**Oilseed Meal as a Sustainable Contributor to Plant-Based Protein** Manoj Kumar, Sneha Punia Bangar, Parmjit S. Panesar, 2024-02-27 Protein is one of the most important ingredients of the human diet and is considered crucial for the growth development of all age groups Studies have set the recommended dietary allowance of protein as 0.8 g/kg body weight per day for healthy adults The world population is projected to reach 10 billion by 2050 and it will be a significant challenge for the scientific community to overcome the growing demand for protein The results of global warming from shifting climatic conditions to unpredictable rainfalls have further complicated the situation The search for alternative protein sources that can be both sustainable and renewable is one of the major challenges in the face of potential mass protein malnutrition Oilseed crops such as soybean mustard oil palm peanuts cottonseed flax seed coconut canola and sesame are mainly cultivated for the extraction of cooking oil and are underutilized as sources of protein Oilseed meals contain as much as 50% protein but remain under valued since they are traditionally utilized as fertilizer or as feed for livestock animals Numerous recent studies show that oilseed meal sources can be utilized as a sustainable and renewable source of protein and could play a major role in alleviating the global problem of protein malnutrition Oilseed Meal as Sustainable Contributor to Plant Based Protein explores oilseed crops that can contribute towards the regular supply of protein in an increasing population and changing climate Each chapter focuses on a specific oilseed crop including comprehensive coverage of the processing and extraction specifics for each crop plus their amino acid profiles and other functional properties The application of oilseed proteins for production of bioactive peptides and preparation of value added products is also covered This text is useful for food scientists and researchers seeking an updated single source for coverage on all the most important oilseed crops and their potential roles in combating protein shortages in a growing world population

***Bioactive Peptides from Food*** Leo M.L. Nollet, Semih Ötles, 2022-03-28 A growing body of scientific evidence has revealed that many food peptides exhibit specific biological activities in addition to their established nutritional value Bioactive peptides present in foods may help reduce the worldwide epidemic of chronic diseases that account for a great number of premature deaths annually Bioactive peptides can be defined as isolated small fragments of proteins which provide some physiological health benefits They act as potential modifiers reducing the risk of many chronic diseases Bioactive Peptides from Food Sources Analysis and Functions considers fundamental concepts sources hydrolysis fractionation purification analysis chemical synthesis functions and regulatory status of nutraceutical bioactive peptides Methods of isolation of these peptides from different protein sources with their in vitro and vivo physiological effects are addressed Divided into seven sections this book delves into how these peptides play a major role in the development of various functional foods Numerous bioactive peptides have been reported in recent years as naturally present or generated from food proteins of different origins like milk eggs soya fish and meat Key Features Includes a detailed study of the different sources of bioactive peptides Discusses the health benefits such as antimicrobial antiallergic antihypertensive antitumor and immunomodulatory properties of peptides Explores the state of the art analysis methods of peptides Discovers the bioinformatics of possible bioactive peptides Written by experts in their field from around the world Bioactive Peptides from Food reveals the world of databases of peptides It is a great resource for food scientists technologists chemists nutrition researchers producers and processors working in the whole food science and technology field as well as those who are interested in the development of innovative functional products

Rather, F. A. Masoodi, 2024-10-22 Functional food technology aims to boost consumer well-being by providing health benefits beyond that of fundamental nutrition. Meat and meat products have numerous disease preventing and health promoting benefits. However, the meat industry has faced many new challenges since the World Health Organization (WHO) studies suggesting that small increases in the risk of several cancers may be associated with high consumption of processed meat. In addition, consumers often associate meat with a negative health image. This negative image of meat is mainly due to fat content such as saturated fatty acids and cholesterol and process-induced toxicants like N-nitroso compounds and polycyclic aromatic hydrocarbons (PAHs) and the alliance of these with chronic diseases. In this context, the functional food concept applied to meat processing has gained importance especially by reduction, replacement of fat, sodium, nitrites, reduction of process-induced toxicants and addition of beneficial components such as probiotics and bioactive compounds. *Hand Book of Processed Functional Meat Products* provides meat industry professionals with a step-by-step guide to post-mortem muscle chemistry, functional and cultured meat products design and development, bioactive compounds, reduction of carcinogenic compounds, application of enzymes and nanotechnology, innovation in sensory assessment, authentication and marketing, 3D printing in the development of meat-based products and regulatory and consumer challenges in functional meat products. This book differs from other publications on functional meat product processing in that it offers comprehensive coverage and in-depth discussion of the most recent scientific and technological applications in functional meat products. Many meat science and technology books available on the market describe meat chemistry, properties and basic science with only a rudimentary understanding of meat processing, functional meat products development and applications. Therefore, this work will be helpful for food industry professionals, policy makers, researchers, students, teachers and nutritionists and dieticians for a complete and up-to-date overview of functional meats processing and quality evaluation. *Nutritional Intervention for the Intestinal Health of Young Monogastric Animals* Sung Woo Kim, Rajesh Jha, 2021-04-30 **Sustainable Protein Sources** Sudarshan Nadathur, Janitha P.D. Wanasundara, Laurie Scanlin, 2023-11-17 *Sustainable Protein Sources: Advances for a Healthier Tomorrow* Second Edition explores alternative proteins including plant, fungal, algal and insect proteins that can take the place of meat as sustainable sources to satisfy human protein needs. This revised edition presents the benefits of plant and alternative protein consumption including those

