of Research, Education, and Dissemination Mike Hinchey,Bernhard Steffen,2024-10-22 Starting with a Laurea in Ingegneria Elettronica and a PhD in Computer and Systems Engineering at the Politecnico di Torino Tiziana has stayed faithful to her love of organized management of composable functionalities in software and systems with building blocks and MDD and she strives for coherence and alignment in complex systems through verification model checking and workflow synthesis Her quest for simplicity spans technologies low code no code ITSy project business Business Model Canvas tools for innovative business models and disciplines with her concept of the Digital Thread a metaphor for IT mediated interoperation of reusable and ideally verified tools and systems in new platforms where reuse repurposing and evolution are supported by design Her most recent initiative R ISE aims at opening the world of IT production and adaptation to a wider range of users and professions Tiziana is a cofounder and managing editor of the International Journal on Software Tools for Technology Transfer she cofounded the ISoLA conference and cofounded METAFrames Technologies serving as CEO She is a Fellow of the Society for Design and Process Science and a Fellow and President of the Irish Computer Society Throughout her career Tiziana s successes have been motivated by how best to advance science and engineering through the implementation of techniques in challenging applications and the contributions in this volume by leading researchers are representative of a community that shares this drive      Autonomy Requirements Engineering for Space Missions Emil Vassev,Mike Hinchey,2014-08-27

Advanced space exploration is performed by unmanned missions with integrated autonomy in both flight and ground systems Risk and feasibility are major factors supporting the use of unmanned craft and the use of automation and robotic technologies where possible Autonomy in space helps to increase the amount of science data returned from missions perform new science and reduce mission costs Elicitation and expression of autonomy requirements is one of the most significant challenges the autonomous spacecraft engineers need to overcome today This book discusses the Autonomy Requirements Engineering ARE approach intended to help software engineers properly elicit express verify and validate autonomy requirements Moreover a comprehensive state of the art of software engineering for aerospace is presented to outline the problems handled by ARE along with a proof of concept case study on the ESA s BepiColombo Mission demonstrating the ARE s ability to handle autonomy requirements
