

Strategic objective *Anticipating new domains of global action*

- This point is regarding to so-called “new domains” as conventional weapons, WMD, space militarization, and cyberspace/cyberwar,
- But these areas and their integration, are not discussed in the report. It focused instead on preventive measure through legal instruments when the space militarization is in progress, nuclear disarmament only has been carried out by US and UK/France, and EU WMD strategy (EU Non Proliferation policy) has not worked properly, about all in Iran's case
- Finally, Cyberspace is absent from the point related to security challenges or threats. It is not seen as a security threat.

the lens of technogeopolitics It is shown how the political and military interests of each affect their negotiating positions in the WSIS The methods of content analyses on material from diplomatic archives participant observation at international conferences and interview surveys of participants at these conferences are used to investigate the reasons why decision are made or not made in the field of international cybersecurity cooperation **No Shortcuts** Max Smeets,2022-06-02 Over the past decade numerous states have declared cyberspace as a new domain of warfare sought to develop a military cyber strategy and establish a cyber command These developments have led to much policy talk and concern about the future of warfare as well as the digital vulnerability of society No Shortcuts provides a level headed view of where we are in the militarization of cyberspace In this book Max Smeets bridges the divide between technology and policy to assess the necessary building blocks for states to develop a military cyber capacity Smeets argues that for many states the barriers to entry into conflict in cyberspace are currently too high Accompanied by a wide range of empirical examples Smeets shows why governments abilities to develop military cyber capabilities might change over time and explains the limits of capability transfer by states and private actors Cyberwar and Revolution Nick Dyer-Witthford,Svitlana Matviyenko,2019-03-12 Uncovering the class conflicts geopolitical dynamics and aggressive capitalism propelling the militarization of the internet Global surveillance computational propaganda online espionage virtual recruiting massive data breaches hacked nuclear centrifuges and power grids concerns about cyberwar have been mounting rising to a fever pitch after the alleged Russian hacking of the U S presidential election and the Cambridge Analytica scandal Although cyberwar is widely discussed few accounts undertake a deep critical view of its roots and consequences Analyzing the new militarization of the internet Cyberwar and Revolution argues that digital warfare is not a bug in the logic of global capitalism but rather a feature of its chaotic disorderly unconscious Urgently confronting the concept of cyberwar through the lens of both Marxist critical theory and psychoanalysis Nick Dyer Witthford and Svitlana Matviyenko provide a wide ranging examination of the class conflicts and geopolitical dynamics propelling war across digital networks Investigating the subjectivities that cyberwar mobilizes exploits and bewilders and revealing how it permeates the fabric of everyday life and implicates us all in its design this book also highlights the critical importance of the emergent resistance to this digital militarism hacktivism digital worker dissent and off the grid activism for effecting different better futures The Decision to Attack Aaron Franklin Brantly,2016 Brantly investigates how states decide to employ cyber in military and intelligence operations against other states and how rational those decisions are He contextualizes broader cyber decision making processes into a systematic expected utility rational choice approach to provide a mathematical understanding of the use of cyber weapons War Virtually Roberto J. Cybercrime technical hacking and disinformation are complementary tools to preserve national power internally while projecting effects onto myriad neighbors and rivals Russian activity in the cyber domain is infamous in the United States and other Western countries *Weaponizing Cyberspace* explores the Russian proclivity particularly in the 21st century for using cyberspace as an environment in which to launch technical attacks and disinformation campaigns that sow chaos and distraction in ways that provide short term advantage to autocrats in the Kremlin Arguing that Russia's goal is to divide people Sambaluk explains that Russia's modus operandi in disinformation campaigning is specifically to find and exploit existing sore spots in other countries In the U S this often means inflaming political tensions among people on the far left and far right Russia's actions have taken different forms including the sophisticated surveillance and sabotage of critical infrastructure the ransoming of data by criminal groups and a welter of often mutually contradictory disinformation messages that pollute online discourse within and beyond Russia Whether deployed to contribute to hybrid war or to psychological fracture and disillusionment in targeted societies the threat is real and must be understood and effectively addressed

Cybernetics, Warfare and Discourse Anthimos Alexandros Tsirigotis, 2017-03-10 This book critiques mainstream beliefs about cyberwarfare and forges a new path in the way of defining this largely misunderstood concept Rather than outlining cyberspace as a new technology applied in military operations here Tsirigotis rallies against this technocentric account and establishes how cyberspace first and foremost should be categorized as a new way to understand war and military power in the Information Age Using genre analysis and Corpus Linguistics the author scrutinizes how cyberspace has changed the way the UK comprehends war and military power and how the cybernetisation of war has manifested itself in Britain's approach to national defense and security

