Double Task:

Nitrogen Narcosis Measured by Dual-task Performance Leslie A. Whitaker, Martha S. Findley, 1977 Multitasking: Executive Functioning in Dual-Task and Task Switching Situations Tilo Strobach, Mike Wendt, Markus Janczyk, 2018-03-27

Multitasking refers to performance of multiple tasks. The most prominent types of multitasking are situations including either temporal overlap of the execution of multiple tasks (i.e. dual tasking) or executing multiple tasks in varying sequences (i.e. task switching). In the literature, numerous attempts have aimed at theorizing about the specific characteristics of executive functions that control interference between simultaneously and/or sequentially active components of task sets in these situations. However, these approaches have been rather vague regarding explanatory concepts (e.g. task set inhibition, preparation, shielding, capacity limitation), widely lacking theories on detailed mechanisms and/or empirical evidence for specific subcomponents. The present research topic aims at providing a selection of contributions on the details of executive functioning in dual task and task switching situations. The contributions specify these executive functions by focusing on 1) fractionating assumed mechanisms into constituent subcomponents, 2) their variations by age or in clinical subpopulations, and/or 3) their plasticity as a response to practice and training.

Evolutionary Multi-Task Optimization Liang Feng, Abhishek Gupta, Kay Chen Tan, Yew Soon Ong, 2023-03-29

A remarkable facet of the human brain is its ability to manage multiple tasks with apparent simultaneity. Knowledge learned from one task can then be used to enhance problem solving in other related tasks. In machine learning, the idea of leveraging relevant information across related tasks as inductive biases to enhance learning performance has attracted significant interest. In contrast, attempts to emulate the human brain's ability to generalize in optimization, particularly in population-based evolutionary algorithms, have received little attention to date. Recently, a novel evolutionary search paradigm, Evolutionary Multi-Task (EMT) optimization, has been proposed in the realm of evolutionary computation. In contrast to traditional evolutionary searches which solve a single task in a single run, evolutionary multi-tasking algorithms conduct searches concurrently on multiple search spaces corresponding to different tasks or optimization problems, each possessing a unique function landscape. By exploiting the latent synergies among distinct problems, the superior search performance of EMT optimization in terms of solution quality and convergence speed has been demonstrated in a variety of continuous, discrete, and hybrid mixtures of continuous and discrete tasks. This book discusses the foundations and methodologies of developing evolutionary multi-tasking algorithms for complex optimization, including in domains characterized by factors such as multiple objectives of interest, high-dimensional search spaces, and NP-hardness.

Listening Automaticity: A Reduction of Dual-Task Interference and Working Memory Demands Bartolo Bazan, 2024-10-24

SUMMARY This book explores the concept of automaticity in the context of second language listening, focusing on how practice can lead to the ability to perform listening tasks with minimal cognitive effort. The author argues that through practice, lower-level subcomponents of listening can be executed autonomously, requiring less executive control and reducing

dual task interference an indication of automaticity Despite the extensive research on automatization across various skills this book addresses a gap in the literature regarding second language listening from a cognitive psychology perspective It integrates theories from cognitive sciences such as attentional theories of skill acquisition working memory and imagery with linguistic concepts to create a comprehensive framework for investigating listening automaticity Key features of the study include an examination of what types of practice are most effective in fostering listening automaticity The book discusses innovative approaches to assessing listening automaticity including the use of combined tests to evaluate constructs accurately Additionally the research investigates whether practice leads to a decrease in the involvement of executive functions during listening tasks and explores the potential of visuospatial working memory as a predictor of listening automaticity Utilizing Rasch models the research offers validation for the cognitive and linguistic measures employed linking longitudinal data through common items to provide deeper insights into the automatization process The implications of this research extend to both theoretical understanding and practical applications in pedagogy making it relevant for educators researchers and students in cognitive psychology psycholinguistics and assessment Overall the book aims to contribute to the advancement of automaticity research particularly in the realm of second language acquisition

The Elephant in the Room Lotte Svalgaard, 2023-03-17 A group is working on a business challenge The group members are under pressure They have a lot to accomplish and a limited amount of time After first attempting to develop an overview of their common task they try to make a plan to ensure an efficient group process The planning is proving difficult We've all been there We are in a working group or at a meeting discussing a topic or a challenge and all the while as a separate track running underneath our conversation there is a subtext that no one explicitly addresses This is an example of the elephant in the room Most of us notice the elephant it gets in the way and it's difficult to deal with until someone points at it and says There it is let's take a look at it and reduce its impact With an engaging use of examples and questions the book addresses how we can best deal with the elephant and thus promote job satisfaction creativity and productivity In the context of action what we notice often recedes into the background and gradually slips out of focus until we eventually reconnect with our need to reflect and recreate a space for it This book addresses the challenge of focusing on holding on to and acting on what we notice in the middle of it all Maintaining a simultaneous focus on task and process what we do and what we notice is what I define as double awareness Double awareness is not only a core capacity but also a core challenge The aim of the book is to promote understanding and awareness of this core challenge and to inspire both reflection and action in anyone wishing to improve their capacity for double awareness How can we define and understand the practice of mindful avoidance And can we as members of groups and organizations begin to practice mindful action by engaging in and acting on what we notice in real time

This volume is part of this renewed interest and includes reviews of previous findings and recent empirical evidence for associations between the motor domain and other domains from leading researchers in the field of child development We hope that these articles will stimulate further research on this interesting question
