**Alcohol Intoxication and Withdrawal - IIib** Milton M. Gross, 2013-03-09 Dr Milton M Gross the editor of these volumes died on July 29 1976 after a brief illness As chairman of the section on Biomedical Research in Alcoholism of the I C A A he had planned and brought to fruition the international Symposium on Alcohol Intoxication and Withdrawal which had taken place in Lausanne the month before He was particularly proud of the distinguished group of scientists he had helped to assemble and was eagerly looking forward to the publication of these proceedings which he hoped would extend our understanding of the phenomenology of alcoholism Milton Gross was a most unusual man in the extent and range of his activities and accomplishments He was a certified psychiatrist and psychoanalyst a recognized clinical researcher the author of more than fifty scientific papers and the editor of three important volumes on alcohol intoxication and withdrawal He was extremely active in the scientific world of alcoholism as planner and coordinator of three international conferences as chairman of the section on Biomedical Research of the I C A A and as a member of a W H O Task Force on Alcoholism In addition he was very active in a variety of scientific and service committees in national and local organizations

**Research Advances in Alcohol and Drug Problems** Yedy Israel, Frederick B. Glaser, Harold Kalant, Robert E. Popham, Wolfgang Schmidt, Reginald G. Smart, 2013-11-11 Over the last decade the world has experienced a growing interest in problems associated with the nonmedical use of drugs This interest has corresponded to a real growth in the extent diversity and social impact of the use of alcohol and drugs in many societies As a result the amount of research and writing on the subject of drug problems has greatly increased and it has become very difficult for one individual to keep up with all the relevant literature There is thus an acute need in the field for critical reviews that assess current developments and the present series is intended to fill this need The series is not to be an annual review in the usual sense The aim is not to cover all the work reported during the preceding year in relation to a fixed selection of topics Rather it is to present each year evaluative papers on topics in which enough recent progress has been made to alter the general scope in a particular area Owing to the multidisciplinary nature of problems of drug use and dependence the papers published in each volume will be drawn from several disciplines However some volumes may be devoted to one particular problem with individual reviews and papers examining various aspects of it The composition of the editorial board and the international advisory board reflects these objectives The editors are members of the senior scientific staff of the Addiction Research Foundation of Ontario

*Recent Developments in Alcoholism* Marc Galanter, 2013-11-22 Each topic is covered in sufficient depth currency and clarity to be of value to the neophyte and the seasoned researcher clinician American Journal of Psychiatry from a review of a previous volume The current volume addresses a range of issues across this diverse field including the effects on society physiology and biochemistry clinical pathology and trends in treatment

Alcohol Intoxication and Withdrawal—IIia Milton M. Gross, 1977-01-10 He was extremely active in the scientific world of alcoholism as planner and coordinator of three

international conferences as chairman of the section on Biomedical Research of the I C A A and as a member of a W H O Task Force on Alcoholism In addition he was very active in a variety of scientific and service committees in national and local organizations His interests were by no means purely scientific He was a serious collector of African and pre Columbian artifacts and was considered highly knowledgeable in each of these areas Yet these extensive commitments did not prevent him from spending a great deal of time with his family and friends for whom he always showed the greatest consideration He had a tremendous capacity for living which was manifest in his warmth and good humor As long standing friends and collaborators of Milton Gross we have undertaken to complete the publication of these volumes

Membrane Toxicity M. W. Miller, 2012-12-06 Research on the study of membrane toxicity has advanced a great deal in a relatively short period of time prompting scientists to re examine the problems associated with carriers receptors and reactors to toxic substances This book presents current research on the responses of membranes to toxic substances both by direct observation of macromolecules reacting with these substances and by inference from data on the biochemical responses of cells and cell fractions Two basic areas of membrane toxicity are analyzed by a large number and variety of scientists in this field The first area is the effect of various toxic substances on membrane structure and function The second area is where the membrane serves as the site of rate limiting step of the transport of various toxic substances The aim of the book is to evaluate present concepts of membrane structure and function in relation to exposure to environmental toxicants The book is divided into five sessions 1 Xenobiotics and Membrane Transport 2 Cellular Responses to Toxins 3 Effects of Membranes and Receptors 4 Modification of Membrane Function by Toxicological Agents 5 Toxic Chemicals as Molecular Probes of Membrane Structure and Function Each paper is generally concluded by an edited discussion which contains many useful and interesting additional insights in each subject area

