Embryology of Angiosperms Sant Saran Bhojwani, Woong-Young Soh, 2013-04-17 During the last two decades the modern techniques of histochemistry electron microscopy plant physiology biochemistry cell and molecular biology immunology and genetics have been applied to investigate the intricacies of the processes involved in embryo formation and considerable new information has been generated A better understanding of these processes has enhanced our capacity to manipulate fertilization and embryo development This has changed the face of the embryology of angiosperms from a descriptive science to an experimental and applied science The revolutionary progress made in this fascinating field of sexual reproduction was the motivation to prepare this volume It includes 21 chapters written by experts who have made substantial contributions to their respective fields It covers all aspects of the embryology of angiosperms ranging from development isolation and structure of male and female gametes their fusion in vivo and in vitro and structure physiology and genetics of zygotic embryogenesis to endosperm and seed development Advances in somatic embryogenesis synthetic seed technology and regeneration of haploid plants from male and female gametophytes are discussed Other important topics covered in this volume are sexual incompatibility parthenocarpy and apomixis The last chapter deals with the embryological perspective of inheritance of extra nuclear genes All the chapters contain up to date information and are profusely illustrated Graduate and postgraduate students teachers and scientists of botany and other areas of plant sciences will find this book extremely useful

Embryology of Flowering Plants: Terminology and Concepts, Vol. 3 T B Batygina, 2019-04-23 Plant embryology dealing with the regularities of initiation and the first stages of development of an organism is now flourishing because of the overall progress being made in natural sciences Such discoveries of the 20th century as production of plants from a single somatic cell experimental haploidy and parasexual hybridization were of general biological significance The combined efforts of embryologists geneticists and molecular biologists yielded the discovery of specific genes that control meiosis egg cell development and early stages of embryogenesis The tendency to synthesize data of embryology and genetics has become

increasingly noticeable It is connected with the fact that the majority of problems connected with morphogenesis such as differentiation specialization the evaluation of features and the definition of the notions gene and feature and genotype and phenotype concern embryology and genetics embryogenetics in one way or another Evolutionary embryology has given rise to a new approach to the study of problems of adaptation in plants In connection with the problem of preserving biological diversity under conditions of ecological stress special attention is paid to ecological embryology revealing the critical periods in early ontogenesis and plasticity and tolerance of reproductive systems at the level of species and population The study of variability of morphogenesis and phenotype in population life cycle variations and the diversity of reproductive systems is the most important point in the population embryology of plants
