

Mechanisms for Aggregating Individual Preferences

Majority Voting: When It Works

majority voting The typical mechanism used to aggregate individual votes into a social decision, whereby individual policy options are put to a vote and the option that receives the majority of votes is chosen.

To be consistent, the aggregation mechanism must satisfy three goals:

- ▶ *Dominance.*
- ▶ *Transitivity.*
- ▶ *Independence of irrelevant alternatives.*

Majority voting can *produce a consistent aggregation of individual preferences only if preferences are restricted to take a certain form.*

Judgment Aggregation Davide Grossi, Gabriella Pigozzi, 2014-03-01 Judgment aggregation is a mathematical theory of collective decision making It concerns the methods whereby individual opinions about logically interconnected issues of interest can or cannot be aggregated into one collective stance Aggregation problems have traditionally been of interest for

disciplines like economics and the political sciences as well as philosophy where judgment aggregation itself originates from but have recently captured the attention of disciplines like computer science artificial intelligence and multi agent systems Judgment aggregation has emerged in the last decade as a unifying paradigm for the formalization and understanding of aggregation problems Still no comprehensive presentation of the theory is available to date This Synthesis Lecture aims at filling this gap presenting the key motivations results abstractions and techniques underpinning it *The Oxford Handbook of Political Science* Robert E. Goodin, 2011-07-07 Drawing on the rich resources of the ten volume series of The Oxford Handbooks of Political Science this one volume distillation provides a comprehensive overview of all the main branches of contemporary political science political theory political institutions political behavior comparative politics international relations political economy law and politics public policy contextual political analysis and political methodology Sixty seven of the top political scientists worldwide survey recent developments in those fields and provide penetrating introductions to exciting new fields of study Following in the footsteps of the New Handbook of Political Science edited by Robert Goodin and Hans Dieter Klingemann a decade before this Oxford Handbook will become an indispensable guide to the scope and methods of political science as a whole It will serve as the reference book of record for political scientists and for those following their work for years to come

Aggregation in Economic Research J. van Daal, A.H. Merckies, 2012-12-06 Our interest in problems of aggregation originates from about seven years ago when we became involved in research in the field of applied microeconomics To our astonishment a vast majority of researchers in this area took it for granted that their mostly thoroughly derived micro models could meaningfully be confronted with per capita data Many of them did not even realize at least they gave no utterance to it that applying macro data in micro models raises considerable problems Those who did mention the difficulty almost always belittled its importance Fortunately there are noteworthy exceptions Thinking about aggregation raises at least two questions Why or why not aggregate and How to aggregate and in particular to what degree General answers to these questions can only be given in uninformative wording as many assertions in economics one aggregates for the sake of tractability because of the lack of individual data to avoid or to reduce multicollinearity to save degrees of freedom one abstains from aggregation to avoid loss of information to avoid aggregation biases and one aggregates such and to such degree as to bypass or reduce the drawbacks mentioned above *National Choices and International Processes* Zeev Maoz, 1990-06-29 National Choices and International Processes will be of interest to students and specialists in foreign policy and international relations theory

Statistical Methods for Quality of Life Studies Mounir Mesbah, Bernard F. Cole, Mei-Ling Ting Lee, 2013-06-29 On October 16 and 17 2000 we hosted an international workshop entitled Statistical Design Measurement and Analysis of Health Related Quality of Life The workshop was held in the beautiful city of Arradon South Brittany France with the main goal of fostering an interdisciplinary forum for discussion of theoretical and applied statistical issues arising in studies of health related quality of life HRQoL Included were

biostatisticians psychometricians and public health professionals e.g. physicians sociologists psychologists active in the study of HRQoL. In assembling this volume we invited each conference participant to contribute a paper based on his or her presentation and the ensuing and very interesting discussions that took place in Arradon. All papers were peer reviewed by anonymous reviewers and revised before final editing and acceptance. Although this process was quite time consuming we believe that it greatly improved the volume as a whole making this book a valuable contribution to the field of HRQoL research. The volume presents a broad spectrum of papers presented at the Workshop and thus illustrates the range of current research related to the theory methods and applications of HRQoL as well as the interdisciplinary nature of this work. Following an introduction written by Sir David Cox it includes 27 articles organized into the following chapters:

Social Choice Theory Satish Kumar Jain, 2022-11-01 This introductory textbook on social choice theory makes the social choice theoretic framework and its main results that have a direct bearing on the discourses on electoral rules and policy evaluation accessible to a larger audience. The text is essentially self contained. No previous knowledge of mathematical logic or relational algebra is assumed. Whatever technical prerequisites are needed are developed in the text itself. Although the text is at an introductory level there has been no compromise on rigor. Unlike most introductory books the relevant proofs are not omitted rather they have been explained in detail. The text has a large number of examples so that the concepts and results become clear to the reader. There is a large number of exercises with full solutions provided at the end of the text so that the reader can check her/his understanding of the material.

