Morton,Judith M. Hall,2012-12-06

The purpose of this dictionary is to provide a convenient and affordable personal desk reference resource. The authors who have many years experience in pharmacological research teaching and editing recognized a need for a single up to date volume encompassing material that hitherto could be gathered only from a well stocked library. This book comprises two main sections: an A-Z listing of drugs and their properties and a descriptive glossary of technical terms. The level and scope of this reference material will make it essential for pharmacologists and medicinal chemists from the graduate student to established worker. It should also be valuable to workers in allied biomedical disciplines such as biochemistry and physiology, medical students and science writers and editors.

**Scope:** The dictionary is centred on pharmacologically active agents. Workers in drug related disciplines need to correctly identify individual agents from an arsenal of pharmacologically active compounds, each with a number of alternative drug names according to the country or naming convention.

**Self-consciousness and "split" Brains** Elizabeth Schechter, 2018. Could a single human being ever have multiple conscious minds? Some human beings do. The corpus callosum is a large pathway connecting the two hemispheres of the brain. In the second half of the twentieth century a number of people had this pathway cut through as a treatment for epilepsy. They became colloquially known as split brain subjects. After the two hemispheres of the brain are cortically separated in this way they begin to operate unusually independently of each other in the realm of thought, action and conscious experience, almost as if each hemisphere now had a mind of its own. Philosophical discussion of the split brain cases has overwhelmingly focused on questions of psychological identity in split brain subjects: questions like "How many subjects of experience is a split brain subject?" "How many intentional agents?" "How many persons?" On the one hand, under experimental conditions, split brain subjects often act in ways difficult to understand except in terms of each of them having two distinct streams or centers of consciousness. Split brain subjects thus evoke the duality intuition that a single split brain human being is somehow composed of two thinking, experiencing and acting things. On the other hand, a split brain subject nonetheless seems like one of us at the end of the day rather than like two people sharing one body. In other words, split brain subjects also evoke the unity intuition that a split brain subject is one person. Elizabeth Schechter argues that there are in

fact two minds subjects of experience and intentional agents inside each split brain human being right and left On the other hand each split brain subject is nonetheless one of us The key to reconciling these two claims is to understand the ways in which each of us is transformed by self consciousness
