Ak L 8 Animal Skeletons:

Tumors in Domestic Animals Donald J. Meuten, 2008-06-02 Since the third edition of Tumors of Domestic Animals there has been an enormous expansion of our knowledge about the molecular mechanisms of tumor development and the ancillary aids used to diagnose neoplasms. The fourth edition condenses this new body of information and presents it in a way that is useful to diagnostic pathologists, residents, veterinarians, and oncologists. The format of the previous editions has been maintained but the text and the illustrations are substantially changed or entirely different. Readers will be able to find salient clinical information, prevalence data, biological behavior, and most importantly, accurate information about gross and microscopic lesions to help diagnostic pathologists establish an accurate morphological diagnosis. The editor and authors of Tumors of Domestic Animals, all recognized experts in their fields, recognize the need for accurate morphological diagnoses in veterinary patient care, particularly with the numerous treatment modalities now available to oncologists and owners. This landmark reference in veterinary pathology provides the applicable information that clinical veterinarians need and want to make decisions about treatment of the animals in their care.

Archaeological Investigations at the Atigun Site, Central Brooks Range, Alaska Ian R. Wilson, 1978-01-01 Analysis of the Atigun site based on work conducted in 1973 and 1974 on the North Slope of the Central Brooks Range, Alaska. The Atigun site is marginal to both Native and Inuit territory; thus the primary concern of this analysis is the cultural affiliation of its occupants. Conclusions point to late summer occupation of the site by Athapascans between A.D. 1400 and A.D. 1800. This period is defined as the Kavik phase. Published in English.

Recent Advances in Ageing and Sexing Animal Bones Deborah Ruscillo, 2015-06-30 This volume in the ICAZ series deals with the technical advances made over the last twenty years in the field of ageing and sexing animal bones. The analysis of ancient DNA holds great possibilities for sexing certain faunal assemblages, though by no means all, which is an urgent issue in the study of hunting and animal husbandry. It can be assumed that our forebears used more subtle taxonomic criteria than we do today and it is important therefore that we are able to recognise traits that will allow for more accurate classification in terms of calendar age or sex. The eighteen papers in this book examine the state of research for various techniques of age, sex determination and assess potential future development.
