Comparative Dosimetry of Radon in Mines and Homes National Research Council, Division on Earth and Life Studies, Commission on Life Sciences, Board on Radiation Effects Research, Panel on Dosimetric Assumptions Affecting the Application of Radon Risk Estimates, 1991-02-01

Studies of underground miners have provided a wealth of data about the risk of lung cancer from exposure to radon's progeny elements but the application of the miner data to the home environment is not straightforward In *Comparative Dosimetry of Radon in Mines and Homes* an expert committee uses a new dosimetric model to extrapolate to the home environment the risk relationships found in the miner studies Important new scaling factors are developed for applying risk estimates based on miner data to men women and children in domestic environments The book includes discussions of radon dosimetry and the uncertainties concerning other risk factors such as age and smoking habits The book also contains a thorough technical discussion of the characteristics of radioactive aerosols in domestic environments the dose of inhaled radon progeny to different age groups identification of respiratory tract cells at the greatest risk of carcinogenesis and a complete description of the new lung dose model being developed by the International Commission on Radiological Protection as modified by this committee

Health Risks of Radon and Other Internally Deposited Alpha-Emitters National Research Council, Division on Earth and Life Studies, Commission on Life Sciences, Committee on the Biological Effects of Ionizing Radiations, 1988-02-01

This book describes hazards from radon progeny and other alpha emitters that humans may inhale or ingest from their environment In their analysis the authors summarize in one document clinical and epidemiological evidence the results of animal studies research on alpha particle damage at the cellular level metabolic pathways for internal alpha emitters dosimetry and microdosimetry of radionuclides deposited in specific tissues and the chemical toxicity of some low specific activity alpha emitters Techniques for estimating the risks to humans posed by radon and other internally deposited alpha emitters are offered along with a discussion of formulas models methods and the level of uncertainty inherent in the risk estimates

Risk Assessment in Setting National Priorities James J. Bonin, Donald E. Stevenson, 2013-03-08 The growing perception of the public and politicians that life is extremely risky has led to a dramatic and increasing interest in risk analysis The risks may be very diverse as demonstrated by the range of subjects covered at the annual meetings of the Society for Risk Analysis There is a need to pause and see how well the present approaches are serving the nation The theme Setting National Priorities which was chosen for the 1987 SRA Annual Meeting reflects the concern that in dealing with individual kinds of risks society may be more concerned with the trees than the forest It is surprising how little attention is being given to the holistic aspects of risk Who for instance is responsible for a national strategy to manage the reduction of health or other risks Individual agencies have the responsibility for specific patterns of exposure but these are not integrated and balanced to determine how the nation as a whole can obtain the greatest benefit for the very large investment which is made in risk related research and analysis

Environmental Radon C. Richard Cothorn, James E. Smith Jr., 2013-11-21 This volume is intended for the professional who is a newcomer to the area of environmental radon It marks the first time that chapters on these subjects have been brought together in a single volume and it is arranged so that anyone with some basic university level chemistry and physics can develop a clear understanding of the different aspects involved The volume is intended to serve as a supplementary textbook in public health environmental and health physics courses It also can be used by the professional to get up to speed in this rapidly evolving field The chapters are not necessarily a discussion of the latest research in this fast moving field but are intended to bring the reader to a level at which he can easily understand the current literature At the back of this volume the reader will find the references for the individual chapters a general list of reading materials a glossary an appendix describing the equations for radioactive decay for a series of progeny a table of often used conversion factors and the addresses and brief biographies of the authors and editors Both historical and SI International System units are used throughout the book to provide information for the widest range of readers Thanks go to Tom Hess for the idea for this volume and to Jessica Barron for help

Radiation Carcinogenesis and DNA Alterations Frederic J. Burns, 2013-03-13 This volume is based on the proceedings of an Advanced Study Institute ASI sponsored by the North Atlantic Treaty Organization NATO held October 1984 in Corfu Greece The meeting received financial support from the United States Department of Energy and the United States National Cancer Institute A plethora of recent developments in the molecular biology of DNA are leading to new ideas concerning how DNA alterations might be involved in the mechanism of radiation carcinogenesis Evidence is accumulating that genetic sequences known as oncogenes are involved in the translation of DNA molecular alterations into phenotypic changes associated with malignant cells For example a chromosome break often occurs at or near the location of a specific oncogene in Burkitt's lymphoma Such breaks could represent initial lesions in a translocation process that activates the oncogene by inserting it at a new location eg near an active promoter Since breakage of the DNA is one of the principal ways that ionizing radiation affects mammalian cells these new molecular ideas suggest ways that radiation induced DNA breaks might be involved as initial events in carcinogenesis While the possible involvement of oncogenes in radiation carcinogenesis is an exciting new development a direct sequential connection between early molecular changes in DNA and later tumor development has yet to be established Accordingly there is a tremendous need for experimental studies of how DNA alterations might convert normal cells to cancer cells

Radon and Its Decay Products in Indoor Air William W. Nazaroff, Anthony V. Nero, 1988-02-08 In recent years the perception of indoor radon as a relatively minor health issue has been radically altered observations in Sweden Canada and the U S have revealed the high incidence of elevated radon levels in ordinary houses and the extreme hazard of inhaling radon decay products These findings have led to a wide range of activities and intensive research aimed at limiting human exposure to radon This is one of the few books to provide a comprehensive insightful analysis of the radon problem Papers

reflecting the most current research critically review all major aspects of this issue each providing sufficient detail to be accessible to those who are technically trained but lack prior direct experience Coverage includes the generation and migration of radon in source material the physical and chemical behavior of radon current evidence on the health effects and risk of exposure and the strategic and tactical aspects of controlling exposures Respiratory Tract Dosimetry R.
