Cohadon,V. V. Dolenc,J. Lobo Antunes,H. Nornes,J. D. Pickard,H.-J. Reulen,A. J. Strong,N. de Tribolet,C. A. F. Tulleken,2012-12-06 As an addition to the European postgraduate training system for young neurosurgeons we began to publish in 1974 this series of Advances and Technical Standards in Neurosurgery which was later sponsored by the European Association of Neurosurgical Societies This series was first discussed in 1972 at a combined meeting of the Italian and German Neurosurgical Societies in Taormina the founding fathers of the series being Jean Brihaye Bernard Pertuiset Fritz Loew and Hugo Krayenbühl Thus were established the principles of European co operation which have been born from the European spirit flourished in the European Association and have throughout been associated with this series The fact that the English language is well on the way to becoming the international medium at European scientific conferences is a great asset in terms of mutual understanding Therefore we have decided to publish all contributions in English regardless of the native language of the authors All contributions are submitted to the entire editorial board before publication of any volume Our series is not intended to compete with the publications of original scientific papers in other neurosurgical journals Our intention is rather to present fields of neurosurgery and related areas in which important recent advances have been made The contributions are written by specialists in the given fields and constitute the first part of each volume *Endocrine System* Thomas C. Jones,Charles C. Capen,Ulrich Mohr,2012-12-06 Approximately 10 years have elapsed since the first volume of the International Life Sciences Institute ILSI Monographs on Pathology of Laboratory Animals Endocrine System was completed New information of interest to pathologists has developed at a rather remarkable pace during the intervening years Exceptional progress has been made in the routine identification of cell products in endocrine cells A better understanding has developed of the mechanisms involved in cell metabolism particularly involving toxins and carcinogens Clear concepts have developed concerning the significance of some pathologic lesions in the endocrine system and their relation to human health and risk assessment Standardized nomenclature has developed significantly during the 10 year period since the first volume and is being utilized on an international basis This has resulted in significant improvement in communication of pathologic data to regulatory agencies and in scientific publications worldwide This

monograph series and others sponsored by ILSI have produced a significant effect on improved communications and the international acceptance of standardized nomenclature In this second edition new formats have been used where more appropriate for the subjects to be covered In many cases the format used in the first edition still is useful It is still necessary to recognize the morphologic features of pathologic lesions in order to identify them precisely an essential step toward development of new insights into pathogenetic mechanisms and their use in decisions eventually applicable to public health
