Roufousse, Mats W. Johansson, 2018-12-06 With the recent approval of the first eosinophil depleting therapeutic agents targeting the IL 5 pathway for treatment of severe eosinophilic asthma eosinophils and eosinophilic disorders are in the limelight Indeed setbacks during clinical development of these compounds have revealed how much remains to be known about eosinophil biology in vivo and have nurtured profuse research both on basic eosinophil biology and on pathogenic disease mechanisms in order to better delineate the most meaningful targets for innovative therapeutic strategies On one hand variable degrees of eosinophil depletion observed in some compartments during IL 5 targeted treatment indicate that certain eosinophil subsets may not rely on this cytokine and or that other important pro eosinophilic mediators and signaling pathways are operative in vivo On the other hand it is increasingly clear that disorders involving eosinophils such as asthma are the final outcome of complex interactions between diverse cell types and mediators beyond eosinophils and IL 5 These include type 2 helper T Th2 cells and innate lymphoid cells mast cells and a variety of factors that either activate eosinophils or are released by them Although a considerable amount of research has focused on asthma because it is a common condition and because management of severe asthma remains a major challenge several rare eosinophilic disorders with more homogenous features have proven to be extremely useful models to reach a better understanding of the involvement of eosinophils in tissue damage and dysfunction and of the micro environmental interactions operating within the complex network of eosinophilic inflammation Unraveling this interplay has resulted in advances in the development of molecular

tools to detect disease subsets and to monitor therapeutic responses and in identification of promising new therapeutic targets This Research Topic dedicated to eosinophilic conditions covers aspects of the biology of eosinophils and closely related cells of particular relevance for drug development reports on translational research investigating pathogenic mechanisms of specific eosinophilic disorders in humans that will likely result in significant changes in the way patients are managed and presents an overview of the current advancement of targeted drug development for these conditions with a special focus on asthma

Textbook of Pulmonary and Critical Care Medicine Vols 1 and 2 SK Jindal, PS Shankar, Suhail Raoof, Dheeraj Gupta, 2011-01-31 This book published in two volumes Both volume divided in twenty three sections all sections and chapters are most important The Textbook of Pulmonary and Critical Care Medicine also offers a unique exposure to the problems in many parts of the world Tuberculosis the number one treatable condition has been extensively covered and special topics such as multi drug resistance directly observed therapy TB prevention nonpharmacologic approaches and extrapulmonary tuberculosis are particularly relevant Many countries are facing a growing burden of noncommunicable respiratory diseases They have become the second leading cause of death after injuries and their impact on indirect costs such as loss of work and home productivity is enormous These problems are addressed and measures of prevention such as smoking cessation are included Other special challenges including topics such as indoor and outdoor air pollution climate change poisoning with pesticides snakebite toxicity pulmonary manifestations of tropical infections and industrial accidents such as the tragedy seen in Bhopal Madhya Pradesh with methyl isocyanate have been well covered However as globalization flattens the playing field and countries leap to industrialization cultural beliefs natural resources climate and geography have slowed the pace of development in many parts of the world Poverty leads to malnutrition homelessness lack of education and poor access to health care Overcrowded cities and rural underdevelopment are other challenges that impact health in the various parts of the world Moreover epidemics of HIV drug abuse and smoking addiction take a greater toll on the population Yes the world is flat but the terrain is filled with mountains and valleys and local problems demand local solutions And these local problems need to be explored and presented with a scholarly perspective The Textbook of Pulmonary and Critical Care Medicine has successfully incorporated these sociodemographic factors into the subject matter The text is well written and the chapters are carefully referenced with subjects found in all traditional pulmonary and critical care textbooks e g airway diseases interstitial lung disease pleural disease pulmonary neoplasia pulmonary infection sleep and critical care There are several nontraditional sections as well that are practical and especially helpful to the practicing physician These include a section on the symptom approach to lung disease an overview of the pharmacologic agents used to treat lung disease and a comprehensive review of methods in lung diagnosis from the simple history and physical examination to the latest complex tools of interventional pulmonology The textbook is especially unique because of the abundance of illustrations flow charts and tables There are many radiographic and pathologic reproductions

that are especially helpful Textbook of Pulmonary and Critical Care Medicine Vols 1 and 2 SK Jindal, PS Shankar, Suhail Raoof, Dheeraj Gupta, 2011-03-20 Book includes the basic principles of Pulmonology as well as the recent advances in allied clinical sciences relevant to pulmonology Includes valuable inputs on tuberculosis other pulmonary infections environmental and occupational medicine sleep disorders and general systemic diseases affecting the respiratory system Although critical care is relevant for most of the medical and surgical specialties the pulmonologist have a more vested interest than other specialists Assisted respiration which forms the core of most critical care lies in the primary domain of pulmonologists

Holgate, Lanny J. Rosenwasser, 2009-11-10 When I entered the field of allergy in the early 1970s the standard textbook was a few hundred pages and the specialty was so compact that texts were often authored entirely by a single individual and were never larger than one volume Compare this with Allergy Frontiers Epigenetics Allergens and Risk Factors the present s volume text with well over 150 contributors from throughout the world This book captures the explosive growth of our specialty since the single author textbooks referred to above The unprecedented format of this work lies in its meticulous attention to detail yet comprehensive scope For example great detail is seen in manuscripts dealing with topics such as Exosomes naturally occurring minimal antigen presenting units and Neuropeptide S receptor 1 NPSR1 an asthma susceptibility gene The scope is exemplified by the unique approach to disease entities normally dealt with in a single chapter in most texts For example anaphylaxis a topic usually confined to one chapter in most textbooks is given five chapters in Allergy Frontiers This approach allows the text to employ multiple contributors for a single topic giving the reader the advantage of being introduced to more than one vi point regarding a single disease *The Immunological Basis of Asthma* Bart Lambrecht, Henk Hoogsteden, Zuzana Diamant, 2003-02-26 This text assesses the role of dendritic cells T and

B lymphocytes epithelial and mast cells eosinophils neutrophils macrophages and their products in the initiation and progression of airway inflammation regulation and repair It unveils advances in immunology and cell biology to generate new therapeutic regimens for inflammatory and aller **Mast Cells in Allergic Diseases** Hirohisa Saito,Yoshimichi Okayama,2005-01-01 In this book the editors have focused on the roles of mast cells in allergic diseases and discuss the future direction of discovering drugs Another implication of this book is to understand mast cells at the system level System biology is a research category to understand biology at the system level by examining the structure and dynamics of cellular and organismal functions rather than the characteristics of isolated parts of a cell or organism Pathophysiology and epidemiology of virus-induced asthma Hirokazu Kimura,Akihide Ryo,2015-01-26 Virus caused asthma we now call a phenotype of asthma Regardless of the significance and popularity of this disease the etiology of the virus induced asthma have not well understood In addition a few effective vaccines have been applied to prevent respiratory virus infection To solve the issues it is essential to clarify and delineate both aspects of the virus and host defense systems including acute chronic inflammation and airway tissue remodeling To deeply review and discuss pathophysiology and epidemiology of virus induced asthma this topics includes new findings of the host immunity pathology epidemiology and virology of asthma chronic obstructive pulmonary disease COPD We believe that these works are well summarized and informative to glimpse the field of virus associated asthma and COPD and may help understanding the basic and clinical aspects of the diseases
