Fred W. Price

Double Planet Pluto And Charon:

Pluto and Charon Alan Stern, David James Tholen, 1997-12 For five decades after its discovery in 1930 the planet Pluto remained an enigma. However, several events during the last two decades have helped to lift the veil of mystery surrounding the ninth planet. The discovery of its satellite Charon in 1978 permitted occultation observations that allowed scientists to determine the size of both bodies. Astronomers also detected the presence of an atmosphere, and the Hubble Space Telescope provided views in unprecedented detail. In addition to these two fortuitous events, advances in telescopic instrumentation and computational methods led to exciting observational and theoretical discoveries. This new Space Sciences Series volume focuses on the scientific issues associated with Pluto and Charon. Fifty collaborating authors here review the latest research on the Pluto-Charon binary from bulk properties, surfaces and interiors to atmospheric structure, composition and dynamics. They also provide historical perspectives on Pluto-Charon research and discuss the population of the trans-Neptunian region and the origin of the Pluto-Charon binary. Also included are prefatory remarks by Pluto's and Charon's discoverers, Clyde Tombaugh and James Christy. This volume offers the most comprehensive available compendium of research work for understanding these far-off members of our solar system just at a time following dramatic developments in our knowledge but before that knowledge can be advanced by spacecraft missions.

The Double Planet Isaac Asimov, 1960 Discusses the smallest, most distant and most mysterious planet in our solar system: its discovery, its peculiar orbit and its recently discovered satellite.

Pluto and Other Dwarf Planets Ruth Owen, 2013-07-15 The distinction between planets and dwarf planets is explored in this fascinating volume. It discusses the most recent scientific discoveries along with the mysteries and questions they raise. Amazing illustrations make this book beautiful as well as informative.

THE GREAT SPACE ADVENTURE Ruben Ygua, 2025-08-20 Galileo Galilei was an astronomer, mathematician, physicist and philosopher who led the scientific revolution that took place during the Renaissance. His discoveries have made him the father of science as well as the father of modern astronomy and physics. In 1609 he received a letter from a former student informing him that in Holland they had made a telescope that allows him to see distant objects. With only this information, Galileo will build his own telescope far superior to the Dutch one: it does not deform objects, it has more magnification, and thanks to a divergent lens it gives the image to the right. That same year he presented the instrument to the Senate of Venice in San Marco Square, from where he managed to show the island of Murano located 2.5 km from the place. This means obtaining a lifetime post at the University of Padua and overcoming his financial difficulties. The following year he dedicated it to perfecting his instrument and observing the stars with it. With this he discovers that the Moon also has mountains, thus finally dismantling the Aristotelian theory that considered it to be a perfect sphere. In a short time you will also discover the nature of the Milky Way, the constellation of Orion, the star clusters and study the rings of Saturn, the phases of Venus and sun spots. In 1610 he made another important discovery: the four satellites of Jupiter that revolve around him. Today they are known as Galilean satellites.

in his honor He thought of Jupiter and its satellites as a model of the solar system By doing this he wanted to show that Aristotle was wrong again and that not all the stars revolved around the Earth This was a severe blow to geo centrism Galileo will publish all his discoveries in this field in The Messenger of the Stars Sidereus Nuncius The publication of this book will cause Aristotle supporters to declare war on him since they do not want to see their science questioned Furthermore his method based on observation and experimentation was the opposite of theirs Galileo will refuse even to be compared to them That was the beginning of modern astronomy Historically space exploration began with the launch of the artificial satellite Sputnik by the USSR on October 4 1957 at the Baikonur Cosmodrome USSR rocket launch base in Tyuratam Kazakhstan This event provoked a space race for the conquest of space between the USSR and the United States that culminated in the arrival of man on the Moon This is the story of that great adventure Pluto Barrie W. Jones,2010-08-12 Orbiting at the edge of the outer Solar System Pluto is an intriguing object in astronomy Since the fascinating events surrounding its discovery it has helped increase our understanding of the origin and evolution of the Solar System and raised questions about the nature and benefits of scientific classification This is a timely and exciting account of Pluto and its satellites The author uses Pluto as a case study to discuss discovery in astronomy how remote astronomical bodies are investigated and the role of classification in science by discussing Pluto s recent classification as a dwarf planet Besides Pluto the book also explores the rich assortment of bodies that constitute the Edgeworth Kuiper Belt of which Pluto is the largest innermost member Richly illustrated this text is written for general readers amateur astronomers and students alike Boxed text provides more advanced information especially for readers who wish to delve deeper into the subject *Self-Evident Astrology* Jeffrey Sayer Close,2009-08 In SELF EVIDENT ASTROLOGY TM the planets mean what they are and are what they mean It is this simple All we need to understand astrology is to look into the nature of the solar system and sky around us This book shows that the physical arrangement of the solar system the orbital positions the inclinations of orbital planes and things such as the mere size of a planet lead to a natural meaning for each planet Jeffrey Sayer Close has been an amateur astrologer for 40 years and the Director of the Astrological Bureau of Ideas www.aboi.com for the past 12 years He has a B A in physics and a M A in telecommunications He has designed telecommunications network for over 25 corporations and built his own successful telecom software company He has often been quoted and written about in trade press He has also made guest appearances on Andrea Klim s Turn To The Stars TV show in Manchester NH Mr Close has taken his background in science his experience in complex networks and long experience in astrology and found new more basic fundamentals of astrology These fundamentals have incorporated in his innovative astrological software INTREPID **Wanderers in Space** Kenneth R.
