Airplanes of the Future Don Berliner, 1987 Describes some of the many planes being designed today as designers and engineers experiment with new ideas materials fuels and control systems to develop planes that will fly faster further higher and more efficiently

Future of Airplane Factory George Nicholas Bullen, 2019-05-28 The Future of Airplane Factory Digitally Optimized Intelligent Airplane Factory defines the architecture key building blocks and roadmap for actualizing a future airplane factory FAF that is digitally optimized for intelligent airplane assembly They fit and integrate with other FAF building blocks that aggregate to a Digitally Optimized Intelligent Airplane Factory DOIAF The word intelligent refers to the ability of a system to make right decisions and take right action in the highly dynamic and fluid environment of the modern airplane manufacturing space The event driven dynamics inherent in the complexity of this environment drive the need for expert knowledge which resides in intelligence systems incorporating the experience of experts Expert knowledge need not be smart brilliant or possess genius as long as the outcomes are derived from right decisions resulting in right actions applied rapidly to sustain an optimized factory enterprise Complete factory enterprise visibility requires a higher order of decision capability that current operating systems do not have A highly visible factory collects and displays data and information as it happens at a rate beyond the ability of humans and current systems to analyze process decide and act upon Expert systems are constructed to present humans with right decisions in the form of optimal choices for right actions by incorporating the knowledge of experts into the logic for the decision Structured Knowledge Based Expert Systems SKBES are incorporated in this book and defined as a critical component for full enterprise actionable visibility The power of the Digitally Optimized Intelligent Airplane Factory not only is found in its ability to unify the factory reduce touch labor improve quality and streamline throughput but it also enables a significant reduction in above the shop floor support and management Such an ecosystem frees the human to focus on the complexity of interpersonal responsibilities If the use of a DOIAF can be viewed as a holistic mechanism then the human can be the agent engaging with that mechanism improving negotiations for pricing contracts or other person to person events that require instinct and relationship

particular the Specific Operations Risk Assessment SORA and its impact on the presented technological solutions and operational concepts are studied Starting with the assumption of an operation over sparsely populated areas and below common air traffic diverse measures to further reduce operational risks are proposed Operational concepts derived from logistics use cases set the context for an in depth analysis including aircraft and system design safe autonomy as well as airspace integration and datalinks Results from simulations and technology demonstrations are presented as a proof of concept for solutions proposed in this book *Future V/STOL Airplanes* J. R. Nelson, J. R. Gebman, J. L. Birkler, 1980 As aeronautical technologies continue to advance V STOL airplanes will become increasingly more attractive for a variety of military missions The decision whether to approve the acquisition of a V STOL airplane for a particular mission will depend upon factors that include the airplane s expected performance capability the likely acquisition cost and the likely amount of time required for research and development To develop guidelines and techniques for critically evaluating these factors RAND has analyzed past V STOL research and development programs examined the current state of pertinent aeronautical technologies and developed appropriate analytical tools where suitable information exists The introduction of future V STOL airplanes for military missions will continue to depend on mission needs that place a high operational value on the special capabilities of V STOL airplanes an operational value high enough to warrant the exceptionally long development times and the premium prices compared with conventional airplanes that must be paid for research development and procurement
