Alarm Cry:

A Promise of Hope-- a Call to Obedience Graham S. Ogden, Richard Deutsch, 1987 The book of Joel is one of the Old Testament prophetic books but it also has a clear and close association with lament literature Graham Ogden takes seriously the book's lament setting exegesis entirely from within that framework In his commentary on the book of Malachi Richard Deutsch examines the religious moral and social aspects of the early postexilic Jewish community that the prophet was addressing in this brief book

The Coevolution of Language, Teaching, and Civil Discourse Among Humans Donald M. Morrison, 2020-07-25 This book traces the evolutionary trajectory of language and teaching from the earliest periods of human evolution to the present day The author argues that teaching is unique to humans and our ancestors and that the evolution of teaching language and culture are the inextricably linked results of gene culture coevolutionary processes Drawing on related fields including archaeology palaeontology cultural anthropology evolutionary psychology and linguistics he makes the case that the need for joint attention and shared goals in complex adaptive strategies is the underlying driver for the evolution of language like communication This book will be of interest to students and scholars of these disciplines as well as lay readers with an interest in human origins

Mongoosees A. M. S. Dunn, H. E. Hinton, **How the Brain Got Language** Michael A. Arbib, 2012-04-11 Unlike any other species humans can learn and use language This book explains how the brain evolved to make language possible through what Michael Arbib calls the Mirror System Hypothesis Because of mirror neurons monkeys chimps and humans can learn by imitation but only complex imitation which humans exhibit is powerful enough to support the breakthrough to language This theory provides a path from the openness of manual gesture which we share with nonhuman primates through the complex imitation of manual skills pantomime protosign communication based on conventionalized manual gestures and finally to protospeech The theory explains why we humans are as capable of learning sign languages as we are of learning to speak This fascinating book shows how cultural evolution took over from biological evolution for the transition from protolanguage to fully fledged languages The author explains how the brain mechanisms that made the original emergence of languages possible perhaps 100 000 years ago are still operative today in the way children acquire language in the way that new sign languages have emerged in recent decades and in the historical processes of language change on a time scale from decades to centuries Though the subject is complex this book is highly readable providing all the necessary background in primatology neuroscience and linguistics to make the book accessible to a general audience

The Physiology of Truth Jean-Pierre Changeux,2009-06-30 In this wide ranging book one of the boldest thinkers in modern neuroscience confronts an ancient philosophical problem can we know the world as it really is Drawing on provocative new findings about the psychophysiology of perception and judgment in both human and nonhuman primates and also on the cultural history of science Jean Pierre Changeux makes a powerful case for the reality of scientific progress and argues that it forms the basis for a coherent and universal theory of human rights On this view belief in objective knowledge is not a mere ideological slogan or a naive confusion it is a characteristic feature of human cognition throughout evolution and the scientific method its most sophisticated embodiment Seeking to reconcile science and humanism Changeux holds that the capacity to recognize truths that are independent of subjective personal experience constitutes the foundation of a human civil society
