Advanced Mathematical Methods for Scientists and Engineers I Carl M. Bender, Steven A. Orszag, 2013-03-09 The triumphant vindication of bold theories are these not the pride and justification of our life's work Sherlock Holmes The Valley of Fear Sir Arthur Conan Doyle The main purpose of our book is to present and explain mathematical methods for obtaining approximate analytical solutions to differential and difference equations that cannot be solved exactly Our objective is to help young and also established scientists and engineers to build the skills necessary to analyze equations that they encounter in their work Our presentation is aimed at developing the insights and techniques that are most useful for attacking new problems We do not emphasize special methods and tricks which work only for the classical transcendental functions we do not dwell on equations whose exact solutions are known The mathematical methods discussed in this book are known collectively as asymptotic and perturbative analysis These are the most useful and powerful methods for finding approximate solutions to equations but they are difficult to justify rigorously Thus we concentrate on the most fruitful aspect of applied analysis namely obtaining the answer We stress care but not rigor To explain our approach we compare our goals with those of a freshman calculus course A beginning calculus course is considered successful if the students have learned how to solve problems using calculus

Writing the perfect complement to their bestseller *Introducing Public Administration*, Shafritz and Borick highlight the great drama inherent in public policy and the ingenuity of its makers and administrators in this new casebook that brings thrilling true life adventures in public administration to life in an engaging, witty style. Drawing on a unique assortment of literary, historic and modern examples, *Cases in Public Policy and Administration* exposes students to public administration in practice by telling the tales of how Thurgood Marshall led the legal fight for civil rights and made it possible for Barack Obama to become president; how the ideas of an academic economist and a famous novelist led to the recession that started in 2008; how Al Gore really deserves just a little bit of credit for inventing the Internet; how the decision was made by President Harry Truman to drop the first atomic bomb on Japan in order to end World War II; how the current American welfare state was inspired by a German chancellor; how a Nazi war criminal inadvertently provided the world with a lesson in bureaucratic ethics; how Napoleon Bonaparte encouraged the job of chief of staff to escape from the military and live in contemporary civilian offices; how an obscure state department bureaucrat wrote the policy of containment that allowed the United States to win the Cold War with the Soviet Union; how Dwight D. Eisenhower was started on the road to the presidency by a mentor he found in the Panamanian rain forest; how Florence Nightingale gathered statistics during the Crimean War that helped lead to contemporary program evaluation.