*The Alcoholism Problems* Sidney Cohen, 1983 The current issues and controversies about beverage alcohol and its potential disorders have been selected for consideration in this volume Not all of the short essays are problem oriented Some were written because new and pertinent knowledge has recently come forth

*Mucus in Health and Disease* Dennis Parke, 1977-09-01 Sir Francis Avery Jones 149 Harley Street London W1N 2DE U K This first international symposium on Mucus in Health and Disease brought together medical scientists physiologists pharmacologists physicians surgeons gynaecologists ophthalmologists anatomists biologists medical engineers and biochemists a spectrum which indicates the wide field of interest in mucus both in health and in disease The idea for the meeting came from Dr S Gottfried whose researches led to the development of carbenoxolone a substance which stimulates mucus production and in this way favours the healing of peptic ulcers The idea was enthusiastically welcomed by Professor Dennis Parke and he and Mr Max Elstein have been the dynamo behind the meeting The opening keynote address by Professor Clamp set the scene for

the Symposium painting a broad canvas and highlighting the main features We cannot do without mucus irritating though it may be if there is too much or too little and in so many systems of the body it plays a vital role For the first time the specialists in different systems of the body have had the opportunity of coming together and discussing their special problems a cross fertilisation which proved to be most valuable not only for one another but also for the medical scientists who had been closely concerned with the chemistry and physical properties of mucus

**The Pharmacology of Alcohol and Alcohol Dependence** Henri Begleiter, Benjamin Kissin, 1996 This is a comprehensive review of the pharmacological effects of alcohol and the mechanisms underlying the pathogenesis of alcoholism The book draws on general pharmacology neuropharmacology and alcohol studies to explore its theme The second volume in the ALCOHOL AND ALCOHOLISM series it focuses on the pharmacologic mechanisms underlying the development of alcoholism The first section on basic pharmacology is concerned with those aspects that are common to all of alcohol's effects These include pharmacokinetics general metabolism and cross tolerance The second section on neuropharmacology describes the effects of alcohol on various brain functions including circulation and metabolism The third section provides an in depth review of the neurobiology of physical dependence withdrawal and physiological tolerance The book as a whole gives a comprehensive and authoritative picture of the complex pharmacologic actions of alcohol particularly on the nervous system For clinicians and researchers in the field of alcohol and alcoholism it will serve as a fundamental reference

**Pharmacology of the Eye** M.L. Sears, 2012-12-06 Roots of the theory and practice of ocular pharmacology may be traced to the ancient Mesopotamian code of Hammurabi and then to several papyri reflecting the clinical interests of the Egyptians The evolution of its art and science was irregularly paced until the nineteenth century when Kohler in 1884 proved the anesthetic effect of cocaine on the cornea and when Fraser Laquer Schmiedeberg Meyer and others studied the pharmacology of the autonomic nervous system by way of observations of the pupil Advances in the past few decades have been nothing short of explosive How can the student physician or basic research scientist stay in touch with these electrifying studies To help with the answer to this question the authors set as their goal the development of increased understanding so that the student research scientist and ophthalmologist can cope with the latest discoveries The authors want to narrow what appears to be an ever increasing gap between basic science and ophthalmology The basic aspects of pharmacology have been presented in light of the natural physiology In this regard while distinctions among endogenous mechanisms drug effects and the pathogenesis of disease are to be separately recognized appreciation must be given to the concept that both the desirable and unwanted manifestations or functions caused by either disease or drugs must very often represent a quantitative change in normal metabolic pathways

