

A dramatic landscape photograph featuring a narrow, sandy path that leads from the foreground into a dark, rocky gorge. The path is illuminated by a warm, golden light, likely from a low sun, which creates a strong reflection on the wet sand. The gorge walls are steep and rugged, with some vegetation visible on the left. In the background, the path opens up to a view of the ocean under a cloudy sky. The overall mood is contemplative and inspiring.

Energy-Climate Continuum Antoine Bret, 2014-07-23 This book puts the debates about the energy climate continuum on a scientific ground It is a must read for everyone who wants to understand how intimately the energy and climate debates are linked to each other and who wants to participate in these omnipresent discussions Antoine Bret explains in his book how fossil fuels became indispensable for our society He carefully explains how and why this impacts the earth's climate And he points out that all available fossil fuels will sooner or later be used up Therefore he introduces and discusses the alternatives which are currently considered The book is divided into three parts The first part explains the problem and where we stand today the second part critically discusses possible elements of solution The third part illustrates historic case studies containing both warning as well as encouraging examples of societies at turning points This book is a careful introduction to these topics The basic science behind the problem and the debates are introduced in an understandable and nicely readable fashion Facts are illustrated with simple back of the envelope calculations providing a good feeling for orders of magnitudes A rich appendix provides additional background information for the interested readers In this way the book can even be a valuable resource for introductory university courses in physics climate science natural science and many more subjects This book is a real conversation starter and can be recommended to everyone specialist or non specialist who wants to understand the actual energy climate debates and maybe even involve **Sensory Transformations** Helmi JärviLuoma, Lesley

Murray, 2023-04-07 This book offers original insights into cultural transformations of the sensory with particular emphasis on environments and technologies articulating a special moment in the sensory history of urban Europe as people's relationship with their environment is increasingly shaped through digital technologies It is a much needed addition to Sensory Studies

literature with its firmly grounded empirical and theoretical perspectives. It provides radical and impactful food for thought on sensory engagements with urban environments. After reading the book, the reader will have a profound understanding of the original methodology of sensobiographic walking as well as transdisciplinary and transgenerational ethnographies in different cultural contexts in this case three European cities. The book is aimed at a large audience of readers. It is equally useful for social and human scientists and students finalizing their MA degrees or working on their doctoral or post doctoral work and essential reading for environmental planners, youth workers, city planners and architects among others.

Shattered Pictures of Places and Cities in George Santayana's Autobiography Graziella Fantini, 2011-11-28

Shattered Pictures of Places and Cities se adentra por las páginas autobiográficas filosóficas y narrativas más relevantes de George Santayana discurrendo por sus viajes y geografías físicas en paralelo a sus viajes y geografías morales. Es un intento de ir más allá de la reflexión entorno a los orígenes biográficos del filosofar que se recupere una indagación sobre su habitar el lenguaje y el arte. Santayana reconsidera los fundamentos del arte de la memoria clásica en su autobiografía para formular una nueva propuesta estética donde el arte y la vida se funden y se confunden estimulándose recíprocamente. Hila una filosofía del viaje y del lugar donde se privilegia una noción del habitar que ilumina nuestra condición de humanas en la vida y en el pensamiento y nuestra trágica estable inestabilidad en este mundo.

Mobile Robot Localization and Map Building Jose A. Castellanos, Juan D. Tardós, 2012-12-06 During the last decade many researchers have dedicated their efforts to constructing revolutionary machines and to providing them with forms of artificial intelligence to perform some of the most hazardous, risky or monotonous tasks historically assigned to human beings. Among those machines, mobile robots are undoubtedly at the cutting edge of current research directions. A rough classification of mobile robots can be considered on the one hand, mobile robots oriented to human-made indoor environments; on the other hand, mobile robots oriented to unstructured outdoor environments which could include flying oriented robots, space oriented robots and underwater robots. The most common motion mechanism for surface mobile robots is the wheel-based mechanism adapted both to flat surfaces found in human-made environments and to rough terrain found in outdoor environments. However, some researchers have reported successful developments with leg-based mobile robots capable of climbing up stairs although they require further investigation. The research work presented here focuses on wheel-based mobile robots that navigate in human-made indoor environments. The main problems described throughout this book are Representation and integration of uncertain geometric information by means of the Symmetries and Perturbations Model (SPmodel). This model combines the use of probability theory to represent the imprecision in the location of a geometric element and the theory of symmetries to represent the partiality due to characteristics of each type of geometric element. A solution to the first location problem, that is the computation of an estimation for the mobile robot location when the vehicle is completely lost in the environment. The problem is formulated as a search in an interpretation tree using efficient matching algorithms and geometric constraints to

reduce the size of the solution space The book proposes a new probabilistic framework adapted to the problem of simultaneous localization and map building for mobile robots the Symmetries and Perturbations Map SPmap This framework has been experimentally validated by a complete experiment which profited from ground truth to accurately validate the precision and the appropriateness of the approach The book emphasizes the generality of the solutions proposed to the different problems and their independence with respect to the exteroceptive sensors mounted on the mobile robot Theoretical results are complemented by real experiments where the use of multisensor based approaches is highlighted
