constructs accurately Additionally the research investigates whether practice leads to a decrease in the involvement of executive functions during listening tasks and explores the potential of visuospatial working memory as a predictor of listening automaticity Utilizing Rasch models the research offers validation for the cognitive and linguistic measures employed linking longitudinal data through common items to provide deeper insights into the automatization process The implications of this research extend to both theoretical understanding and practical applications in pedagogy making it relevant for educators researchers and students in cognitive psychology psycholinguistics and assessment Overall the book aims to contribute to the advancement of automaticity research particularly in the realm of second language acquisition