**Biological Effects of Alcohol** Henri Begleiter, 2014-11-14 The disease of alcoholism has long been a major health problem which affects significant proportions of the populations of various countries It is now apparent that legal and moral sanctions have not provided a sufficient impetus to arrest this rampant problem Therefore it is evident that the approach to this international health problem must rely on the development of efficacious prevention and treatment techniques If the treatment and prevention of alcoholism is to be based on the rational assessment of the disease it is imperative that we understand the complex determinants of this disease The elements that initiate and perpetuate this addictive process must be examined and elucidated Because this disease appears to involve biological psychological and sociological factors the need for multidisciplinary research is of the utmost importance Indeed it is imperative that research findings obtained in one area or discipline be made available to researchers in other disciplines A better understanding of the factors which contribute to alcohol related problems can be achieved by studying the agent that is essential for the expression of the disease process This can be accomplished by examining the acute or chronic effects of that agent upon a number of biochemical physiological or behavioral systems This international conference was organized to enhance communication among investigators from different disciplines working on different aspects of alcohol related problems and alcoholism The proceedings of this international symposium represent the most recent findings in these areas of research The topics range from biophysical processes to complex cognitive processes It is hoped that findings from each discipline can challenge and stimulate the others Many papers in this publication present new data and novel contributions to the alcoholism literature Indeed the high qualities of the papers are tributes to the dedication and high scientific standards manifested by the outstanding participants I wish to express my gratitude to the individuals who chaired the various sessions These scientists played a most critical role in the selection of participants and in the conduct of the symposium These international symposia have been going on since 1972 and have always been part of the meetings sponsored by the

International Council of Alcoholism and Addictions      **Protein Crosslinking** Mendel Friedman, 2013-11-11 The word crosslinking implies durable combination of usually large distinct elements at specific places to create a new entity that has different properties as a result of the union In the case of proteins such crosslinking often results in important changes in chemical physical functional nutritional and biomedicinal properties besides physical properties simply related to molecular size and shape Nucleic acids carbohydrates glycoproteins and other biopolymers are correspondingly affected Since proteins are ubiquitous the consequences of their crosslinking are widespread and often profound Scientists from many disciplines including organic chemistry biochemistry protein chemistry food science nutrition radiation biology pharmacology physiology medicine and dentistry are therefore very much interested in protein crosslinking reactions and their implications Because protein crosslinking encompasses so many disciplines in organizing the Symposium on Nutritional and Biochemical Consequences of Protein Crosslinking sponsored by the Protein Subdivision of the Division of Agricultural and Food Chemistry of the American Chemical Society I sought participants with the broadest possible range of interests yet with a common concern for theoretical and practical aspects of protein crosslinking An important function of a symposium is to catalyze progress by bringing together ideas and experiences needed for interaction among different yet related disciplines To my pleasant surprise nearly everyone invited came to San Francisco to participate      **Parkinson's Disease** F.

Messiha, 2013-03-09 These Proceedings are the outcome of the First Tarbox Parkinson's Disease Symposium held October 14-16 1976 at the South Park Inn in Lubbock Texas The Symposium was sponsored by the Department of Pharmacology and Therapeutics and the Tarbox Parkinson's Disease Institute of the Texas Tech University School of Medicine at Lubbock The Tarbox Parkinson's Disease Institute was established in 1973 with funds appropriated by the State of Texas and is dedicated to research patient care and educational activities related to Parkinson's disease The Institute is named after Mr Elmer L Tarbox who recently served the Lubbock area as a Representative to the Texas Legislature and is himself a parkinsonian patient Mr and Mrs Tarbox attended the Symposium as honored guests The First Tarbox Parkinson's Disease Symposium was devoted to both basic and clinical aspects of Parkinson's disease with an emphasis on discussion of drug therapy This discussion focused not only on readily available drugs such as levodopa but also on new investigational drugs such as bromocriptine Thanks are especially due to Thelma Saunders and the office staff of the Department of Pharmacology and Therapeutics Texas Tech University School of Medicine for their excellent service in producing camera ready copy for the Publisher Thanks are also due to Fathy S Messiha Program Chairman to the other committee members and to the staff of the Office of Continuing Education and Faculty Development The Symposium could not have succeeded without their help

**Hypothalamic Peptide Hormones and Pituitary Regulation** John Porter, 2012-12-06 The proceedings of a workshop conference are presented in this volume entitled Hypothalamic Peptide Hormones and Pituitary Regulation The workshop was held in Wilson Hall on the campus of the National Institutes of Health Bethesda Maryland during the days of November 1

