Addictive Disorders:

Addictive Disorders in Medical Populations Norman S. Miller, Mark S. Gold, 2011-07-26 This book has a much wider focus than traditional books written about drug and alcohol addictions. This unique book is written by medical specialists who diagnose, treat, and research addictive disorders in their specialties. Thus it meets the needs of the typical medical practitioner who wants to learn about and treat patients with addictive disorders in their practices. Because alcohol and drug problems are so prevalent and affect medical conditions profoundly, the medical specialist will improve their knowledge and skill to diagnose and treat addictive disorders in their specialties. Drug and alcohol addictions occur commonly in medical populations. 25-50% of patients seen by primary care physicians have alcohol and drug disorders, with even higher prevalence in certain medical specialty populations. Drug use, including illicit drug use and actual or perceived misuse of prescribed medications, alcohol use, and what has been called unhealthy drinking, are even more common in trauma centers and our society. Currently, there are no authoritative addiction texts that focus on the identification, intervention, and management of either addictive disorders in medical populations or medical complications in addiction populations. Neurobiological progress in the field of addiction has been amazing, and evidence-based treatments have developed at a phenomenal pace, with bench-to-office applications for tobacco, alcohol, and drugs. Pharmacological and psychosocial treatments are described here in detail and in practical terms. The medical and mental complications of addiction are explained comprehensively throughout the text. Clinical considerations are the predominant theme, with the standards of clinical practice grounded in the most current research. The chapters include practical presentations of both clinical and research materials, with instruments for screening and assessment and treatment. It will be useful for all those seeking information to help a patient or family with a tobacco, alcohol, or drug problem. We hope this book can give answers and direction to the identification and management of addictions and their medical complications in patient populations. [Clinical Textbook of Addictive Disorders](#) Avram H. Mack, Kathleen T. Brady, Sheldon I. Miller, Richard J. Frances, 2016-03-16 This state-of-the-science reference and text has given thousands of practitioners and students a strong foundation in understanding and treating addictive disorders. Leading experts address the neurobiology of addictions and review best practices in assessment and diagnosis. Specific substances of abuse are examined in detail, with attention to real-world clinical considerations. Issues in working with particular populations, including polysubstance abusers, culturally diverse patients, older adults, chronic pain sufferers, and others, are explored. Chapters summarize the theoretical and empirical underpinnings of widely used psychosocial and pharmacological treatments and clearly describe clinical techniques. New to This Edition: Incorporates a decade's worth of major advances in research and clinical practice. Updated for DSM-5. Many new authors extensively revised with the latest information on specific biological mechanisms, substances, populations, and treatments. Chapter on motivational interviewing. Exploring prevention strategies and treatment in addictive disorders Cristina Núñez, Sandra Montagud Romero, Francisco Jose Fernandez Gomez, Victoria Gomez-Murcia, 2025-02-28

Drug addiction is a chronic psychiatric disorder characterized by escalating compulsive drug seeking and drug using behaviors and by recurrent relapses constituting a major socioeconomic burden to society. Several brain regions and neurocircuits have been shown to play important roles in addiction related behavioral alterations. Initially abused substances activate the reward system leading to pleasurable effects that reinforce their consumption. When drug intake is repeated these drug rewarding effects gradually diminish while the aversive emotional state that arises in addicts when the abused compound is absent which is prompted by the stimulation of the anti-reward brain system provokes the subsistence of drug use. Eventually drug intake becomes compulsive due to a loss of self control over behavior. In addition relapse in drug use is a common feature of this disorder. Among the factors that contribute to the vulnerability to enter the addiction cycle as well as to the reinstatement of drug seeking behavior are genes, stress and environmental or conditioning factors. Regardless of more than 70 years of

research the cellular and molecular alterations elicited by addictive drugs in the brain and their consequences in the organization of neurocircuits are not fully understood The initial exposure to the drug is essential for the development of the addictive disorder Nonetheless only a low percentage of the population that ever uses drugs becomes an addict highlighting the relevant role of the interactions between addictive compounds and the biological or environmental risk factors Besides the rate of relapses in drug use has remained stable for the last four decades Hence a deeper knowledge of the molecular and cellular processes underpinning the addiction cycle will clearly aid to improve the effectiveness of therapeutic strategies to prevent the reinstatement of drug use as well as to develop new psychological and or pharmacological treatments The aim of this Research Topic is to progress in the knowledge of the cellular and molecular adaptive changes evoked by drugs of abuse and the risk factors that increase the vulnerability to enter the addiction cycle as well as to uncover new therapeutic approaches for its treatment Vulnerability factors involved in drug use and relapses Brain cellular and molecular mechanisms underlying the addiction stages Peripheral alterations induced by abused substances Psychological pharmacological and environmental interventions for the treatment of substance use disorder Eating Disorders, Addictions and Substance Use Disorders Timothy D. Juhnke, W. Bryce Hagedorn, 2013-08-16 Although one person s addiction almost inevitably affects his or her family members a surprising number of treatment models appear to operate under the assumption that an individual s addiction occurs in a vacuum By not paying sufficient attention to preexisting family dynamics whether dysfunctional supportive or somewhere in between counselors run the risk of not fully understanding the roots of an individual s addictions or the obstacles to his recovery as a result counselors may undermine their own treatment efforts both

by neglecting any underlying family problems and by failing to capitalize upon a family's potential assistance in an intervention with the addicted individual. In *Counseling Addicted Families*, Gerald A. Juhnke and William Bryce Hagedorn address this problem head on. Recognizing that even those treatment providers who understand the importance of the familial context of addiction are often stymied by the variety of family treatment theories and their often imperfect fit for cases of addiction, Juhnke and Hagedorn provide a truly integrated model for assessment and treatment. Based upon the authors' combined 23 years of experience in clinical and treatment supervision, the Integrated Family Addictions Model consists of six progressive treatment tiers which organize the relevant family treatment theories into a graduated and coherent sequence beginning with the briefest and least costly forms of therapy. If one of the lower tiers allows clients to reach their treatment goals, the patient and therapist need not waste time and resources following the full continuum. If, however, their needs are still unmet, they can progress in a logical fashion to more advanced and intensive forms of therapy. The book is divided into three broad topic areas designed to provide counselors and graduate students with essential information both about addictions and about the practical applications of various treatment theories. Part One discusses the prevalence of addictions, their negative impact upon families, and the primary existing addiction treatment models, including their limitations and benefits. Part Two outlines methods of assessment for individual cases, and Part Three presents the Integrated Family Addictions Model in detail. Along the way, the authors deal with specific interventions for families dealing with violence and dual diagnosis. The book concludes with an epilogue on professional training, which includes an overview of the major professional addiction and marriage and family counseling organizations and the ways in which they might benefit individual practices and practitioners.
