Agent Technology Nicholas R. Jennings, Michael J. Wooldridge, 2012-12-06 Agents represent an exciting and promising new approach to building a wide range of software applications Agents are autonomous problem solving entities that are able to flexibly solve problems in complex dynamic environments without receiving permanent guidance from the user Agent Technology Foundations Applications and Markets is the first book to provide an integrative presentation of the issues challenges and success of designing building and using agent applications The chapters presented are written by internationally leading authorities in the field The book provides for a general audience a unique overview on agent technology applications ranging from an introduction to the technical foundations to reports on dealing with specific agent systems in practice

Intelligent Agent Technology Ning Zhong, 2001 This volume is an attempt to capture the essence of the state of the art of intelligent agent technology and to identify the new challenges and opportunities that it is or will be facing The most important feature of the volume is that it emphasizes a multi faceted holistic view of this emerging technology from its computational foundations OCo in terms of models methodologies and tools for developing a variety of embodiments of agent based systems OCo to its practical impact on tackling real world problems Contents Formal Agent Theories Computational Architecture and Infrastructure Learning and Adaptation Knowledge Discovery and Data Mining Agents Distributed Intelligence Agent Based Applications Readership Graduate students in computer science and engineering academics lecturers researchers software systems engineers IT engineers and industrialists *Applications of Agent Technology in Traffic and Transportation* Franziska Klügl, Ana Bazzan, Sascha Ossowski, 2006-03-30 Building effective and user friendly transportation systems is one of the big challenges for engineers in the 21st century There is an increasing need to understand model and govern such systems at both the individual and the society level Traffic and transportation scenarios are extraordinarily appealing for Distributed Artificial Intelligence and multi agent technology in particular This book gives an overview of recent advances in agent based transportation systems

Coordination and Agent Technology in Value Networks Martin Bichler, 2004 New approaches and technologies are required to coordinate the interdependent interests of economic entities Distributed decision making and self organization become increasingly important where hierarchical planning reaches its limits Therefore innovative solutions have to face those challenges allowing especially for coordination and information processing between distributed entities In particular market based coordination mechanisms provide this opportunity they can be efficiently combined with powerful technologies like software agents to build the flexible coordination infrastructures for today s and tomorrow s electronic business Science and industry will have to collaborate Not only to identify the challenges of the prospering information society and to bring them onto our research agendas Consequently the book at hand is targeted towards scientists and practitioners likewise Intelligent Agent Technology: Systems, Methodologies And Tools - Proceedings Of The 1st Asia-Pacific Conference On Intelligent Agent Technology (Iat '99)

Technology in the Health Care Domain Antonio Moreno, John L. Nealon, 2012-12-06 Agent Cities 4 is an ambitious project whose main aim is the construction of a worldwide publicly accessible network of agent based FIPA platforms In March 2003 there are around 50 active platforms Each of them supports agents that offer services similar to those that can be found in a real city facilities amenities attractions information and commercial services It is expected that in the near future it will be possible to implement intelligent complex compound services e g agents that are able to help a user to plan a weekend away including tasks such as booking air tickets selecting and booking a room in an appropriate hotel buying tickets for the theatre and reserving a table in a restaurant that is near the theatre and offers the user s favourite meal The main aim of our work was to develop a set of agents that could offer to the citizens and visitors of a city not the usual leisure oriented services but health care related services This interest is related with previous work that our research group had done in the last years in the application of AI techniques especially agent based technology to the medical domain see e g 6 Therefore we decided to design and implement a multi agent system with the following features The user may request information about all the medical centres available in a particular geographical area *Agent Technology from a Formal Perspective* Michael