2 1976 and is the most recent of three symposia on neuroendocrinology that have been sponsored by the National Institutes of Health The first one was held on December 6 8 1961 in the New Everglades Hotel at Miami Florida During the first meeting much emphasis was given to the anatomical and physiological basis for the fledgling science of neuroendocrinology The proceedings of that symposium were published under the title of Advances in Neuroendocrinology A V Nalbandov ed University of Illinois Press Urbana Illinois 1963 The second workshop was held on January 8 11 1969 in the Arizona Inn at Tucson Arizona and was unique in several respects It was evident to the participants that definitive identification and the determination of the chemical structure of at least one hypothalamic releasing factor was at hand see Workshop Conference on Bioassay and Chemistry of the Hypophysis tropic Hormones of the Hypothalamus Critical Evaluation i J Meites ed The Williams and Wilkins Co Baltimore Maryland 1970 Much of what was presented at the second workshop was dedicated to methods of bioassay of the various releasing factors

**Comparative Endocrinology of Prolactin** Horst-Dieter Dellmann, 2013-03-09

The selection of prolactin as the subject of the Midwest Conference on Endocrinology was not only dictated by the recent advances in prolactin research but also by the long tradition in that particular area of Endocrinology in the laboratory of C W Turner at the University of Missouri Therefore it seems only appropriate that these proceedings of the Tenth Midwest Conference on Endocrinology are dedicated to the memory of this scientist deceased in August 1975 before completion of this volume whose pioneer investigations have contributed substantially to the advancement of our knowledge in many areas of Endocrinology and who played a major role in the early phases of prolactin research This volume contains a review of the early studies in Turner's laboratory and the latest results obtained by some of the leading research workers in this area and should be a fitting memory to C W Turner Some of the manuscripts printed here were prepared after the conference was held and include material of more recent origin Much of the delay in publication was due to the length of time devoted to preparation of these manuscripts To the other authors and participants and to Plenum Press we express our appreciation for their patience and cooperation We also wish to thank Mrs

**Atherosclerosis** G. Manning, 2013-03-09

The International Workshop Conference on Atherosclerosis was held at the University of Western Ontario London Ontario Canada September 1 3 1975 This book does not represent in a strict sense the entire proceedings of the above Workshop Conference but does reflect largely the format and the essential content of the scientific sessions Thus each of the three Sections of the book is comprised of the summarized presentations either at the Plenary Sessions Section I Proffered Papers Section II or Workshops Section III Section I comprises all the presentations of the Plenary Session on September 1 and the first three presentations at the Plenary Session on the last day of the Conference September 3 The remaining two addresses of the latter Session Resume of Workshop Conference and Closing Remarks follow the Section III at the end of the book Sections II and III are subdivided into Chapters which correspond to the individual Sessions of Proffered Papers and Workshops respectively To facilitate the orientation particularly for those who attended the Workshop Conference a Summary Table of

all Sessions of Proffered Papers designated as Chapters in this book precedes Section II and a similar Summary Table of Workshops also designated as Chapters precedes Section III The Tables include in addition the names of both Chairmen of each Session The Chairmen whose names do not appear on either Summary Table are those who chaired the two Plenary Sessions i e     Avian Immunology A. Benedict, 2012-12-06 The ontogeny of lymphoid cells seems the most appropriate place to start The early events in T and B cell ontogeny are still confusing There seems to be no agreement on the data and on the semantics of the question of progenitor vs stem cells Nevertheless we are beginning to understand more about progenitor cells which are committed to particular cell lines and about stem cells in the sense of having almost unlimited capability of giving rise to undifferentiated progeny An important future development will be to determine the nature of the substances that attract stem cells and which are produced by specialized thymus epithelium and perhaps by the bursa The way stem cells recognize these signals is an important question to answer Not predictable from mammalian models has been the observation that there is a lack of cells called into the bursa even before the signal for entry of stem cells has been shut off A likely model suggested that after a certain point in development there were no longer any cells capable of migrating into the bursa and becoming B cells A fascinating possibility is the suggestion that a cell comes into the bursa is not committed then can still wander into the thymus This cell does not appear to have B cell characteristics that is immunoglobulin is not expressed on its surface     Alcohol and Interpersonal Violence Susan Ehrlich Martin, 1993
