Aging In The Designed Environment:

Aging in the Designed Environment Margaret Christenson, Ellen D Taira, 2014-04-08 Aging in the Designed Environment is the key sourcebook for physical and occupational therapists developing and implementing environmental designs for the aging. The physical environment remains one of the most overlooked areas in environmental design. In order to move beyond this status quo, persons responsible for planning elderly environments must develop a new understanding of ways in which their influence can improve the older adult's physical and mental functioning. Occupational and physical therapists as well as other health care professionals will benefit tremendously from the information presented in this unique volume. Designers, developers, and others with minimal health care background will also find a wealth of possibilities within Aging in the Designed Environment. Many concerns are dealt with in the book's five sections. The first section describes the implications that occur when there are changes in vision, hearing, taste, smell, touch, and the kinesthetic systems. Recommendations for environmental adaptation and modifications which may compensate for the changes in each of these systems are suggested. The second section stresses the relationship between behavior and environment. A variety of environmental attributes—comfort, privacy, accessibility, control, security, dignity—and their impacts are discussed along with information on ways that attributes can be incorporated into the living settings of older people. In section three, the focus is on the older person living independently in his or her own home, and section four covers exclusively the design and selection of chairs for older adults. New ways to assess and evaluate the home to promote independence beyond the traditional activities of daily living are addressed. The last section deals with redesigning the existing long-term care facility. The author examines some of the environmental conditions existing in specific facilities and provides recommendations to compensate for these circumstances.

Smart Technologies and Design For Healthy Built Environments Ming Hu,2020-09-10 Smart Technologies and Design for Healthy Built Environment connects smart technology to a healthy built environmentthat

builds upon the sustainable building movement. It provides an overall summary of the state of the art technologies that are applied in the built environment. The book covers a broad spectrum of smart technology categories ranging from dynamic operability, energy efficiency, self-regulating and self-learning systems, and responsive systems. The foreseeable challenges that are associated with smart technologies are discussed and outlined in the book. Firstly, this book provides a snapshot of state of the art smart technologies being applied in the built environment. It covers a broad spectrum of smart technology categories ranging from dynamic operability, energy efficiency, self-regulating and self-learning systems to responsive systems. Secondly, this book provides an in-depth analysis of the four primary components of health: biological, physical, physiological, and psychological. Their effects on wellbeing and cognitive performance are introduced as well. Thirdly, it connects smart technologies to those health-influencing factors by reviewing three completed smart building projects. This book can also serve as a basis for education and discussion among professionals and students of diverse backgrounds who are interested in smart technologies, smart building, and healthy building. *Smart Technologies and Design for Healthy Built Environment* serves as the basis for education and discussions among professionals and students who are interested in smart technologies, smart building, and healthy building, as it bridges the gap between smart technologies and a healthy built environment. The book also provides a foundation for anyone who is interested in the impact of smart technology on the health of the built environment.

The Built Environment and Public Health Russell P. Lopez, 2012-01-03. THE BUILT ENVIRONMENT AND PUBLIC HEALTH. The Built Environment and Public Health explores the impact on our health of the environments we build for ourselves and how public health and urban planning can work together to build settings that promote healthy living. This comprehensive text covers origins and foundations of the built environment as a public health focus and its joint history with urban planning, transportation, and land use infrastructure, and natural disasters, assessment tools, indoor air quality, water quality, food security, health disparities, mental health, social capital, and environmental justice. The Built Environment and Public Health explores such timely issues as: Basics of the built environment and evidence for its influences; How urban planning and public health intersect; How infrastructure improvements can address chronic diseases and conditions; Meeting the challenges of natural disasters; Policies to promote walking and mass transit; Approaches to assess and improve air quality and our water supply; Policies that improve food security and change how Americans get their food; How the built environment can address needs of vulnerable populations; Evidence-based design practices for hospitals and health care facilities; Mental health stressors and health care environments; Theories and programs to improve social capital of low-income communities; How the built environment addresses issues of health equity and environmental justice. This important textbook and resource includes chapter learning objectives, summaries, questions for discussion, and listings of key terms. Environments Across Europe: North and South Elisa Pozo Menéndez, Ester Higuera García, 2022-09-29 This book represents a multidisciplinary and international vision across different countries in Europe that are facing similar challenges about ageing and quality of life in present cities. It is divided in three main topics: from the global context of health in cities and reduction of health inequities to the current research of different study cases focusing on residential models and the relationship with the built environment. The third chapter illustrates best practices with some study cases from different cities in Europe. Friendlier environments for older people come together with the need of innovation, smart and updated technologies, healthier environments and mitigation of climate change. Health reappears nowadays as one of the priorities for urban planning and design, not only for the communicable diseases and the effect of the pandemics but also for the non-communicable diseases that were also triggering the wellbeing and equity of our cities. Indeed, the Covid 19 pandemic has highlighted health inequities and vulnerabilities of those areas of the city that were already deprived and facing other health problems such as obesity, diabetes, social isolation, respiratory problems or mental health issues, specifically applying for vulnerable groups. Older adults have been one of the most affected groups from the pandemic's threats and derived consequences. In this context, the care crisis arises intertwined with the design and planning of our cities, where there is an urgent need to regenerate our environments with a perspective of sustainability, inclusion and health prevention and promotion. From the global urban challenges to the specific contextualisation of each city and study cases, each chapter offers an updated insight of the main questions that we should consider to address urban planning and design from the perspective of ageing and social inclusion in European cities.

Equity in the Urban Built Environment Bradley Bereitschaft, 2024-12-30 This book explores inequities in the urban built environment across a diverse range of places and considers practical solutions and strategies aimed at building more just, inclusive and sustainable cities. Achieving more equitable and prosperous urban places requires a critical examination of the design and layout of our cities. The 16 chapters of this book illuminate the ways in which the built environment, including buildings, roads, public spaces and other infrastructure, shapes our health and prosperity through a complex set of physical and social interactions. It brings together experts from a variety of fields to identify and suggest workable solutions for inequities in the spatial distribution of amenities and disamenities and the processes and policies that give rise to these unjust patterns. Blending scholarly knowledge and practical experience, many of these strategies and solutions are presented through the lens of real-world case studies. One key takeaway is that the planning of our cities should be a communal effort that properly reflects the needs of all residents. Equity in the built environment can only be realized when people of diverse backgrounds, ethnicities, ages and abilities feel welcome to both shape and enjoy the shared public realm. This book is intended for a wide audience that primarily includes scholars, students and professionals in the fields of urban geography, urban planning, landscape architecture and urban studies. Professionals in urban planning and policy with a desire to advance equity goals will likely appreciate the strategies, recommendations and
