## Arrangement In Literature:

*Literature's Elsewheres* Annette Gilbert, 2022-04-05 An examination of a series of diverse radical and experimental international works from the 1950s to the present What is a literary work In *Literature's Elsewheres* Annette Gilbert tackles this question by deploying an extended concept of literature examining a series of diverse radical experimental works from the 1950s to the present that occupy the liminal zone between art and literature These works by American Artist Allison Parrish Natalie Czech Stephanie Syjuco Fiona Banner Elfriede Jelinek Dan Graham Robert Barry George Brecht and others represent a pluralized literary practice that imagines a different literature emerging from its elsewheres Investigating a work's coming into being its transition from text to work as a social object and pragmatic category of literary communication Gilbert probes the assumptions and foundations that underpin literature including the ideologies and power structures that prop it up She offers a snapshot from a period of recent literary and art history when such central concepts as originality and authorship were questioned and experimental literary practices ranged from concrete poetry and Oulipo to conceptual writing and appropriation literature She examines works that are dematerialized site specific unique copies of other works and institutional critiques Considering the inequalities exclusions and privileges inscribed in literature she documents the power of experimental literature to attack these norms and challenges the field's canonical geographic boundaries by examining artists with roots in North and South America East Asia and Western and Eastern Europe The cross pollination of literary and art criticism enriches both fields With *Literature's Elsewheres* Gilbert explores what art can't see about the literary and what literature has overlooked in the arts

*Topics in Hyperplane Arrangements* Marcelo Aguiar, Swapneel Mahajan, 2017-11-22 This monograph studies the interplay between various algebraic geometric and combinatorial aspects of real hyperplane arrangements It provides a careful organized and unified treatment of several recent developments in the field and brings forth many new ideas and results It has two parts each divided into eight chapters and five appendices with background material Part I gives a detailed discussion on faces flats chambers cones gallery intervals lunes and other geometric notions associated with arrangements The Tits monoid plays a central role Another important object is the category of lunes which generalizes the classical associative operad Also discussed are the descent and lune identities distance functions on chambers and the combinatorics of the braid arrangement and related examples Part II studies the structure and representation theory of the Tits algebra of an arrangement It gives a detailed analysis of idempotents and Peirce decompositions and connects them to the classical theory of Eulerian idempotents It introduces the space of Lie elements of an arrangement which generalizes the classical Lie operad This space is the last nonzero power of the radical of the Tits algebra It is also the socle of the left ideal of chambers and of the right ideal of Zie elements Zie elements generalize the classical Lie idempotents They include Dynkin elements associated to generic half spaces which generalize the classical Dynkin idempotent Another important object is the lune incidence algebra which marks the beginning of noncommutative M

bius theory These ideas are also brought upon the study of the Solomon descent algebra The monograph is written with clarity and in sufficient detail to make it accessible to graduate students It can also serve as a useful reference to experts
