Aging And The Nervous System:

Behavior, Aging, and the Nervous System Alan Traviss Welford, James E. Birren, 1965 *Pathology of the Aging Human Nervous System* Serge Duckett, J. C. de la Torre, 2001-05-17 This book is a concise and practical compendium of neuropathological information for all professionals whose responsibility it is to make diagnoses care and help elderly humans afflicted with neurological and or psychiatric disorders The term neuropathology includes a multitude of disciplines including pathology histology genetics immunology biochemistry radiology etc This disciplinary approach is reflected in this book This new edition has been completely revised and brought up to date from the 20th to the 21st century Basic neuroscientists were invited to contribute chapters explaining and describing basic scientific principles underlying the neuropathological disciplines Also additional information is provided concerning medic legal issues neuropharmacology and a list of support groups for the elderly neurologically or mentally impaired in Brazil Canada Germany the United Kingdom and the USA

The Process of Aging in the Nervous System James E. Birren, 1959 Aging of the Autonomic Nervous System Francesco Amenta, 1993-06-16 Aging of the Autonomic Nervous System is the first book devoted to the aging of the autonomic nervous system The book presents the most recent findings on topics such as general aspects of the autonomic nervous system main neurotransmitter systems age dependent changes of neuroeffector mechanisms in target organs and therapeutic perspectives It also provides a comprehensive analysis of the possible consequences of these findings Aging of the Autonomic Nervous System will be a useful volume for gerontologists and neuroscientists **Model Systems of**

Development and Aging of the Nervous System Antonia Vernadakis, Alain M. Privat, Jean M. Lauder, Paola S. Timiras, 2012-12-06 The last decade has generated a multitude of studies using in vitro model systems to explore growth and differentiation of the nervous system Although the findings have been exciting and have revealed unique properties of neural cells considerable concern continues to be expressed regarding the significance of in vitro findings in terms of their applicability to in vivo biological events To examine this issue further a group of scientists presented and discussed their findings at a conference sponsored by the Institute of Developmental Neuroscience and Aging held in Crete Greece 26-29 May 1985 The conference was cosponsored by the University of Crete and was generously supported by the Ministry of Research and Technology of Greece Tourism Organization of Greece and also Sandoz and FIDIA The Directors of the Institute of Developmental Neuroscience and Aging are indebted to these Institutions for their support For the success of this conference the Directors owe much to Drs Eleni Fleischer Lambropoulos and Yiannis Tsouderos who spent countless hours in making arrangements so that the participants would have not only a scientific but also a unique cultural experience Several chapters of this book focus on the complex phenomena of neurogenesis and gliogenesis and the modulation of neuronal differentiation The concept that neuronal differentiation has both genetic and epigenetic components is documented by elegant studies using both in vitro cultured cells and neurons transplanted in vivo Aging and the Nervous System

Salvatore Giaquinto,1988-01-15 With modern advances in health care prolonging the average life span rehabilitation programs for the elderly are of increasing importance This book examines not only techniques for maintaining an older person s quality of life but also the process of rehabilitating those in whom the brain is damaged providing an authoritative account of the structural and neuropsychological changes that occur in the aging nervous system whether healthy or diseased It discusses such timely topics as the relationship between aging and dementia cognitive activity and personality neuropsychological training and medical treatment in a social context *Survey Report on the Aging Nervous System* ,1975

Download EPUB The deterioration of skeletal muscle performance e g declines in muscle strength and motor performance with advancing age has long been anecdotally recognized as Shakespeare pointed out nearly a half millennium ago in his monologue The Seven Ages of Man and has been of scientific interest for well over a century Over the past several decades the scientific and medical communities have recognized that reduced skeletal muscle performance is a debilitating and life threatening condition in the elderly For example the age associated loss of muscle strength as well as impairment in the ability to finely control movement is highly associated with physical disability and difficulty performing activities of daily living While the nervous system is widely recognized for its role in controlling skeletal muscle during motor function its role in determining the performance characteristics of aged skeletal muscle has largely been understudied Historically it was believed that these reductions in muscle performance were primarily resultant of age associated adaptations in skeletal muscle e g muscle atrophy However aging is associated with widespread qualitative and quantitative changes in both the central and peripheral nervous systems that are likely to influence numerous aspects of muscle performance such as muscle strength fatigue and motor control as well as mobility In this research topic we sought to examine a broad range of issues surrounding 1 the age related changes in nervous system anatomical physiological and biochemical changes in the central and or peripheral nervous systems 2 the functional role of these nervous system changes in contributing to altered skeletal muscle performance and or mobility and 3 physical and pharmacologic interventions that act via the nervous system to enhance muscle performance and or mobility Researchers and academicians engaged in aging neuroscience and or applied physiology research focused within the scope of this research topic were encouraged to contribute an original research article review article clinical case study hypothesis and theory article method article opinion article or technology report to this research topic Herein we present a series of outstanding articles within this scope of work including a last minute addition article from Wiesmeier Dalin and Maurer that is not mentioned in the editorial that we hope will help to vertically advance the intersecting fields of aging geriatrics and neuroscience Lastly as the editors we wish to thank all article contributors and peer reviewers for their efforts in contributing to this Research Topic journal issue book Additionally we would like to thank people everywhere who volunteer their time and body for human subjects research studies such that are presented herein It is the wonderful individuals who are willing to participate in experiments that make scientific exploration and health and medical advancements possible