Defending Cyberspace and Other Metaphors, 1997 Information warfare as any casual observer of the Pentagon can attest remains a hot button topic in the military community Broader claims for it have been toned down and few now argue that all aspects of warfare are now revealed as information warfare but an ideology of information warfare has nevertheless wended its way into the heart of defense planning The Air Force's Cornerstones of Information Warfare for example has approached the status of doctrine The spring 1996 establishment of the 609th Squadron at Shaw Air Force Base dedicated to information warfare offers further evidence of the seriousness with which that ideology is maintained In 1996 the National Defense University NDU ended its two year experiment of offering a forty four week program on Information Warfare and Strategy after forty eight students were graduated but what has replaced it is a broader thrust in teaching the all four hundred students the rudiments of information warfare and offering related electives In 1995-96 large portions of the Defense budget were designated information operations although only a small portion represents information warfare

Warfare Sanjeev Relia, 2015-11-01 Each era brings with it new techniques and methods of waging a war While military scholars and experts have mastered land sea air and space warfare time has come that they studied the art of cyberwar too Our neighbours have acquired the capabilities to undertake this new form of asymmetric form of warfare India too therefore needs to acquire the capabilities to counter their threat Cyber space seems to have invaded every aspect of our life More and more systems whether public or private are getting automated and networked This high dependence of our critical infrastructure on Information and Communication Technology exposes it to the vulnerabilities of cyberspace Enemy now can target such infrastructure through the cyberspace and degrade destroy them This implies that the critical information infrastructure of the country and military networks today are both equally vulnerable to enemy s cyberattacks India therefore must protect its critical information infrastructure as she would protect the military infrastructure in the battlefield Public Private Partnership model is the only model which would succeed in doing so While the Government needs to lay down the policies and frame the right laws private sector needs to invest into cyber security Organisations at national level and at the level of armed forces need to be raised which can protect our assets and are also capable of undertaking offensive cyber operations This book is an attempt to understand various nuances of cyber warfare and how it affects our national security Based on the cyber threat environment the books recommends a framework of cyber doctrine and cyber strategies as well as organisational structure of various organisations which a nation needs to invest in Cyberspace and the Use of Force Walter Gary Sharp, 1999 @War Shane Harris, 2015-11-03 Cloak and dagger high tech and big business converge in this revelatory page turning account of a new kind of conflict less visible but more invasive than any war America has fought before *Cyber Warfare* Paul J. Springer, 2020-07-08 Providing an invaluable introductory resource for students studying cyber warfare this book highlights the evolution of cyber conflict in modern times through dozens of key primary source documents related to its development and implementation This meticulously curated primary source collection is designed to offer a broad examination of key documents related to cyber warfare covering the subject from multiple perspectives The earliest documents date from the late 20th century when the concept and possibility of cyber attacks became a reality while the most recent documents are from 2019 Each document is accompanied by an introduction and analysis written by an expert in the field that provides the necessary context for readers to learn about the complexities of cyber warfare The title s nearly 100 documents are drawn primarily but not exclusively from government sources and allow readers to understand how policy strategy doctrine and tactics of cyber warfare are created and devised particularly in the United States Although the U S is the global leader in cyber capabilities and is largely driving the determination of norms within the cyber domain the title additionally contains a small number of international documents This invaluable work will serve as an excellent starting point for anyone seeking to understand the nature and character of international cyber warfare **Cyber Warfare** Johann-Christoph Woltg, 2014 Originally presented as author s thesis doctoral University of Hamburg 2013 *On Cyber*

Warfare Paul Cornish, 2010 This report argues that national strategy must be reviewed and adapted if it is to take proper account of cyber warfare The report's key findings include Cyber warfare can enable actors to achieve their political and strategic goals without the need for armed conflict Cyberspace gives disproportionate power to small and otherwise relatively insignificant actors Operating behind false IP addresses foreign servers and aliases attackers can act with almost complete anonymity and relative impunity at least in the short term In cyberspace the boundaries are blurred between the military and the civilian and between the physical and the virtual and power can be exerted by states or non state actors or by proxy Cyberspace should be viewed as the fifth battlespace alongside the more traditional arenas of land air sea and space Cyber warfare is best understood as a new but not entirely separate component of this multifaceted conflict environment The transatlantic relationship is important for a variety of reasons where cyber warfare is concerned Close cooperation between the United States and the United Kingdom in intelligence and military matters has extended into cyberspace enabling both states to influence the domain in a way that is difficult if not impossible for any other bilateral partnership or alliance to match

The Militarisation of Cyber Security as a Source of Global Tension Myriam Dunn Cavelty, 2015 Cyber security is seen as one of the most pressing national security issues of our time Due to sophisticated and highly publicized cyber attacks most prominently among them the sabotaging computer worm Stuxnet it is increasingly framed as a strategic military concern The result of this perception is too much attention on the low probability of a large scale cyber attack a focus on the wrong policy solutions and a detrimental atmosphere of insecurity and tension in the international system Though cyber operations will be a significant component of future conflicts the role of the military in cyber security will be limited and needs to be carefully defined

Defending Cyberspace, and Other Metaphors Martin C. Libicki, 1997-01 Information warfare as any casual observer of the Pentagon can attest remains a hot button topic in the military community Thus does war follow commerce into cyberspace pitting foes against one another for control of this clearly critical high ground But does this facile comparison have a basis in reality In this iconoclastic spirit the six essays in this book are characterized by a continuing search for the meaning of information warfare
