

Albert Einstein

Albert Einstein was born at Ulm, in Württemberg, Germany, on March 14, 1879. Six weeks later the family moved to Munich, where he later on began his schooling at the Luitpold Gymnasium. Later, they moved to Italy and Albert continued his education at Aarau, Switzerland and in 1896 he entered the Swiss Federal Polytechnic School in Zurich to be trained as a teacher in physics and mathematics. In 1901, the year he gained his diploma, he acquired Swiss citizenship and, as he was unable to find a teaching post, he accepted a position as technical assistant in the Swiss Patent Office. In 1905 he obtained his doctor's degree.

During his stay at the Patent Office, and in his spare time, he produced much of his remarkable work and in 1908 he was appointed Privatdozent in Berne. In 1909 he became Professor Extraordinary at Zurich, in 1911 Professor of Theoretical Physics at Prague, returning to Zurich in the following year to fill a similar post. In 1914 he was appointed Director of the Kaiser Wilhelm Physical Institute and Professor in the University of Berlin. He became a German citizen in 1914 and remained in Berlin until 1933 when he renounced his citizenship for political reasons and emigrated to America to take the position of Professor of Theoretical Physics at Princeton. He became a United States citizen in 1940 and retired from his post in 1945.

After World War II, Einstein was a leading figure in the World Government Movement, he was offered the Presidency of the State of Israel, which he declined, and he collaborated with Dr. Chaim Weizmann in establishing the Hebrew University of Jerusalem.

Einstein always appeared to have a clear view of the problems of physics and the determination to solve them. He had a strategy of his own and was able to visualize the main stages on the way to his goal. He regarded his major achievements as mere stepping-stones for the next advance.

At the start of his scientific work, Einstein realized the inadequacies of Newtonian mechanics and his special theory of relativity stemmed from an attempt to reconcile the laws of mechanics with the laws of the electromagnetic field. He dealt with classical problems of statistical mechanics and problems in which they were merged with quantum theory: this led to an explanation of the Brownian movement of

Albert Einstein: A Biography Abdul Montaqim, 2012-07-30 ABOUT THE BOOK Albert Einstein is regarded by many people as the greatest scientific mind in the history of the world Why Well there are many reasons but one of the most important is that his theories led directly to the creation of the atom bomb and with it the dawn of the nuclear age Not only did his work

in theoretical physics in particular his famous $E=mc^2$ equation indicate that it would be possible to build a massively destructive bomb the like of which had never been seen before Einstein himself urged the United States government to go ahead and build it Most historians agree that Germany's invasion of Poland on September 1 1939 marked the beginning of World War II in Europe But about one month before that date on August 2 1939 Einstein who was living in America at the time wrote to the then President of the US Franklin Delano Roosevelt outlining the ongoing scientific breakthroughs made by Enrico Fermi and Leo Szilard that could lead to the creation of extremely powerful bombs of a new type and suggesting that the government should fund manage and speed up the progress towards such weapons In the letter Einstein explained that the key element used in these scientific chain reaction experiments was an element called uranium which would become critical to the making of the bombs in the immediate future To that end he recommended that the US government should give particular attention to securing the supply of uranium ore particularly as the US had no significant uranium mines of its own Einstein further pointed out that Germany had stopped exports from the uranium mines it owned in Czechoslovakia implying that if the US did not develop the new bombs Germany will

EXCERPT FROM THE BOOK

By the standards of most scientists Einstein lived a varied and interesting life living in several different countries over the course of his 76 years formulating theories that not only changed the scientific establishment but also transformed the world and getting married twice the second time to Elsa L. Wienthal his first cousin on his mother's side and second cousin on his father's side It was with Elsa that he emigrated to the United States in 1933 the year when the Nazis came to power in Germany under the leadership of Adolf Hitler At that time Jews were becoming increasingly targeted by the Germans The Nazi propaganda chief Joseph Goebbels declared that Jewish intellectualism is dead even as he encouraged students to organise mass public burnings of thousands of books defending their actions as their right to clean up the debris of the past Einstein was reported to be on a hit list and it was probably only a matter of time that the Nazis came for knocking for him or worse if he had stayed in Germany But he did not He emigrated to the US at the age of 54 and stayed there for much of the rest of his life becoming an American citizen in 1940 Elsa had died several years earlier in 1936 of heart and kidney problems And Einstein did not marry again He and Elsa did not have children together but Einstein had two sons Hans and Eduard and a daughter Lieserl from his previous marriage to Mileva Maric It's unclear what exactly his marital problems were when he was Mileva but he separated from her in 1914 leaving her and their two sons in Zurich while he lived in Berlin It's also unclear what happened to their daughter as no mention is made of her anywhere During this difficult time in his life Einstein had asked Mileva for a divorce but she was reluctant or unwilling It has been reported that he promised that he would give her all the money from the Nobel Prize if she agreed to a divorce He had not won the Nobel Prize at that time but won it later in 1921 Buy the book to continue reading
