Breeding Research on Aromatic and Medicinal Plants Christopher B Johnson, Chlodwig Franz, 2002-10-08. The field of medicinal aromatic plant breeding is growing and changing; this resource will help you stay up to date. In this essential book, researchers from large and small laboratories and institutions throughout Europe and the Mediterranean region explore recent developments in the selection and breeding of aromatic and medicinal plants. They take varied approaches from traditional breeding to the use of molecular markers and complement them with up to date information on biodiversity and resource conservation. From the editors: It is widely recognized that a strategy of conservation through use by which plant collection via wild harvesting is replaced by controlled cultivation is the best way forward if we are to balance human demands with the necessary conservation of the biodiversity represented by these species. That provides one major driving force for research in this field. Another concern is the very real need for improving the quality control of products on the market both to satisfy consumer demand and to conform with the justifiably increasing requirements for standardization and precise identification of the composition of the plant materials being sold for human use. We hope that this volume will give readers a taste of the exciting developments in the field. ***Breeding Research on Aromatic and Medicinal Plants*** examines breeding for resistance and abiotic factors, manipulating natural product accumulation through genetic engineering, biochemical and molecular regulation of essential oil accumulation, economic and legal considerations that breeders will encounter, the ethical aspects of breeding these plants.

Medicinal and Aromatic Plants of the World Ákos Máthé, 2015-09-30. Medicinal and aromatic plants (MAPs) have accompanied mankind from its very early beginnings. Their utilization has co-evolved with *Homo sapiens* itself, bringing about a profound increase in our scientific knowledge of these species, enabling them to be used in many facets of our life, e.g. pharmaceutical products, feed and food additives, cosmetics, etc. Remarkably, despite the new renaissance of MAPs usage, ca. 80 % of the world's population is relying on natural substances of plant origin, with most of these botanicals sourced from the wild state. This first volume and ultimately the series provides readers with a wealth of information on medicinal and aromatic plants.
