Adrenal In Toxicology Target Organ And Modulator Of Toxicity:

Adrenal in Toxicology Philip W. Harvey, 1996-03-28 The adrenal gland is vitally important to health and secretes hormones that control many bodily processes ranging from normal metabolism to the response to stressful circumstances. The corticosteroid hormones are the basis for anti-inflammatory medicines and are very widely prescribed. Changes in the function of the adrenal gland either naturally through stress or disease or through the action of drugs and chemicals can have a major impact on the body. This text focuses on adrenal toxicity, examining how drugs and chemicals can directly and indirectly affect this gland. Coverage includes classification of the types of adrenal and endocrine toxicity, the mechanistic and molecular basis of toxicity, reasons why the adrenal is the most common target organ in the endocrine system, drug toxicity specific to patients with adrenal disorders, drug-corticosteroid interactions, adverse drug reactions, and how the adrenal gland is vital in tolerance to toxic insult. **Adrenal Toxicology** Philip W. Harvey, David J. Everett, Christopher J.

Springall, 2008-10-22 Despite being regarded as the most common toxicological target in the endocrine system, the adrenal gland has often been neglected in regulatory testing. *Adrenal Toxicology* addresses the increased interest in adrenocortical toxicology and the need for a resource that makes techniques available to examine adrenal endocrine disruption. Examining current *Endocrine and Hormonal Toxicology* Philip W. Harvey, Kevin C. Rush, Andrew Cockburn, 1999-06-18 *Endocrine and Hormonal Toxicology* Edited by Philip W. Harvey, Kevin C. Rush, and Andrew Cockburn. AgrEvo UK Ltd, Saffron Walden, UK. This is the first book to consider the integrated role of the classical endocrine system and hormones, including those from tissues outside the classical endocrine system, in toxicological responses. Although focusing on the latest knowledge on endocrine glands as target organs and the mechanistic and molecular basis for toxicity in these organs, *Endocrine and Hormonal Toxicology* has been written to cover toxicological responses at the whole-body level mediated by endocrine or hormonal mechanisms. This whole-body, multi-organ approach significantly broadens the relevance of this volume to toxicologists. Following an introductory section on the types of endocrine toxicity, including primary, secondary, and indirect mechanisms, the next section deals with endocrine organs as toxicological targets. International contributions focus on the pituitary, thyroid, and parathyroids, adrenals, testes, ovaries, and the pancreas, and comparative endocrine carcinogenesis. A third section of the book develops the whole-body approach in which chapters are devoted to hormonal mechanisms of toxicity to the immune, nervous, cardiovascular, gastrointestinal, and reproductive systems, as well as to the liver, kidney, and skin. The final section covers human and environmental health perspectives, discussing endocrine-disrupting chemicals, hormonal mechanisms in breast cancer, and current regulatory trends in endocrine and hormonal toxicology. The comprehensive nature of *Endocrine and Hormonal Toxicology* makes it accessible to both specialist and general toxicologists and to those within the fields of endocrinology, pharmacology, and pathology. *Comprehensive Toxicology*, 2010-06-01 An explosive increase in the knowledge of the effects of chemical and physical agents on biological systems has led to an increased understanding of

normal cellular functions and the consequences of their perturbations The 14 volume Second Edition of Comprehensive Toxicology has been revised and updated to reflect new advances in toxicology research including content by some of the leading researchers in the field It remains the premier resource for toxicologists in academia medicine and corporations Comprehensive Toxicology Second Edition provides a unique organ systems structure that allows the user to explore the toxic effects of various substances on each human system aiding in providing diagnoses and proving essential in situations where the toxic substance is unknown but its effects on a system are obvious Comprehensive Toxicology Second Edition is the most complete and valuable toxicology work available to researchers today Contents updated and revised to reflect developments in toxicology research Organized with a unique organ system approach Features full color throughout Available electronically on sciencedirect com as well as in a limited edition print version

