Computer-Aided Molecular Design Jean-Pierre Doucet, Jacques Weber, 1996-03-05 The computer aided design of novel molecular systems has undoubtedly reached the stage of a mature discipline offering a broad range of tools available to virtually any chemist However there are few books covering most of these techniques in a single volume and using a language which may generally be understood by students or chemists with a limited knowledge of theoretical chemistry The purpose of this book is precisely to review in such a language both methodological aspects and important applications of computer aided molecular design CAMD with a special emphasis on drug design and protein modeling Using numerous examples ranging from molecular models to shapes surfaces and volumes Computer Aided Molecular Design provides coverage of the role molecular graphics play in CAMD The text also treats the very notion of the structure of molecular systems by presenting both the various experimental techniques giving access to it and the most common model builders based on force fields Separate chapters are devoted to other important topics in CAMD such as Monte Carlo and molecular dynamics simulations most common quantum chemical methods derivation and visualization of molecular properties and molecular similarity Finally strategies used in protein modeling and drug design such as receptor mapping and the pharmacophore approach are presented and illustrated by several examples The book is addressed to students and researchers who wish to enter this new exciting field of molecular sciences but also practitioners in CAMD as a comprehensive source of refreshing information in their field

Key Features Presents a comprehensive introduction to computer aided molecular design Describes applications of CAMD through the use of numerous examples Emphasizes strategies used in protein modeling and drug design Includes separate chapters devoted to other important topics in CAMD such as Monte Carlo and molecular dynamics simulations Common quantum chemical methods Derivation and visualization of molecular properties Molecular similarity

WIN conference series began in 2008 with the aim of strengthening the research careers of female number theorists. The series introduced a novel research mentorship model where women at all career stages from graduate students to senior members of the community joined forces to work in focused research groups on cutting edge projects designed and led by experienced researchers. The goals for Women In Numbers 3 were to establish ambitious new collaborations between women in number theory to train junior participants about topics of current importance and to continue to build a vibrant community of women in number theory. Forty two women attended the WIN3 workshop including 15 senior and mid level faculty, 15 junior faculty and postdocs, and 12 graduate students.

A Topological Picturebook George K. Francis, 2013-03-19. Praise for George Francis's *A Topological Picturebook*. Bravo to Springer for reissuing this unique and beautiful book. It not only reminds the older generation of the pleasures of doing mathematics by hand but also shows the new generation what hands on really means.

John Stillwell, University of San Francisco. The *Topological Picturebook* has taught a whole generation of mathematicians to draw to see and to think. Tony Robbin, artist and author of *Shadows of Reality: The Fourth Dimension in Relativity, Cubism and Modern Thought*. The classic reference for how to present topological information visually, full of amazing hand drawn pictures of complicated surfaces.

John Sullivan, Technische Universität Berlin. *A Topological Picturebook* lets students see topology as the original discoverers conceived it: concrete and visual, free of the formalism that burdens conventional textbooks.

Jeffrey Weeks, author of *The Shape of Space*. *A Topological Picturebook* is a visual feast for anyone concerned with mathematical images. Francis provides exquisite examples to build one's visualization muscles. At the same time he explains the underlying principles and design techniques for readers to create their own lucid drawings.

George W. Hart, Stony Brook University. In this collection of narrative gems and intriguing hand drawn pictures, George Francis demonstrates the chicken and egg relationship in mathematics of image and text. Since the book was first published, the case for pictures in mathematics has been won, and now it is time to reflect on their meaning. *A Topological Picturebook* remains indispensable.