Handbook of Environmental Economics Karl-Goran Maler, Jeffrey R. Vincent, 2003-05-20 The Handbook of Environmental Economics focuses on the economics of environmental externalities and environmental public goods. Volume I examines environmental degradation and policy responses from a microeconomic institutional standpoint. Its perspective is dynamic including a consideration of the dynamics of natural systems and global with attention paid to issues in both rich and poor nations. In addition to chapters on well established topics such as the theory and practice of pollution regulation it includes chapters on new areas of environmental economics research related to common property management regimes population and poverty mechanism design political economy of regulation experimental evaluations of policy instruments and technological change.

Handbook of Parliamentary Studies Cyril Benoît, Olivier Rozenberg, 2020-11-27 This comprehensive Handbook takes a multidisciplinary approach to the study of parliaments offering novel insights into the key aspects of legislatures legislative institutions and legislative politics. Connecting rich and diverse fields of inquiry it illuminates how the study of parliaments has shaped a wider understanding surrounding politics and society over the past decades.

The Ethics of Technological Risk Lotte Asveld, Sabine Roeser, 2012-05-04 A comprehensive and important collection that includes essays by some of the leading figures in the field. Essential reading for anyone interested in risk assessment. Professor Kristin Shrader Frechette University of Notre Dame. The editors are to be congratulated for bringing together a distinguished international group of theorists to reflect on the issues.

This volume will be sure to raise the level of debate while at the same time showing the importance of philosophical reflection in approaches to the problems of the age Professor Jonathan Wolff University College London This volume brings together top authors from the fields of risk philosophy social sciences and psychology to address the issue of how we should decide how far technological risks are morally acceptable or not The underlying principles are examined along with methodological challenges public involvement and instruments for democratization A strong theoretical basis is complemented by a range of case studies from some of the most contentious areas including medical ethics and GM crops This book is a vital new resource for researchers students and anyone concerned that traditional approaches to risk management don't adequately address ethical considerations *Group Verbal Decision Analysis* Alexey B.

Petrovsky, 2023-03-14 This book describes an original approach to solving tasks of individual and collective choice classification ranking and selection of multi attribute objects Object representation with multisets allows considering simultaneously numerical and symbolic variables In group verbal decision analysis judgments of all participants are taken into account without a compromise between contradictory Natural language is used to describe problems and objects formalize knowledge of experts and preferences of decision makers and explain results Verbal methods and technologies are more transparent less laborious for a person and weakly sensitive to measurement errors The book also includes examples of applying new tools in real ill structured high dimensional choice tasks It is intended for researchers managers consultants analysts and developers as well as for teachers and students of applied mathematics computer science information processing engineering economics and management **Models, Methods, Concepts & Applications of the Analytic**

Hierarchy Process Thomas L. Saaty, Luis Gonzalez Vargas, 2001 Models Methods Concepts and Applications of the Analytic Hierarchy Process is a volume dedicated to selected applications of the Analytic Hierarchy Process AHP focused on three themes economics the social sciences and the linking of measurement with human values 1 The AHP offers economists a substantially different approach to dealing with economic problems through ratio scales The main mathematical models on which economics has based its quantitative thinking to now are utility theory which uses interval scales and linear programming We hope that the variety of examples included here can perhaps stimulate researchers in economics to try applying this new approach 2 The second theme is concerned with social sciences The AHP offers psychologists and political scientists the methodology to quantify and derive measurements for intangibles We hope that the examples included in this book will encourage them to examine the methods of AHP in terms of the problems they seek to solve 3 The third theme is concerned with providing people in the physical and engineering sciences with a quantitative method to link hard measurement to human values In such a process one needs to interpret what the measurements mean A number is useless until someone understands what it means It can have different meanings in different problems Ten dollars are plenty to satisfy one's hunger but are useless by themselves in buying a new car Such measurements are only indicators of the state of

a system but do not relate to the values of the human observers of that system AHP methods can help resolve conflicts between hard measurement data and human values

Public Law and Economics Robert Cooter, Michael D. Gilbert, 2022 This comprehensive textbook applies economic analysis to public law The economic analysis of law has revolutionized legal scholarship and teaching in the last half century but it has focused mostly on private law business law and criminal law This book extends the analysis to fundamental topics in public law such as the separation of government powers regulation by agencies constitutional rights and elections Every public law involves six fundamental processes of government bargaining voting entrenching delegating adjudicating and enforcing The book devotes two chapters to each process beginning with the economic theory and then applying the theory to a wide range of puzzles and problems in law Each chapter concentrates on cases and legal doctrine showing the relevance of economics to the work of lawyers and judges Featuring lucid accessible writing and engaging examples the book addresses enduring topics in public law as well as modern controversies including gerrymandering voter identification laws and qualified immunity for police

Following Their Leaders Randall G. Holcombe, 2023-03-23 Models of democratic decision making tend to assume that voters have preferences and that candidates adjust their platforms to conform with those preferences however the direction of causation is largely the opposite Political elites offer policy platforms to voters and voters adopt those policies they follow their leaders Following Their Leaders argues that policies are designed by the elite and the electorate has little say Preferences for public policy tend to be anchored in a political identity associated with a candidate party or ideology voters preferences on most issues are derived from their anchor preferences Holcombe argues that because citizens adopt the policies offered by the elite democratic institutions are ineffective constraints on the exercise of political power This volume explores political institutions that help control the elite who exercise political power and discusses the implications political preferences have on democracies