that benefit the environment population and consumer trends and contains new chapters on potato protein faba bean chickpea and coconut Organized by protein chapters also cover cereals and legumes oilseeds pseudocereals fungi algae insects and fermentation derived dairy and meat proteins paying particular attention to the nutrition uses functions benefits and challenges of each The book also explores ways to improve utilization and addresses everything from consumer acceptability methods of improving the taste of products containing these proteins and ways in which policies can affect the use of alternate proteins In addition the book addresses sustainable protein as a pathway to securing the food supply and considers regenerative versus extractive agriculture alongside new methods in farming and water usage Introduces the need to shift from animal derived to plant based protein and fermentation derived proteins Discusses nutritive values of each protein source and compares each alternate protein to more complete proteins Provides an overview of production including processing protein isolation use cases and functionality

*Algal Technologies for Wastewater Treatment and Resource Recovery* Raul Muñoz,Hardy Temmink,Anthony M. Verschoor,Peter van der Steen,2019-07-26 Over 80% of globally produced wastewater receives little or no treatment before it is disposed into the environment Therefore it is urgent to develop new wastewater treatment technologies that are sustainable in the broad sense of the word i e not only produce high quality effluents but also minimise energy expenses recover energy and nutrients and apply technology that is appropriate in relation to the availability of skilled personnel This book compiles the main outcomes of recent efforts to improve the design of waste stabilisation ponds and confirms the superior performance of high rate algal ponds as a result of process intensification Anaerobic digestion devoted to biogas production continues to be the preferred strategy for the energy valorisation of the algal biomass co digestion with multiple high C N ratio substrates gathering significant attention over the past years The potential of algal biomass as a biosorbent for heavy metal removal Cu Ni F maintains its share in the research field of water bioremediation while research on nutrient removal has focused on providing new insights on the mechanism of nitrogen and phosphorus removal from wastewater in algal bacterial systems Finally it is worth noticing that breakthroughs in complementary fields of research such as nanotechnology or lighting technology are gradually being implemented in algal biotechnology with new products such as nanoparticles for water disinfection or photobioreactors illuminated by low intensity LED panels In Focus a book series that showcases the latest accomplishments in water research Each book focuses on a specialist area with papers from top experts in the field It aims to be a vehicle for in depth understanding and inspire further conversations in the sector

**Measuring Diets and Food Choice in the Context of a Changing World** Winnie Bell,Christine Blake,Shauna Downs,2025-08-06 Historically research in low and middle income countries has been focused on what people consume with less attention to how and why people choose to consume the foods that they do As

incomes rise and local food environments undergo rapid changes providing consumers with a wider array of options at competitive prices understanding the underlying drivers of food choice including the preferences and values that underpin them has become increasingly important In recent years there have been renewed efforts to understand the drivers of food choice in the context of changing food environments and broader food system and how these drivers link with food consumption The goal of this Research Topic is to look beyond dietary consumption what people eat by considering more holistically the various drivers of food choice how and why people eat the foods they do to better understand what underpins individual decisions Ultimately by understanding why people make the choices they do especially when situated in the local food environment and or broader food system we can identify important entry points for behavior change interventions develop a better understanding about the role of food safety in food choice decisions improve the environment climate and food systems through improved knowledge on the drivers of food choice and learn about how changing livelihoods shifts dynamics related to food choice amongst other important research tied to drivers of food choice

**Extracts From Plants and Other Natural Sources: Application, Characterization, Optimization, and Their Use** Tomislav Tosti, Saša Đurović, Yulia Smyatskaya, 2025-01-28 In the last decades natural compounds attract much of the attention of the scientific community because of the wide range of biological activity The possibility of changing the synthetic compounds for natural ones in food products was and still is one of the main goals of many studies in this field For this purpose different extraction techniques have been developed followed by the development of many analytical instruments and methods for the detection identification and quantification of isolated natural compounds Isolation of the natural compounds became a challenging problem of great importance since the natural matrix is a highly complex mixture of different compounds
