Adenosine And Adenine Nucleotides As Regulators Of Cellular Function:

Adenosine and Adenine Nucleotides As Regulators of Cellular Function John W. Phillis, 1991-06-14 This book provides valuable information for investigators interested in the signaling and regulatory functions of adenosine and the adenine nucleotides Topics covered in this comprehensive volume include the historical development of research on adenosine and adenosine triphosphate various aspects of the formation metabolism release transport and receptors for endogenous adenosine and the adenosine triphosphate functions of purines at the cellular level the role of adenosine in the regulation of flow in different vascular beds and angiogenesis The book also addresses the purinergic regulation of the cardiac renal gastro intestinal and central nervous system as well as potential therapeutic avenues for purine use The book will be valuable to physiologists pharmacologists and other basic and clinical scientists interested in updating their knowledge of the expanding biological roles of these substances

Regulatory Function of Adenosine Robert M. Berne, Theodore W. Rall, Rafael Rubio, 2012-12-06 The principal objective of this symposium was to bring together investigators from all over the world who work in diverse areas of research but share a common interest in the physiologic and pathophysiologic functions of the nucleoside adenosine In 1978 the International Conference on Physiological and Regulatory Functions of Adenosine and Adenine Nucleotides held in Banff Canada served as an effective catalyst in enabling scientists with different points of view to exchange information and ideas on this subject Since 1978 the amount of research on different aspects of adenosine metabolism mechanism of action transport and function in various tissues in both normal and abnormal states has increased exponentially and there was an urgent need for another meeting for updating information on this burgeoning subject The focus of the meeting was extremely sharp but the scope of the subject material was very broad Scientists categorized as chemists biochemists physiologists pharmacologists and immunologists working with cells and cell fragments with tissues such as heart brain muscle fat kidney and with human beings having immune deficiency diseases participated in the symposium They had an opportunity to air their differences reinforce their areas of agreement and most important they educated each other with respect to research on adenosine it is

hoped that they also enriched their own research programs from the information they gained from their fellow participants
