integrates information and communication technologies with medical and nano bio sensor devices to enhance patient care. The book highlights advances in telemedicine including highly functional electronic medical devices like implantable and wearable devices engineered through nanotechnology. It details real time case studies on smart drug delivery, edge computing and personalized healthcare applications to provide valuable insights into optimizing network performance and utilization in personalized healthcare. The comprehensive exploration of machine learning algorithms and communication protocols further equips readers with the knowledge to design and implement end to end IoBNT solutions. Presents models based on edge computing, communication protocols, machine learning, smart drug delivery, disease detection mechanism and bio nano sensor based applications among others. Includes wearable sensors, nano sensors and IoT applications that are enabling Internet of Bio Nano Things system initiatives worldwide. Elaborates the different bio computing techniques of intelligent systems from a practical point of view solving common life problems.
