Arrow From Earth:

Planets, Stars, and Orbs Edward Grant, 1996-07-13 Edward Grant describes the extraordinary range of themes ideas and arguments that constituted scholastic cosmology for approximately five hundred years from around 1200 to 1700 Primary emphasis is placed on the world as a whole what might lie beyond it and the celestial region which extended from the Moon to the outermost convex surface of the cosmos *The Foundations of Modern Science in the Middle Ages* Edward Grant, 1996-10-28 Contrary to prevailing opinion the roots of modern science were planted in the ancient and medieval worlds long before the Scientific Revolution of the seventeenth century Indeed that revolution would have been inconceivable without the cumulative antecedent efforts of three great civilisations Greek Islamic and Latin With the scientific riches it derived by translation from Greco Islamic sources in the twelfth and thirteenth centuries the Christian Latin civilisation of Western Europe began the last leg of the intellectual journey that culminated in a scientific revolution that transformed the world The factors that produced this unique achievement are found in the way Christianity developed in the West and in the invention of the university in 1200 As this 1997 study shows it is no mere coincidence that the origins of modern science and the modern university occurred simultaneously in Western Europe during the late Middle Ages *Physical Science in the Middle Ages* Edward Grant, 1977 This concise introduction to the history of physical science in the Middle Ages begins with a description of the feeble state of early medieval science and its revitalization during the twelfth and thirteenth centuries as evidenced by the explosion of knowledge represented by extensive translations of Greek and Arabic treatises The content and concepts that came to govern science from the late twelfth century onwards were powerfully shaped and dominated by the science and philosophy of Aristotle It is therefore by focussing attention on problems and controversies associated with Aristotelian science that the reader is introduced to the significant scientific developments and interpretations formulated in the later Middle Ages The concluding chapter presents a new interpretation of the medieval failure to abandon the physics and cosmology of Aristotle and explains why despite serious criticisms they were not generally repudiated during this period As detailed critical bibliography completes the work *Climatic Change* John Gribbin, 1978-02-23 Describes present understanding of climatic change **The Strategic Role of Perigean Spring Tides in Nautical History and North American Coastal Flooding, 1635-1976** Fergus J. Tsawalk E. Richard Atleo,2024-03-20 Western philosophy has long held scientific rationalism in a place of honour Reason that particularly exalted human quality has become steadily distanced from the metaphysical aspects of existence such as spirit faith and intuition In Tsawalk hereditary chief Umeek introduces us to an alternative indigenous worldview an ontology drawn from the Nuuchah Nulth origin stories Umeek develops a theory of Tsawalk meaning one that views the nature of existence as an integrated and orderly whole and thereby recognizes the intrinsic relationship between the physical and spiritual By retelling and analyzing the origin stories of Son of Raven and Son of Mucus Umeek demonstrates how Tsawalk provides a viable theoretical alternative that both complements and expands the view of reality presented by Western science Tsawalk he argues allows both Western and indigenous views to be combined in order to advance our understanding of the universe In addition he shows how various fundamental aspects of Nuuchah Nulth society are based upon Tsawalk and what implications it has today for both Native and non Native peoples A valuable contribution to Native studies anthropology and philosophy Tsawalk offers a revitalizing and thoughtful complement to Western scientific worldviews The Flaming Sword ,1920 Chertsey Worthies Library ,1878 **The Discovery of Dynamics** Julian B.

Barbour, 2001-09-06 Ever since Newton created dynamics there has been controversy about its foundations Are space and time absolute Do they form a rigid but invisible framework and container of the universe Or are space time and motion relative If so does Newton's framework arise through the influence of the universe at large as Ernst Mach suggested Einstein's aim when creating his general theory of relativity was to demonstrate this and thereby implement Mach's Principle However it is widely believed that he achieved only partial success This question of whether motion is absolute or relative has been a central issue in philosophy the nature of time has perennial interest Current attempts to create a quantum description of the whole universe keep these issues at the cutting edge of modern research Written by the world's leading expert on Mach's Principle The Discovery of Dynamics is a highly original account of the development of notions about space time and motion Widely praised in its hardback version it is one of the fullest and most readable accounts of the astronomical studies that culminated in Kepler's laws of planetary motion and of the creation of dynamics by Galileo Descartes Huygens and Newton Originally published as Absolute or Relative Motion Vol 1 The Discovery of Dynamics Cambridge The Discovery of Dynamics provides the technical background to Barbour's recently published The End of Time in which he argues that time disappears from the description of the quantum universe An Elementary Handbook of Physica William Rossiter, 1871
