Advanced Combustion Science:

Advanced Combustion Science Tsuneo Someya, 2012-12-06 Non uniform combustion as encountered in diesel and gas turbine engines furnaces and boilers is responsible for the conversion of fossil fuel to energy and also for the corresponding formation of pollutants In spite of great research efforts in the past the mechanism of non uniform combustion has remained less explored than that of other combustion types since it consists of many mostly transient processes which influence each other In view of this background a group research project Exploration of Combustion Mechanism was established to explore the mechanism of combustion especially that of diffusive combustion and also to find efficient ways to control the combustion process for better utilization of fuel and the reduction of pollutant emission The group research was started after preparatory activity of 2 years in April 1988 for a period of 3 years as a project with a Grant in Aid for Scientific Research of Priority Area subsidized by the Ministry of Education Science and Culture of Japan The entire group of 43 members was set up as an organizing committee of 13 members and five research groups consisting of 36 members The research groups were 1 Steady combustion 2 Unsteady spray combustion 3 Control of combustion 4 Chemistry of combustion and 5 Effects of fuels At the beginning of the project it was agreed that we should pursue the mechanism of combustion from a scientific viewpoint namely the target of the project was to obtain the fundamentals or know why rather than know how of combustion

Advanced Combustion Science Tsuneo Someya, 1993-04-01 The results of group research projects which include participants from Europe and the USA are reported in this volume The collaborative projects started in 1988 with the goals of improving fuel utilization and reducing pollutant emissions