Drug Discovery and Evaluation: Safety and Pharmacokinetic Assays Franz J. Hock, Michael K. Pugsley, 2024-10-21 Many aspects of drug safety have become an outstanding and even persistent issue and may occur during the process of both drug discovery and development Until 15 years ago drug discovery and evaluation was primarily a sequential process starting with the selection of the most pharmacologically active compound from a series of newly synthesized small molecule chemical series by means of distinctive pharmacological assays Safety aspects were addressed by evaluation of the selected compound at high doses in a series of specific studies directed at indications other than the intended indication of the new compound These tests are then followed by pharmacokinetic studies which are primarily conducted to confirm whether the selected compound possesses a suitable half life for sufficient exposure and efficacy and whether it has the desired properties specificity to the intended route of administration Safety aspects relied predominantly on the conduct of single and repeat toxicology dose studies which inform changes in organ structure rather than organ function Both toxicological and pharmacokinetic studies are adapted to the progress of studies in clinical pharmacology and clinical trials The new edition of this well and broadly accepted reference work contains several innovative and distinguished chapters This sequential strategy has been abandoned with this new version of the book for several reasons Of the possible multitude of negative effects that novel drugs may impart on organ function e g ventricular tachy arrhythmia many are detected too late in non clinical studies to inform clinicians On the other hand negative findings in chronic toxicity studies in animals may turn out to be irrelevant for human beings New scientific approaches e g high throughput screening human pluripotent stem cells transgenic animals knock out animals in silico models pharmaco genomics and pharmaco proteomics as well as Artificial Intelligence AI methods offered new possibilities There are several examples that show that the druggability of compounds was considerably underestimated when the probability of success of a new project was assessed The success rate in the pharmaceutical industry and the introduction of new chemical entities to the market per year dropped dramatically whereas the development time for a new compound increased sometimes exceeding the patent protection Research and development scientists

involving the following changes therefore adopted a change of strategy Parallel instead of sequential involvement of the various disciplines multidimensional compound optimization The term Safety Pharmacology was coined The International Conference on Harmonization ICH founded a Safety Pharmacology Working Group and the Safety Pharmacology Society SPS was launched The discipline provided for evaluation development and validation of a multitude of safety tests outlined in the Core Battery of Studies Characterizing the exposure profile of a drug by conducting pharmacokinetic studies that evaluates the absorption distribution metabolism and excretion should to be investigated at an early stage of development as results contribute to the selection of a compound for further development Advancements in Toxicology were achieved by the introduction of new methods e g in silico methods genetic toxicology computational toxicology and AI The book is a landmark in the continuously changing world of drug research and developments As such it is essential reading for many groups not only for all students of pharmacology and toxicology but also for industry scientists and physicians especially those involved in clinical trials of drugs and for pharmacists who must know the safety requirements of drugs The book is essential for scientists and managers in the pharmaceutical industry who are involved in drug discovery drug development and decision making in the development process In particular the book will be of use to government institutions and committees working on official guidelines for drug evaluation worldwide *Drug Discovery and Evaluation* H. Gerhard Vogel, 2006 This book is a landmark in the continuously changing world of drugs It is essential reading for scientists and managers in the pharmaceutical industry who are involved in drug finding drug development and decision making in the development process

Reducing Animal Use in Carcinogenicity

Testing Joseph Manuppello, Jan Willem Van Der Laan, Federica Madia, 2024-12-31 Carcinogenicity to rats and mice is evaluated for substances to which humans are exposed including pharmaceuticals, agrochemicals and industrial chemicals. For pharmaceuticals, recent efforts to reduce animal use in long term studies include an addendum to the International Council for Harmonisation (ICH) guideline S1B R1 that prioritizes short term studies in transgenic mice and recommends assessing the weight of evidence available to first determine whether a long term study in rats would add value. For other sectors, an expert group of the Organisation for Economic Cooperation and Development (OECD) is developing an Integrated Approach to the Testing and Assessment (IATA) of non-genotoxic carcinogens based on common hallmarks of cancers and on key characteristics of carcinogens. Within current regulations, animal use could be reduced by evaluating toxicokinetics in main study animals with microsampling methods by including only one negative control group and by genotyping transgenic mice instead of using positive control groups in each study.
