Air Force Service Procurement Approaches For Measurement And Management:

Air Force Service Procurement Laura H. Baldwin, John A. Ausink, Nancy Nicosia, 2005 This research is based on a series of interviews with commercial sector purchasing professionals who are respected by their peers for their successful creation and implementation of what are widely accepted as best purchasing and supply management practices particularly in the area of service acquisitions The authors also examine such practices through conference participation and a review of the business literature They find that commercial firms rely on results oriented metrics that focus on how acquisition activities support corporate objectives to manage their service acquisition activities While not a commercial firm the Air Force can learn from commercial firms experiences in managing its service acquisitions The authors recommend a balanced portfolio of performance metrics for the Air Force based on the five major categories of results oriented metrics that appeared most often in their research cost quality supplier satisfaction implementation of new initiatives and special interest items

Commercial firms indicated that in addition to the results oriented metrics internal management metrics that track internal customer satisfaction personnel training and retention and ethics violations are also important Selected metrics are reported to top level executives on a regular basis Implementing Purchasing and Supply Chain Management Nancy Nicosia, Nancy Y. Moore, 2006 The U S Air Force plans to improve procurement through the implementation of additional purchasing and supply chain management practices This monograph begins with background information organized around the process for conducting market research and proceeds through the how to steps for conducting this research The authors highlight lessons learned from both a literature review and from interviews with personnel at leading commercial enterprises

Developing Tailored Supply Strategies Nancy Y. Moore, Clifford Anthony Grammich, Robert W. Bickel, 2007 Purchased goods and services are an increasingly large proportion of public and private enterprise budgets Historically purchased goods and services have accounted for less than a third of an enterprise s budget but today many enterprises spend more than two thirds of their budgets on purchased goods and services Similarly the Air Force and the Department of Defense DoD spend nearly half their budgets for purchased goods and services and an additional sixth on weapon procurement with only a third going to military and civilian personnel costs See pp 1 6 Because of the growing importance of purchasing many enterprises have sought to develop supply strategies for their purchased goods and services This monograph is intended as a resource for procurement personnel developing supply strategies for the Air Force or DoD It does not analyze current military procurement practices but rather synthesizes academic business and professional literature on developing and applying supply strategies Its core is a synthesis of nearly a dozen different processes found in the literature **Measuring**
