**Hiroshima in History** Robert James Maddox,2007 When President Harry Truman authorized the use of atomic weapons against Japan he did so to end a bloody war that would have been bloodier still had the planned invasion of Japan proved necessary Revisionists claim that Truman s real interest was a power play with the Soviet Union and that the Japanese would have surrendered even earlier had the retention of their imperial system been assured Truman wanted the war to continue they insist in order to show off America s powerful new weapon This anthology exposes revisionist fallacies about Truman s motives the cost of an invasion and the question of Japan s surrender Essays by prominent military and diplomatic historians reveal the hollowness of revisionist claims exposing the degree to which these agenda driven scholars have manipulated the historical record to support their contentions They show that although some Japanese businessmen and minor officials indicated a willingness to negotiate peace no one in a governmental decision making capacity even suggested surrender And although casualty estimates for an invasion vary considerably the more authoritative approximations point to the very bloodbath that Truman sought to avoid Volume editor Robert Maddox first examines the writings of revisionist Gar Alperovitz to expose the unscholarly methods Alperovitz employed to support his claims then distinguished Japanese historian Sadao Asada reveals how difficult it was for his country s peace faction to prevail even after the bombs had been dropped Other contributors point to continuing Japanese military buildups analyze the revisionists low casualty estimates for an invasion reveal manipulations of the Strategic Bombing Survey of 1946 and show how even the exhibit commemorating the fiftieth anniversary of the bombing at the Smithsonian National Air and Space Museum hewed to the revisionist line And a close reading of Tsuyoshi Hasegawa s acclaimed Racing the Enemy exposes many grave discrepancies between that recent revisionist text and its sources The use of atomic bombs against Japan remains one of the most controversial issues in American history Gathered in a single volume for the first time these insightful readings take a major step toward settling that controversy by showing how insubstantial Hiroshima revisionism really is and that sometimes history cannot proceed without decisive action however regrettable

**Physics of Lakes** Kolumban Hutter,Irina P. Chubarenko,Yongqi Wang,2014-03-26 The ongoing thread in this volume of Physics of Lakes is the presentation of different methods of

investigation for processes taking place in real lakes with a view to understanding lakes as components of the geophysical environment. It is divided into three parts. Part I is devoted to numerical modeling techniques and demonstrates that i) wind induced currents in depth integrated models can only adequately predict current fields for extremely shallow lakes and ii) that classical multi layered simulation models can only adequately reproduce current and temperature distributions when the lake is directly subjected to wind but not the post wind oscillating response. This makes shock capturing discretization techniques and Mellor Yamada turbulence closure schemes necessary as well as extremely high grid resolution to reduce the excessive numerical diffusion. Part II is devoted to the presentation of principles of observation and laboratory experimental procedures. It details the principles of operation for current temperature conductivity and other sensors applied in the field. It also discusses the advantages and limitations of common measuring methods like registration from stationary or drifting buoys sounding and profiling from a boat etc. Questions of data accuracy quality and reliability are also addressed. The use of laboratory experiments on a rotating platform is based on an exposition of dimensional analysis and model theory and illustrated using Lake Constance as an example. Part III gives an account of the dynamics of lake water as a particle laden fluid which coupled with the transport of the bottom sediments leads to morphodynamic changes of the bathymetry in estuarine and possibly whole lake regions. An elegant spatially one dimensional theory makes it possible to derive analytic solutions of deltaic formations which are corroborated by laboratory experiments. A full three dimensional description of the evolution of the alluvial bathymetry under prescribed tributary sediment input indicates a potential subject for future research.

*Atomic Salvation* Tom Lewis, 2020-07-20. A thought provoking analysis of the bombing of Hiroshima and Nagasaki and what might have happened if conventional weapons were used instead. It has always been a difficult concept to stomach that the atomic bombs dropped on Hiroshima and Nagasaki in 1945 causing such horrific suffering and destruction also brought about peace. Attitudes toward the event have changed through the years from grateful relief that World War II was ended to widespread condemnation of the United States. *Atomic Salvation* investigates the full situation examining documents from both Japanese and Allied sources but also using in depth analysis to extend beyond the mere recounting of statistics. It charts the full extent of the possible casualties on both sides had a conventional assault akin to D Day gone ahead against Japan. The work is not concerned solely with the military necessity to use the bombs; it also investigates why that necessity has been increasingly challenged over the successive decades. Controversially the book demonstrates that Japan would have suffered far greater casualties likely around 28 million if the nation had been attacked in the manner by which Germany was defeated by amphibious assault, artillery and air attacks preceding infantry insertion and finally by subduing the last of the defenders of the enemy capital. It also investigates the enormous political pressure placed on America as a result of their military situation. The Truman administration had little choice but to use the new weapon given the more than a million deaths that Allied forces would undoubtedly have suffered through conventional assault. By charting reaction to the

bombings over time Atomic Salvation shows that there has been relentless pressure on the world to condemn what at the time was seen as the best and only military solution to end the conflict Never has such an exhaustive analysis been made of the necessity behind bringing World War II to a halt **The Ladies' Repository** ,1849 *The entire works of John Bunyan, ed. by H.
